Appendix 3 - Glossary Of Terms	493
Appendix 3 - Glossary Of Terms About Comodo	

1. Introduction to Comodo Internet Security

Overview

Comodo Internet Security 6.3 offers 360° protection against internal and external threats by combining a powerful antivirus, an enterprise class packet filtering firewall and an advanced host intrusion prevention system called Defense+.

When used individually, each of the Antivirus, Firewall and Defense+ components delivers superior protection against their specific threat challenge. When used together as a full suite they provide a complete 'prevention, detection and cure' security system for your computer.

CIS is available in Premium (free), Pro and Complete editions. While the core CIS software is identical for all three versions, the Pro and Complete packages each offer a range of additional services. The software is designed to be secure 'out of the box' - so even the most inexperienced users need not have to deal with complex configuration issues after installation.

Comodo Internet Security - Key Features:

- Antivirus Proactive antivirus engine that automatically detects and eliminates viruses, worms and other malware. Apart from the powerful on-demand, on-access and scheduled scan capabilities, CIS 6.3 users can now simply dragand-drop items onto the home screen to run an instant virus scan.
- Firewall Highly configurable packet filtering firewall that constantly defends your system from inbound and outbound Internet attacks.
- Defense+ A collection of prevention based security technologies designed to preserve the integrity, security and privacy of your operating system and user data.
 - Behavior Blocker Authenticates every executable and process running on your computer and prevents them from taking actions that could harm your computer. Unrecognized processes and applications will be

auto-sandboxed and run under a set of restrictions so they cannot harm your computer. This gives untrusted (but harmless) applications the freedom to operate whilst untrusted (and potentially malicious) applications are prevented from damaging your PC or data.

- Host Intrusion Protection (HIPS) A rules-based intrusion prevention system that monitors the activities of all applications and processes on your computer. HIPS blocks the activities of malicious programs by halting any action that could cause damage to your operating system, system-memory, registry keys or personal data.
- Virtual Kiosk New to CIS 6.0 and above versions, the Virtual Kiosk is a sandboxed operating environment inside of
 which you can run programs and browse the Internet without fear that those activities will damage your real computer.
 Featuring a virtual keyboard to thwart key-loggers, home users will find the kiosk is ideally suited to sensitive tasks like
 online banking. Advanced users will appreciate the ability to run beta-software in an environment that will not upset the
 stability or file structure of their production systems
- Rescue Disk Built-in wizard that allows you to burn a boot-disk which will run antivirus scans in a pre-Windows / preboot environment.
- Additional Utilities The advanced tasks section contains links that allow you to install other, free, Comodo security products including Comodo Cleaning Essentials and KillSwitch.
- Comodo Dragon Fast and versatile Internet Browser based on Chromium, infused with Comodo's unparalleled level of Security.
- **GeekBuddy** 24x7 online support service in which Comodo technicians are ready to deal with any computer issues you may have over an instant messenger style interface.
- Secure Wireless Internet Connectivity (Complete version only) TrustConnect makes surfing the web safe from any public Wi-Fi location
- Comodo Guarantee (*Pro and Complete versions only*) If your computer becomes damaged as a result of malware and Comodo support services cannot return it to a working condition then well pay the costs of getting it repaired. Please see the End User License Agreement for full details.
- Online BackUp (Complete version only) Back-up your important data to Comodo's highly secure servers. Data is
 encrypted and can accessed only by the user from any Internet connected computer in the world (10GB storage
 space).

Guide Structure

This introduction is intended to provide an overview of the basics of Comodo Internet Security and should be of interest to all users.

- Introduction
 - Special Features
 - System Requirements
 - Installation
 - CIS Premium Installation
 - CIS Pro Installation and Activation
 - CIS Complete Installation and Activation
 - Activating CIS Pro/Complete Services after Installation
- Starting Comodo Internet Security
- The Main Interface
- Understanding Security Alerts

The next four sections of the guide cover every aspect of the configuration of Comodo Internet Security.

- General Tasks Introduction
 - Scan and Clean your Computer
 - Run a Quick Scan
 - Run a Full Computer Scan
 - Run a Rating Scan
 - Run a Custom Scan

COMODO Creating Trust Online*

- Instantly Scan Files and Folders
- Processing Infected Files
- Manage Virus Database and Program Updates
- Manage Quarantined Items
- View CIS Logs
- Manage CIS Tasks
- View Active Internet Connections
- Firewall Tasks Introduction
 - Allow or Block Internet Access to applications Selectively
 - Stealth your Computer Ports
 - Manage Network Connections
 - Stop all Network Activities
 - Advanced Firewall Settings
- Sandbox Tasks An Introduction

1.1. Special Features

Behavior Blocker

- Authenticates the integrity of every program before allowing it to load into your computer's memory
- Performs Cloud Based Behavior Analysis for immediate identification of Malware
- · Alerts you every time an unknown or untrusted applications attempts to run or install
- · Blocks Viruses, Trojans and Spy-ware before they can ever get onto your system
- Prevents unauthorized modification of critical operating system files and registry entries
- Includes auto-sandbox feature to completely isolate untrusted files from the rest of your computer

Host Intrusion Prevention System

- Virtually Bulletproof protection against root-kits, inter-process memory injections, key-loggers and more;
- Monitors the activities of all applications and processes on your computer and allows executables and processes to run if they comply with the prevailing security rules
- Blocks the activities of malicious programs by halting any action that could cause damage to your operating system, system-memory, registry keys or personal data.
- Enables advanced users to enhance their security measures by quickly creating custom policies and rulesets using the powerful rules interface.

Virtual Kiosk

An innovative sandboxed environment to run programs and browse the Internet isolated from your real computer. Applications and browsers run inside the kiosk leave no cookies or history behind on your real system, making it an extremely secure environment for Internet banking and online shopping.

- Prevents malicious websites from installing viruses malware, rootkits and spyware onto your computer and provides
 protection against hacking
- Features a virtual keyboard that allows you to securely enter user-names, credit card numbers and passwords without fear of key-logging software recording your physical keystrokes
- Enables advanced users to run beta-software in an environment that will not upset the stability or file structure of their production systems

Advanced Network Firewall Engine

The Firewall component of Comodo Internet Security offers the highest levels of perimeter security against inbound and outbound threats - meaning you get the strongest possible protection against hackers, malware and identity thieves. Now we've improved it again by adding new features like,

- Stealth Mode to make your PC completely invisible to opportunistic port scans;
- Wizard based auto-detection of trusted zones;
- Predefined Firewall policies allow you to quickly implement security rules;
- Diagnostics to analyze your system for potential conflicts with the firewall and much more.

Comprehensive Antivirus Protection

- Detects and eliminates viruses from desktops, laptops and network workstations;
- Performs Cloud based Antivirus Scanning;
- Employs heuristic techniques to identify previously unknown viruses and Trojans;
- Scans even Windows Registry and System Files for possible spyware infection and cleans them;
- · Constantly protects with real-time, On-Access scanning;
- Comodo AV shows the percentage of the completed scanning;
- · Rootkit scanner detects and identifies hidden malicious files and registry keys stored by rootkits;
- Highly configurable On-Demand scanner allows you to run instant checks on any file, folder or drive;
- · Comodo AV realtime scanning performance in Stateful mode;
- · Seamless integration into the Windows operating system allows scanning specific objects 'on the fly';
- Daily, automatic updates of virus definitions;
- Isolates suspicious files in quarantine preventing further infection;
- Built in scheduler allows you to run scans at a time that suits you;
- Simple to use install it and forget it Comodo AV protects you in the background.

Intuitive Graphical User Interface

- Advanced and Compact View summary screens gives an at-a-glance snapshot of your security settings;
- Easy and quick navigation between each module of the firewall, Antivirus and Defense+;
- Simple point and click configuration no steep learning curves;
- New completely redesigned security rules interface you can quickly set granular access rights and privileges on a global or per application. The firewall also contains preset policies and wizards that help simplify the rule setting process.

Comodo GeekBuddy (Pro, Complete versions only)

CIS Pro and Complete customers receive Comodo GeekBuddy - Live expert remote support for virtually all personal computer issues. Pro and Complete users benefit from the convenience of having a computer security expert on tap 24/7 to help them fix problems right in front of their eyes.

The services include:

- Virus & Malware Removal
- Internet and Online Identity Security
- Printer or Email Account Setup
- Software Activation
- General PC Troubleshooting
- Computer Power Setting Optimization
- Comodo Software Installation and Set up
- Comodo Account Questions.

Please visit http://www.geekbuddy.com/ for full product details.

Note: To use the GeekBuddy service on a continuous basis, you have to purchase the product at http://www.geekbuddy.com/, register and activate your account.

Comodo TrustConnect

Included with a Complete subscription, Comodo TrustConnect is a fast, secure Internet proxy service that makes surfing the web

safe -

- At Coffee shops, Hotels and Airports;
- At any other public Wi-Fi location;
- At your home location;
- For Enterprises with remote workers and road-warriors that need secure access to internal networks.

Comodo Dragon

Fast and versatile Internet Browser based on Chromium, infused with Comodo's unparalleled level of Security.

- Improved Privacy over Chromium
- Easy SSL Certificate Identification
- Fast Website Access
- Greater Stability and Less Memory Bloat
- Incognito Mode Stops Cookies, Improves Privacy
- Very easy to switch from your Browser to the Dragon

Comodo Internet Security - Extended Features

Highly Configurable Security Rules Interface

Comodo Internet Security offers more control over security settings than ever before. Users can quickly set granular Internet access rights and privileges on a global or per application basis using the flexible and easy to understand GUI. This version also sees the introduction of preset security policies which allow you to deploy a sophisticated hierarchy of firewall rules with a couple of mouse clicks.

Application Behavior Analysis

Comodo Internet Security features an advanced protocol driver level protection - essential for the defense of your PC against Trojans that run their own protocol drivers.

Cloud Based Behavior Analysis

Comodo Internet Security features cloud based analysis of unrecognized files, in which any file that is not recognized and not in Comodo's white-list will be sent to Comodo Instant Malware Analysis (CIMA) server for behavior analysis. Each file is executed in a virtual environment on Comodo servers and tested to determine whether it contains any malicious code. The results will be sent back to your computer in around 15 minutes.

Event logging

Comodo Internet Security features a vastly improved log management module - allowing users to export records of Antivirus, Firewall and Defense+ activities according to several user-defined filters. Beginners and advanced users alike are greatly benefited from this essential troubleshooting feature.

Memory Firewall Integration

Comodo Internet Security now includes the buffer-overflow protection original featured in Comodo Memory Firewall. This provides protection against drive-by-downloads, data theft, computer crashes and system damage.

'Training Mode' and 'Clean PC' Mode

These modes enable the firewall and host intrusion prevention systems to automatically create 'allow' rules for new components of applications you have decided to trust, so you won't receive pointless alerts for those programs you trust. The firewall learns how they work and only warn you when it detects truly suspicious behavior.

Application Recognition Database (Extensive and proprietary application safe list)

The Firewall includes an extensive white-list of safe executables called the 'Comodo Safe-List Database'. This database checks the integrity of every executable and the Firewall alerts you of potentially damaging applications before they are installed. This level of protection is new because traditionally firewalls only detect harmful applications from a blacklist of known malware - often-missing new forms of malware as might be launched in day zero attacks.

The Firewall is continually updated and currently over 1,000,000 applications are in Comodo Safe list, representing virtually one of the largest safe lists within the security industry.

Self Protection against Critical Process Termination

Viruses and Trojans often try to disable your computer's security applications so that they can operate without detection. CIS protects its own registry entries, system files and processes so malware can never shut it down or sabotage the installation.

Sandboxing as a security feature

Comodo Internet Security's new 'Virtual Kiosk' is an isolated operating environment for unknown and untrusted applications. Because they are virtualized, applications running in the sandbox cannot make permanent changes to other processes, programs or data on your 'real' system. Comodo have also integrated auto-sandboxing directly into the security architecture of CIS to complement and strengthen the Firewall, Defense+ and Antivirus modules.

Submit Suspicious Files to Comodo

Are you the first victim of a brand new type of spyware? Users can help combat zero-hour threats by using the built in submit feature to send files to Comodo for analysis. Comodo then analyzes the files for any potential threats and update our database for all users.

Enhanced Browser Privacy

PrivDog, a new browser extension that can be installed with CIS, improves your online privacy by detecting and blocking any 3rd party trackers or ad networks that are monitoring your activity while on a website. Supported browsers include Comodo Dragon, Comodo Ice Dragon, Google Chrome and Mozilla Firefox.

1.2. System Requirements

To ensure optimal performance of Comodo Internet Security, please ensure that your PC complies with the minimum system requirements as stated below:

Windows 8 (Both 32-bit and 64-bit versions) Windows 7 (Both 32-bit and 64-bit versions) Windows Vista (Both 32-bit and 64-bit versions)	 384 MB available RAM 210 MB hard disk space for both 32-bit and 64- bit versions Internet Explorer Version 5.1 or above
Windows XP (Both 32-bit and 64-bit versions)	 256 MB available RAM 210 MB hard disk space for both 32-bit and 64- bit versions Internet Explorer Version 5.1 or above

1.3. Installation

Before you install Comodo Internet Security, read the installation instructions carefully and also review the system requirements. Additional services and features such as activation of your GeekBuddy account and/or Comodo Guarantee are carried out after the base installation has been completed.

Please note - the CIS software itself is identical for all customers regardless of the package type. All versions (including free) include all security features, technologies and updates. The difference between the package types lies in the availability of additional services such as GeekBuddy, TrustConnect, Online Storage and the Comodo Guarantee. Activation of additional services is carried out after the base installation has been completed.

Note - Before beginning installation, please ensure you have uninstalled any other antivirus and firewall products that are on your computer. More specifically, remove any other products of the *same type* as those Comodo products you plan to install. For example, if you plan to install only the firewall then you do not need to remove 3rd party antivirus solutions and vice-versa. If you are installing full CIS (both FW and AV) then you need to remove both types of product if they are present on your system. Failure to remove products of the same type could cause conflicts that mean CIS will not function correctly. Users should consult their vendor's documentation for precise uninstallation guidelines, however the following rough steps will help most Windows users:

- Click the Start button to open the Windows Start menu
- Select Control Panel > Programs and Features (Win 8, Win 7, Vista); Control Panel > Add or Remove Programs (XP)
- Select your current antivirus or firewall program(s) from the list

COMODO Creating Trust Online*

- Click Remove/Uninstall button
- · Repeat process until all required programs have been removed

Click the links below for detailed explanations:

- CIS Premium Installation
- CIS Pro Installation
- CIS Complete Installation

1.3.1. CIS Premium - Installation

Note - Before beginning installation, please ensure you have uninstalled any other antivirus and firewall products that are on your computer. Click here to read the full note.

In order to install Comodo Internet Security - Premium, you need to download the setup file from http://www.comodo.com/home/download/download.php?prod=cis.

- Choose whether you want the 32 or 64 bit version of CIS then click 'download'
- If you are unsure which version you need, select the 32/64-bit Windows Installer. This executable contains BOTH 32
 and 64 bit installers. The setup routine will automatically detect which version of Windows you have and install the
 appropriate version. Please note, the Universal Windows Installer is a much larger download than the individual 32 or
 64 bit setup files.

After downloading the required Comodo Internet Security setup file to your local hard drive, double click on it the installation wizard.

Step 1 - Choosing the Interface Language

The installation wizard starts automatically and the 'Select the language' dialog is displayed. Comodo Internet Security is available in several languages.

COMODO Installer
Select the language
English (United States) - By COMODO
OK Cancel

 Select the language in which you want Comodo Internet Security to be installed from the drop-down menu and click 'OK'.

Step 2 - Installation Configuration

The installation configuration screen will be displayed.

COMODO Creating Trust Online*

- Please review and/or modify the settings in the dialog.
- If you click 'Customize Installer' then you can choose advanced options. These include which CIS components you
 wish to install, the ability to choose CIS installation path and other advanced CIS configuration settings.

Receive Comodo News and Notifications

Comodo Internet Security Premium is activated free of cost for lifetime usage. If you wish to sign up for news about Comodo products then enter your email address in the space provided. This is optional.

DNS Settings

Comodo Secure DNS service replaces your existing Recursive DNS Servers and resolves all your DNS requests exclusively through Comodo's proprietary Directory Services Platform. Comodo's worldwide network of redundant DNS servers provide fast and secure Internet browsing experience without any hardware or software installation.

In addition, Comodo's Secure DNS ensures safety against attacks in the form of malware, spyware, phishing etc., by blocking access to malware-hosting sites, by any program running in your system.

In this step of installation of Comodo Internet Security, the DNS settings of your computer can be changed automatically to direct to our DNS servers. You can disable the service at anytime and revert to your previous settings.

For more details on Comodo Secure DNS Service and to know how to enable or disable the service, refer to Appendix 2 Comodo Secure DNS Service.

To enable Comodo Secure DNS, select 'I want to enable added security while in the internet by change my DNS Servers to COMODO SecureDNS Servers'. Click the 'What is this' link to know more about Comodo Secure DNS servers.

Cloud Based Behavior Analysis

Any file that is identified as unrecognized is sent to the Comodo Instant Malware Analysis (CIMA) server for behavior analysis. Each file is executed in a virtual environment on Comodo servers and tested to determine whether it contains any malicious code. The results will be sent back to your computer in around 15 minutes. Comodo recommends users leave this setting enabled. Read the privacy policy by clicking the 'Privacy Policy' link.

Browser Homepage

Your default home page and search engine will be set to Yahoo!

Click the 'Next' button.

In the next screen, you can choose to install PrivDog and read the license agreements for CIS and PrivDog.

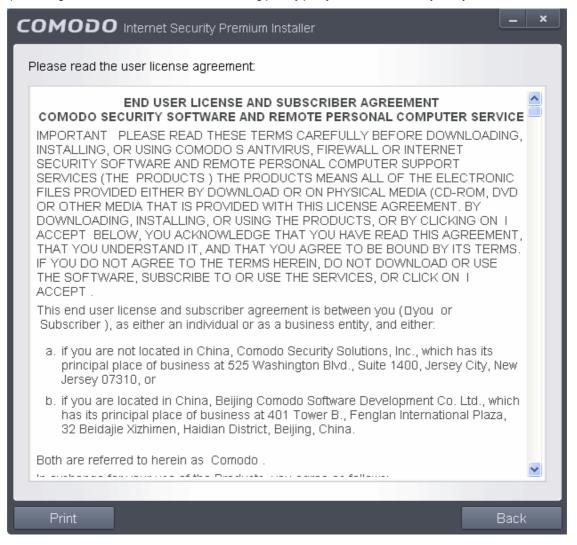

PrivDog

PrivDog is a browser extension that improves the transparency, privacy and speed of your online experience by automatically detecting and blocking processes that are attempting to track your online activity. Whenever you visit a website, PrivDog will display the number of privacy threats it has blocked in the top-right corner of your browser. Clicking the PrivDog icon will reveal a more detailed breakdown of the types of threats it has stopped, which can include advertising networks, 3rd party trackers, cookies, widgets and other data collection processes. The extension can also block all current banner ads in a webpage and replace them with safe and trusted ads. If you elect to install PrivDog, the extension will be automatically installed in any supported browsers detected on your system (Comodo Dragon, Comodo IceDragon, Google Chrome and Mozilla Firefox). You can remove the extension at any time from within the browser itself.

- Select the first option if you want to install PrivDog.
- If you select the first option, the second option allows you to choose to view only ads from AdTrustMedia in your browser.

End User License Agreements

Read the complete User License Agreements by clicking the 'License Agreement' links of Comodo and PrivDog respectively before proceeding with the installation. To read the PrivDog privacy policy link, click the Privacy Policy link next to it.

After reading the agreements, click the 'Back' button to return to the installation configuration screen.

Once back at the main installer screen, if you wish to configure advanced options, click 'Customize Installation'. Otherwise, click 'Agree and Install' to begin installation.

Customizing Installation

Clicking the 'Customize Installation' link opens an advanced options interface that enables you to choose which elements you would like to install, configure security popup alerts and choose the installation path. In order to obtain maximum protection, Comodo recommends that you uninstall any third party personal Firewall and Antivirus in your system and select all the components to get the full benefit of the product.

Select Components to Install (Click to go back to Step 2)

Click the 'Installation Options' tab to select the components to be installed.

- Install COMODO Firewall Selecting this option installs Comodo Firewall and Defense+ components. Deselect this
 option, if you already have third party Firewall protection activated in your computer system. Comodo Firewall
 installation is mandatory to qualify for the virus free guarantee.
- Install COMODO Antivirus Selecting this option installs Comodo Antivirus and Defense+ components. Deselect this
 option, if you already have a third party virus protection activated in your computer system. Comodo Antivirus
 installation is mandatory to qualify for the virus free guarantee.
- Install COMODO GeekBuddy Selecting this option installs GeekBuddy, a 24 x 7 remote support service in which Comodo experts can help you solve any computer related problems you may encounter. Refer to the section Comodo GeekBuddy for more details.
- Install COMODO Dragon Web Browser Selecting this option installs Comodo Dragon, a fast and versatile Internet browser based on Chromium technology and infused with Comodo's unparalleled level of security. Refer to the section Comodo Dragon for more details.

Configuration Options

Click the 'Configuration Options' tab to configure pop-up alert options.

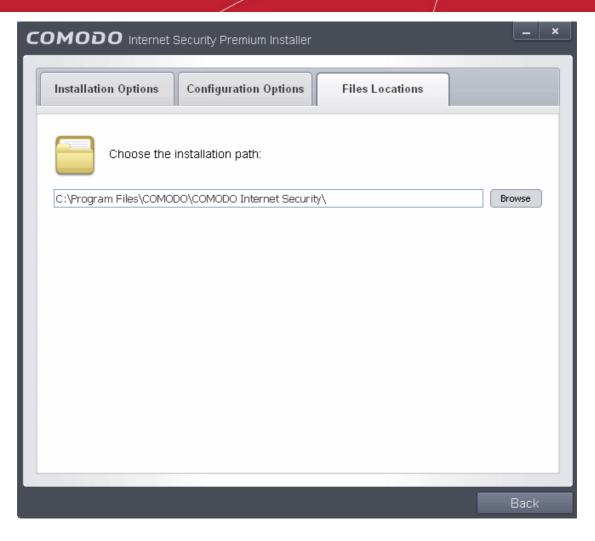

Do Not show alerts that request security decisions as much as possible - When this option is selected, CIS is
configured to automatically deal with most issues in a secure manner without raising a popup alert - thus minimizing
user intervention. Most users should leave this option at the default state of enabled. Advanced users wishing to gain
greater insight into CIS actions and/or to have more control over security decisions may wish to disable this option.

Choosing Installation Location

Click the 'Files Locations' tab to choose the installation path.

COMODO Creating Trust Online*

This screen allows you to select the folder in your hard drive for installing Comodo Internet Security. The default path is C:\Program Files\COMODO\COMODO Internet Security. If you want to install the application in a location other than the default location, click 'Browse' to choose a different location.

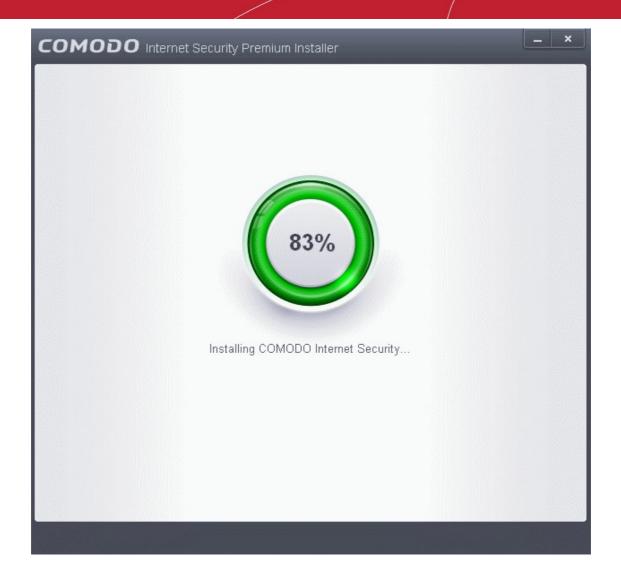

After customizing your installation, click the 'Back' button to return to the installation configuration screen.

• Once you are satisfied with your settings, click 'Agree and Install' to begin installation.

Step 3 - Installation Progress (Click to go back to Step 2)

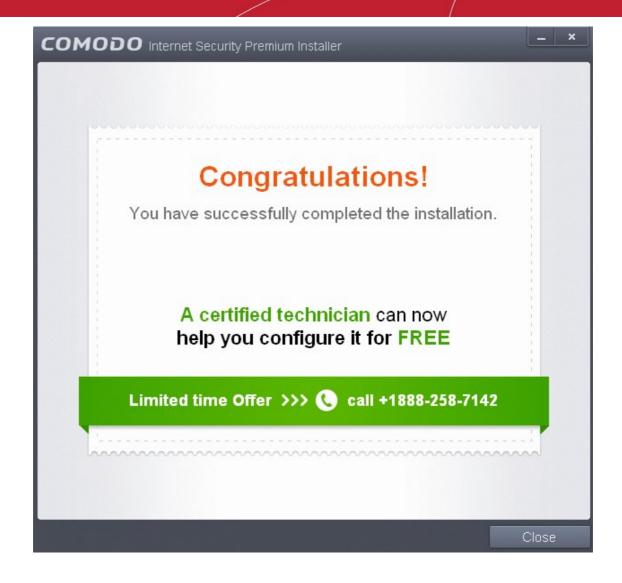

The installation progress will be displayed...

COMODO Creating Trust Online

... and on completion, the successfully completed dialog will be displayed.

Click the 'Close' button.

Step 4 - Restarting Your System

In order for the installation to take effect, your computer needs to be restarted.

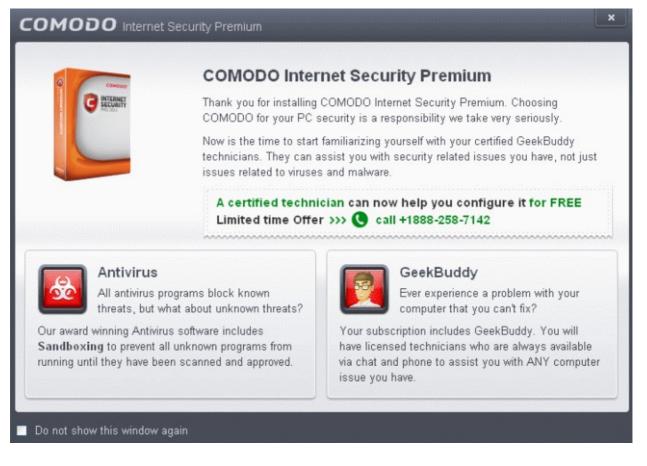

сом	ODO Internet Security Premium Installer
	You must restart your system for the configuration changes to take effect. Click 'Yes' to restart now or 'No' if you plan to manually restart later. Yes No

Please save any unsaved data and click 'Yes' to restart the system. If you want to restart the system at a later time, click 'No'.

Note: The installation will take effect only on the next restart of the computer.

Step 5 - After Restarting Your System

After restarting, a 'thankyou' screen will appear. This contains a summary of the components you chose to install as well as some friendly advice.

This screen will appear every time you start your system. If you do not want the screen to be displayed on every start up, select the check box 'Do not show this window again' before closing the window.

If your computer is connected to a home or work network, then you are prompted to configure it at the 'Network Detected!' dialog. At the top of the dialog, the connectivity mode will be displayed, whether wired or wireless.

COMODO Creating Trust Online

1.3.2. CIS Pro - Installation and Activation

Note - Before beginning installation, please ensure you have uninstalled any other antivirus and firewall products that are on your computer. Click here to read the full note.

Comodo Internet Security Pro 6.3 can be downloaded from http://www.comodo.com/home/download/download.php? prod=cis-pro after signing up for subscription and includes, Comodo Dragon, GeekBuddy and the Comodo Guarantee.

- · Choose whether you want the 32 or 64 bit version of CIS then click 'download'
- If you are unsure which version you need, select the 32/64-bit Windows Installer. This executable contains BOTH 32
 and 64 bit installers. The setup routine will automatically detect which version of Windows you have and install the
 appropriate version. Please note, the Universal Windows Installer is a much larger download than the individual 32 or
 64 bit setup files.

After downloading the required Comodo Internet Security setup file to your local hard drive, double click on the setup file to start the installation wizard.

Step 1 - Choosing the Interface Language

The installation wizard starts automatically and the 'Select the language' dialog is displayed. Comodo Internet Security is available in several languages.

	_ ×
Select the language	
English (United States) - By COMODO	*
ОК С	ancel

• Select the language in which you want Comodo Internet Security to be installed from the drop-down menu and click 'OK'.

Step 2 - Installation Configuration

The installation configuration screen will be displayed.

COMODO Creating Trust Online*

- Please review and/or modify the settings in the dialog.
- If you click 'Customize Installer' then you can choose advanced options. These include which CIS components you
 wish to install, the ability to choose CIS installation path and other advanced CIS configuration settings.

Receive Comodo News and Notifications

If you wish to sign up for news about Comodo products then enter your email address in the space provided. This is optional.

DNS Settings

Comodo Secure DNS service replaces your existing Recursive DNS Servers and resolves all your DNS requests exclusively through Comodo's proprietary Directory Services Platform. Comodo's worldwide network of redundant DNS servers provide fast and secure Internet browsing experience without any hardware or software installation.

In addition, Comodo's Secure DNS ensures safety against attacks in the form of malware, spyware, phishing etc., by blocking access to malware-hosting sites, by any program running in your system.

In this step of installation of Comodo Internet Security, the DNS settings of your computer can be changed automatically to direct to our DNS servers. You can disable the service at anytime and revert to your previous settings.

For more details on Comodo Secure DNS Service and to know how to enable or disable the service, refer to Appendix 2 Comodo Secure DNS Service.

To enable Comodo Secure DNS, select 'Change my DNS Servers to COMODO SecureDNS Servers. Click the 'What is this' link to know more about Comodo Secure DNS servers.

Cloud Based Behavior Analysis

Any file that is identified as unrecognized is sent to the Comodo Instant Malware Analysis (CIMA) server for behavior

COMODO Creating Trust Online

analysis. Each file is executed in a virtual environment on Comodo servers and tested to determine whether it contains any malicious code. The results will be sent back to your computer in around 15 minutes. Comodo recommends users leave this setting enabled. Read the privacy policy by clicking the 'Privacy Policy' link.

Browser Homepage

Your default browser home page and the search engine will be set as Yahoo!

Click the 'Next' button.

In the next screen, you can choose to install PrivDog and read the license agreements for CIS and PrivDog.

COMODO Internet Security Pro 2013 Installer	×
COMODO Internet Security Pro 2013 with GeekBuddy and Dragon	
I want to install PrivDog and block potentially malicious advertisements from reaching my computer by blocking all third party advertisement networks. What is this?	
✓ I want PrivDog to only show me AdTrustMedia ads. <u>What is this?</u>	
By clicking "Agree and Install" button, you agree to the User License Agreement(s):	
Comodo Internet Security <u>License Agreement</u> PrivDog <u>Privacy Policy</u> and <u>License Agreement</u>	1.1
Customize Installation < Back Agree and Install Cancel	

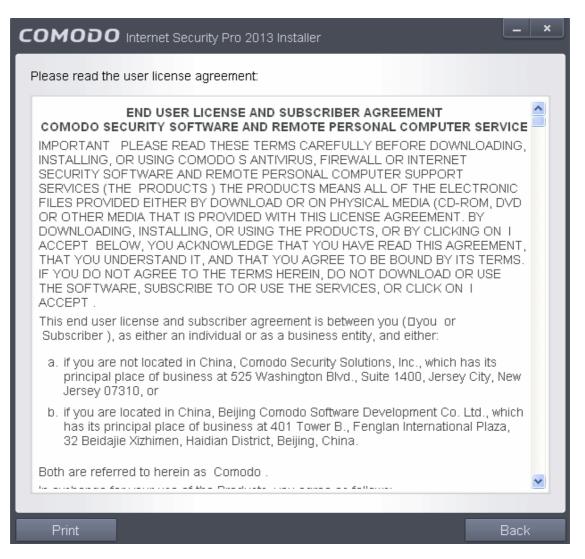

PrivDog

PrivDog is a browser extension that improves the transparency, privacy and speed of your online experience by automatically detecting and blocking processes that are attempting to track your online activity. Whenever you visit a website, PrivDog will display the number of privacy threats it has blocked in the top-right corner of your browser. Clicking the PrivDog icon will reveal a more detailed breakdown of the types of threats it has stopped, which can include advertising networks, 3rd party trackers, cookies, widgets and other data collection processes. The extension can also block all current banner ads in a webpage and replace them with safe and trusted ads. If you elect to install PrivDog, the extension will be automatically installed in any supported browsers detected on your system (Comodo Dragon, Comodo IceDragon, Google Chrome and Mozilla Firefox). You can remove the extension at any time from within the browser itself.

- Select the first option if you want to install PrivDog.
- If you select the first option, the second option allows you to choose to view only ads from AdTrustMedia in your browser.

End User License Agreement

Read the complete User License Agreement by clicking the 'User License Agreement' link before proceeding with the installation.

After reading the agreement, click the 'Back' button to return to the installation configuration screen.

Once back at the main installer screen, if you wish to configure advanced options, click 'Customize Installer'. Otherwise, click 'Agree and Install' to begin installation.

Customizing Installation

Clicking the 'Customize Installer' link opens an advanced options interface that enables you to choose which elements you would like to install, configure security popup alerts and choose the installation path. In order to obtain maximum protection, Comodo recommends that you uninstall any third party personal Firewall and Antivirus in your system and select all the components to get the maximum benefit from Comodo Internet Security Pro 2013.

Select the Components to Install (Click to go back to Step 2)

Click the 'Installation Options' tab to select the components to be installed.

If any threats are detected, they will be displayed and you can choose to take appropriate action from any of the drop-down fields in the screen and click 'Apply Selected Actions' button. Refer to the section '**Processing Infected Files**' for more details.

Important Note: After successful installation, you need to activate the license for using the product. In order to get your guarantee coverage and TrustConnect service enabled, you need to activate the license first.

- For full explanation on activation of license after installation of the product, refer to Activating Your License.
- For full explanation on activation of your guarantee, refer to Activating Your Guarantee Coverage.

1.3.4. Activating CIS Pro/Complete Services after Installation

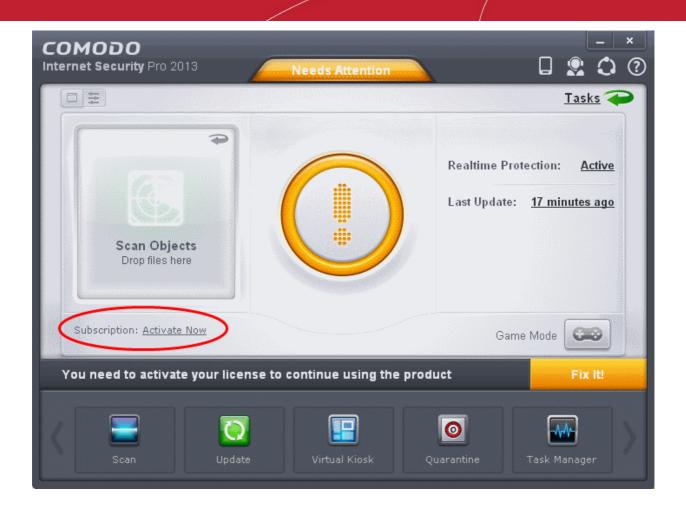

CIS Pro and CIS Complete should be activated after installation for contiuned use of the product. You will get alerts to activate the license if it has not been done so.

- Activating Your License;
- Activating Your Guarantee Coverage;
- Renewal of Your License.

1.3.4.1. Activating Your License

• Start the Comodo Internet Security application as explained in the section **Starting Comodo Internet Security**. **Step 1:** To activate your License, click 'Activate Now' beside 'Subscription' in the home screen.

COMODO Creating Trust Online*

The License Activation Wizard will start.

COMODO License Management	_ ×

1.3.4.2. Activating Your Guarantee Coverage

The Comodo Guarantee is available to customers of CIS Pro and CIS Complete versions. Before enabling guarantee coverage, customers should first have activated their licence. Full details on activating the license can be found in **Activating Your License** section.

 Please note that if you wish to use and activate the Comodo guarantee then you must have installed Comodo Internet Security (both Antivirus and Firewall components) and Comodo GeekBuddy. You must also have run and passed a Comodo Antivirus scan using the latest signature database. Please see the End User License Agreement (EULA) for full details.

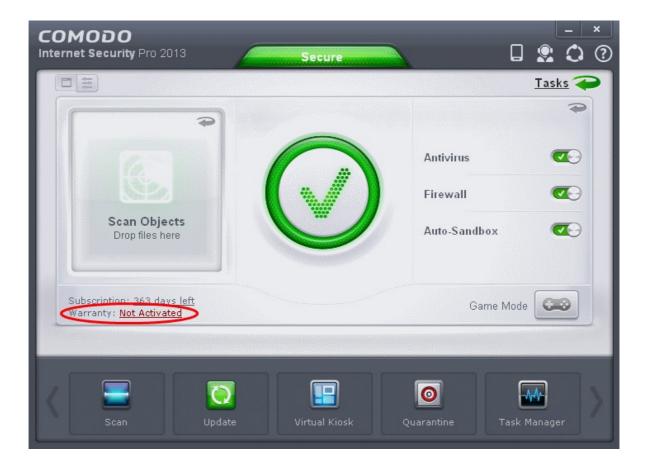

Limits: The guarantee is limited to the lesser of:

- The actual cost of the computer;
- An aggregate total of \$500 for all claims paid under a single license key, and
- The actual cost of a Comodo specified and authorized third party provider to repair the computer to an operating condition ('Guarantee Limit').
- The guarantee is limited to repairing the computer over the Internet to an operational state and excludes all
 claims for lost or expected profits, lost or corrupted data, lost or deleted work, or lost or damaged personal files.
 Comodo does not guarantee against the loss of any file or information. The guarantee is void if you breached this
 agreement, failed to follow the procedures described in this Section 3 of the EULA or failed to pay any fees
 applicable to your use of the Software.
- Full Terms and Conditions on the Comodo Guarantee Coverage can be read in Section 3 of CIS EULA (Step 2 of the Installation process for CIS Pro and Step 1 for CIS Complete).

Important Note: Before activating the guarantee, it is essential to run a full computer AV scan with the latest version of the Comodo Virus database in order to ensure that your system is eligible for the Guarantee coverage. Make sure that the virus database of your CIS installation has been updated to the latest one. The update status is indicated next to 'Last Update' in the 'Virus Defense' box of the CIS main interface and with a green tick mark and the text 'All Systems are active and running' in the lower left corner of the main interface. If your virus database is not up-to-date, click the link next to 'Last Update' in the 'Virus Defense' box to update to the latest version. Then run a full computer scan from the Antivirus Tasks interface of the CIS. For

more details on running an Antivirus Scan Click here.

Step 1: To activate your guarantee coverage, click 'Not Activated' beside 'Warranty' in the home screen.

A full system scan to remove all known viruses is a mandatory requirement if your computer is to be eligible for guarantee coverage. If this step has already been performed (and your system is clean), then the process moves to **step 2**.

Click 'Yes' to run a full computer scan. Refer to the section **Run a Full Computer Scan** for more details on scanning your full computer and cleaning the infected files. All the infections and threats identified during the scan should be cleaned for your computer to be qualify for the warranty.

Step 2: The next stage is to run the Guarantee Activation Wizard again.

 Click 'Not Activated' beside 'Warranty:' again. The Guarantee Activation Wizard will start and on completion the 'successfully activated' screen will be displayed.

COMODO Creating Trust Online

COMODO License Management	_	×
You have successfully activated your product. Continue		

Click 'Continue' to complete the activation wizard

Successfully activating your Guarantee will change the information displayed beside 'Warranty:' in the Home screen.

1.3.4.3. Renewal of Your License

In order to enjoy continuous services from Comodo after the license period of your CIS Pro/Complete has expired, you need to renew your License.

To renew or upgrade your license, click the 'Activate Now' link beside 'Subscription' on the CIS home screen (alternatively, click 'No. of days left').

The Product Activation Wizard will start.

COMODO License Management	_ ×
Activate License Enter your license key to activate your product	
In order to activate: Make sure you are connected to the Internet Enter your license key or <u>click here</u> to obtain one Activate the license and register your product License Key:	
	Activate

- Click the '<u>click here</u>' link. You will be taken to https://secure.comodo.com/home/purchase.php? afl=Comodo&rs=7&pid=9&cid=RkJEMUZENjMzQUM4RDIDNDE4MzBDQjc1NDIENUIzRkY&lid=&.
- Select your CIS Package.
- Select 'returning user' in the 'Sign-up Information' area, enter your login and password and complete the payment procedures.
- The License key will be sent to you by email. Activate your License using the new key to enjoy the continued services.

1.4. Starting Comodo Internet Security

After installation, Comodo Internet Security automatically starts whenever you start Windows and the CIS Widget will be displayed. In order to configure and view settings within Comodo Internet Security, you need to access the main interface.

There are 4 different ways to access the main interface of Comodo Internet Security:

- Windows Start Menu
- Windows Desktop
- Widget
- System Tray Icon

Start Menu

You can access Comodo Internet Security via the Windows Start Menu.

Click Start and select All Programs > Comodo > COMODO Internet Security > COMODO Internet Security.

	Paint-NÉT	
Notepad	m Android SDK Tools	🕨 🛅 IceDragon 🔸
	🥹 Mozilla Firefox	COMODO Internet Security
All Programs 👂	i Microsoft Silverlight	Dragon COMODO Internet Security
	🛅 соморо	🕨 🗑 GeekBuddy 🔸 🛊
	🛅 7-Zip	
ଣ start	😕 Adobe Reader 9	

Windows Desktop

Just double click the shield icon in the desktop to start Comodo Internet Security.

Widget

• Just click the information bar in the widget to start CIS.

You can also view other details in the widget such as inbound and outbound traffic, number of tasks running, shortcuts to common CIS tasks and browsers and links to social media sites Twitter and Facebook. Refer to the section 'The Widget' for more details.

CIS Tray Icon

Just double click the shield icon to start the main interface.

By right-clicking on the tray icon, you can access short cuts to selected settings such as enabling or disabling Antivirus real-time scan, Firewall, Behavior Blocker, Widget, Game Mode option and switch the CIS to Advanced or Compact View.

Game Mode - Switches CIS to Game Mode to enable you to play your games without any interruptions from various alerts in your computer. The operations that can interfere with users' gaming experience are either suppressed or postponed.

In game mode:

- Defense+/Firewall alerts are suppressed as if they are in training mode;
- AV database updates and scheduled scans are postponed until the gaming is over;
- Automatic isolation of unknown applications and real-time virus detection are still functional.

Deactivate Game Mode to resume alerts and scheduled scans.

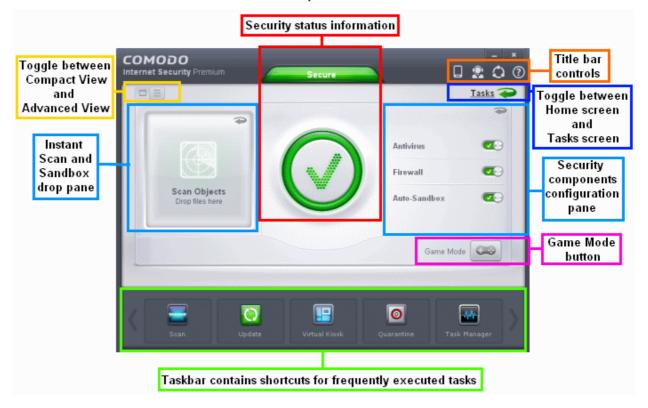

Widget - Click here for more details on CIS Widget.

Refer to the section "The System Tray Icon for more details.

1.5. The Main Interface

The CIS interface has been designed to be as clean and informative as possible while letting you carry out any task you want with the minimum of fuss. Clicking the curved arrowed on the upper right lets you switch between the **home screen** and the more advanced **tasks interface**. You can instantly run a virus scan on a file or folder by dragging it into the scan box while 'Game Mode' means nothing will interrupt you while you play a full screen game. The Task Bar at the bottom of the home screen allows one-click access to important features such as the antivirus scanner, the Virtual Kiosk, the update checker and the CIS Task Manager.

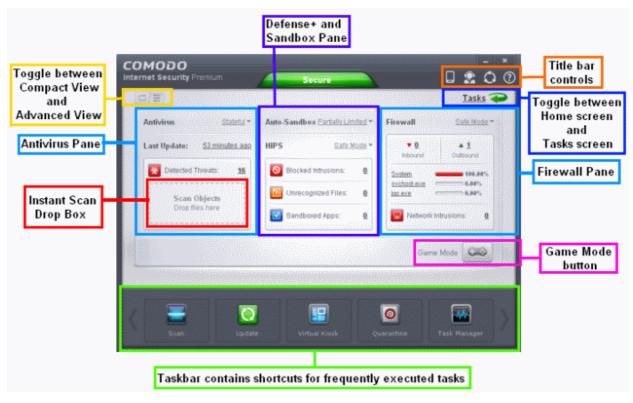

The home screen has been designed in such a way that you can flip the view between Compact View and Advanced View by using the toggle button at the top left side of the interface or from the system tray icon. The Compact View, as the name suggests, is compact and allows you to configure security components setting and run instant scans by dropping files or folders.

Compact View

COMODO Creating Trust Online*

Advanced View

The advanced view shows antivirus, firewall and sandbox activity in greater detail. This includes the number of detected threats, last virus database update time, number of inbound and outbound connections and more.

This view also allows you to quickly change security settings for each component.

Click the following links for more information:

- The Home Screen
- The Tasks Interface
- The Widget
- The System Tray Icon

1.5.1. The Home Screen

The main interface can be switched to display the 'Home' screen or the 'Tasks' interface. Click the curved green arrow at the

upper right of the interface to switch between them:

The home screen itself is available in two formats:

<u>Tasks</u> 🗲
ction: <u>Active</u> 12 minutes ago
Node 🚥
ask Nanager

Terrar Sector Terrar

Advanced View

Click on either thumbnail for more details on that view. Use the buttons at the top-left to switch between the two views:

COMODO Creating Trust Online*

The following areas are common to both compact and advanced views:

- Adding tasks to the Task Bar
- Title bar controls
- Game mode

Compact View

Compact View presents a simple, easy to interface that allows users to quickly launch key tasks and gain an immediate overview of the security of their computer. On the left, there is an instant virus scan box into which you can drag-and-drop files, folders or drives. If you flip this box, you can drag-and-drop programs here that to run them in the sandbox. The pane on the right displays update status and real-time protection status. Clicking on the real-time protection status will flip the pane and allow you to switch individual security components on or off.

In the Compact View of the home screen you can:

- Instantly scan objects / run a program in sandbox
- Enable or disable security components

Instantly scan objects / run a program in sandbox

The pane on the left side of the home screen flips between an instant virus scanner and an instant sandbox.

To run an instant scan, navigate to the file/folder that you want to scan and just drag and drop the file into the 'Scan Objects' box. The virus scan will commence immediately. Refer to 'Instantly Scan Individual Files and Folders' for more details.

To run a program in a sandbox, first flip the pane by clicking the curved arrow at the top right side to display 'Sandbox Objects'.

Now, navigate to the program that you want to run in sandboxed environment and just drag and drop it into the box. The program will start as usual but will be run in the CIS sandbox. Refer to 'Run an application in a sandbox' for more details.

Enable or disable security components

The flippable pane on the right allows you to selectively enable or disable real-time antivirus, the firewall and/or the Auto -Sandbox. The other side of the pane displays the status of real-time protection and when the virus database was updated.

	(
Antivirus	
Firewall	
Auto-Sandbox	

Realtime Prote	ction:	<u>Active</u>
Last Update:	<u>3 ho</u>	ours ago

- Antivirus Click the button at the right side of the bar to enable or disable real-time antivirus scanning. Refer to the section 'Real-time Scanner Settings' for more details.
- **Firewall** Click the button at the right side of the bar to enable or disable firewall protection. Refer to the section 'Firewall Behavior Settings' for more details.
- Auto-Sandbox Monitors the behavior of software and files in your system and prevents them from taking actions that would cause damage. Refer to the section 'Behavior Blocker' for more details.
- Realtime Protection Displays the status of antivirus settings.
- Last Update Displays the last updated time of the virus database. Click on the text link to update the virus database.

Advanced View

Advanced View provides a more detailed summary of the status and security settings of the Antivirus, Defense+ and Firewall components of Comodo Internet Security.

Click the following links to find out more:

- Antivirus Pane
- Defense+ and Sandbox Pane
- Firewall Pane

Antivirus Pane

The Antivirus pane allows you to configure antivirus settings, view last updated virus database time, view the antivirus log and scan files and folders instantly.

minutes a
:s: <u>16</u>
rts re

- Antivirus Displays the antivirus scan settings. Click the drop-down button besides the antivirus scan setting status and select from the options.
 - **On Access** Provides the highest level of On Access Scanning and protection. Any file opened is scanned before it is run and the threats are detected before they get a chance to be executed.
 - Stateful (Default) Not only is Comodo Internet Security one of the most thorough and effective AV solutions available, it is also very fast. CIS employs a feature called Stateful File Inspection for real time virus scanning to minimize the effects of on-access scanning on the system performance. Selecting the 'Stateful' option means CIS scans only files that have not been scanned since the last virus update greatly improving the speed, relevancy

COMODO Creating Trust Online and effectiveness of the scanning.

- **Disabled** The Real time scanning is disabled. Antivirus does not perform any scanning and the threats cannot be detected before they impart any harm to the system.
- Last Update Displays when the virus database was updated. Click on the text link to start the updates again.
- Detected Threats Displays the number of malware threats discovered so far from the start of current session as a link. Clicking this number will open the Antivirus Logs panel.
- Scan Objects Drag-and-drop files/folders into this box for instant scan. Refer to the section Instantly Scan Files and Folders for more details.

Defense+ and Sandbox Pane

The Defense+ and Sandbox Pane allows you to configure Auto-Sandbox and HIPS settings, view Defense+ logs and the number of blocked intrusions, unrecognized files and sandboxed applications.

	-Sandbox Partially Lim	
HIPS	<u>Safe M</u>	ode
0	Blocked Intrusions:	5
2	🔟 Unrecognized Files:	
	Sandboxed Apps:	3

- Auto-Sandbox Displays the status of the auto-sandbox settings. Click on the drop-down button beside the autosandbox settings status and select from the options. Refer to the section 'Behavior Blocker' for more details.
- HIPS Displays the status of Host Intrusion Prevention System settings (Defense+) settings. Click on the drop-down button beside HIPS settings status and select from the options. Refer to the section HIPS Behavior Settings for more details.
- Blocked Intrusions Displays the number of intrusions blocked by HIPS. Clicking on the numbered link beside it will open the Defense+ log screen. Refer to the section Defense+ Logs for more details.
- Unrecognized Files Displays the number of files that are not recognized by CIS and waiting for clarification. Clicking
 on the numbered link beside it will open the Unrecognized Files screen. Refer to the section Unrecognized Files for
 more details.
- Sandboxed Apps Displays the number of applications that are currently running inside the sandbox. Clicking the
 numbered link beside it will open the 'Active Processes List (Sandboxed Only)', which provides the details of the
 currently sandboxed applications. Refer to the section 'View Active Process List' for more details.

Firewall Pane

The Firewall Pane allows you to configure Firewall settings, view the number of inbound and outbound connections and the number of network intrusion attempts blocked by Firewall since the start of current session of CIS.

COMODO Creating Trust Online*

- Firewall Displays the status of the Firewall settings. Click on the drop-down button beside the Firewall settings status and select from the options. Refer to the section 'Firewall Behavior Settings' for more details.
- Inbound / Outbound Connections A numerical summary of currently active inbound and outbound connections to and from the system is displayed here. Clicking on the numbered link will open the View Connections screen. Refer to the section 'View Active Internet Connections' for more details.
- **Traffic** The Traffic area in the pane displays a bar graph showing the applications that are currently connected to the Internet and are sending or receiving data. The summary also displays the % of total traffic each application is responsible for and the filename of the executable. Clicking on any application name will open the View Connections screen.
- Network Intrusions Displays the total number of intrusion attempts blocked by firewall since start of current session of CIS as a link. Clicking on the numbered link will open the Firewall Logs screen. Refer to the section 'Firewall Logs' for more details.

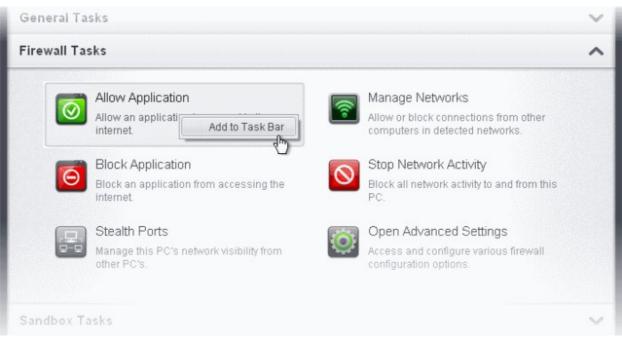

Adding tasks to the Task Bar

The task bar contains a set of shortcuts which will launch common tasks with a single click. You can add any task you wish to this toolbar. Click the handles to the left and right sides to scroll through all tasks.

- To add a task to the Task Bar, first open the tasks interface by clicking the curved arrow:
- Expand any one of the General, Firewall, Sandbox or Advanced Tasks menus.
- Right-click on the task you wish to add then click the message 'Add to Task Bar'.

COMODO Creating Trust Online

The selected task will be added to the Task Bar.

Tip - Many will find it useful to add 'Open Advanced Settings' to the task-bar as it contains several areas important to the configuration of CIS. To do this, from the 'Home' screen, click the 'Tasks' arrow at upper-right, click 'Advanced Settings' then right-click on 'Open Advanced Settings' and select 'Add to Task Bar'.

Title bar controls

The title bar (top right) contains shortcuts for:

- CIS for Android based Mobile or tablet Click the mobile icon and scan the QR code in the image to download the latest Comodo Internet Security Mobile. See https://m.comodo.com/ for more details.
- Talk to a Certified Technician Click the icon to launch the GeekBuddy client and connect to a real-life Comodo security expert. Refer to the topic Comodo GeekBuddy for more details.
- Refer your Friends Click the eigen to open Comodo's Facebook page and refer your friends to Comodo's various products.

E	Scan Scan your computer for viruses and	View Logs View a record of security events,	antivity
	spyware.	and alerts.	activity
C	Update Run the updater to check for program and virus database updates.	Open Task Manager Open the task manager to view m security tasks in progress.	unning
6	View Quarantine	View Connections	
	View and manage threats quarantined by virus scanner.	View applications which are cont the internet.	rected to
Firewall [•]	Tasks		~
Sandbox	Tasks		~
Advance	d Tasks		~

Tasks are broken down into four main sections. Click the following links for more details on each:

- General Tasks Run antivirus scans, update virus database, view and manage quarantined threats, view logs of security events, activity and alerts and view running security tasks. Refer to the section General Tasks for more details.
- Firewall Tasks Allow or block applications, manage ports, manage networks and configure advanced firewall settings. Refer to the section Firewall Tasks for more details.
- Sandbox Tasks Run applications in a virtual environment and configure advanced sandbox settings. Refer to the section 'Sandbox Tasks' for more details.
- Advanced Tasks Create a boot disk to clean up highly infected systems; install other Comodo software like KillSwitch and Cleaning Essentials; submit files to Comodo for analysis and gain access to the 'Advanced Settings' interface. Refer to the section 'Advanced Tasks' for more details.

1.5.3. The Widget

The CIS Widget is a handy control that provides at-a-glance information about the security status, speed of outgoing and incoming traffic and links to social networking sites. The Widget starts automatically when CIS is started unless it is disabled from the **System Tray Icon** or in the **'User Interface'** of **General Settings**.

Right clicking on the Widget opens a context sensitive menu similar to the one displayed on right clicking the CIS system tray icon. The context sensitive menu allows you to enable or disable CIS components and configure various settings. Refer to section **The System Tray Icon** for more details.

COMODO Creating Trust Online*

сомодо	сомодо	сомодо	сомодо
Secure	At Risk	Needs Attention	Game Mode
91 KB/s 💥 8 KB/s	97 KB/s 😻 🎘 7 KB/s	17 KB/s 🗞 486 B/s	17 KB/s 📚 486 B/s

	~	~	~

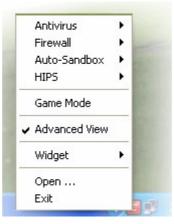

- The color coded row at the top of the widget displays your current security status. Double-clicking on 'At Risk' or 'Needs Attention' opens the appropriate interface for you to take action immediately.
- The second row displays information about incoming and outgoing network traffic. The network traffic row is displayed only if 'Show Traffic pane' under 'Widget options of CIS tray icon or Widget right click menu is enabled. Refer to The System Tray Icon for more details. (*Default = Enabled*)
- The third row tells you current status of the CIS application:
 - The first button displays the number of programs/processes that are currently running in the sandbox. Clicking the button opens the Active Process List interface, which allows you to identify and terminate unnecessary processes. Clicking the 'More' button in this interface will open the KillSwitch application. If KillSwitch is not yet installed, clicking this button will prompt you to download the application. Refer to the sections View Active Process List and Identify and Kill Unsafe Processes for more details.
 - The second button tells you how many CIS tasks are currently running. Clicking the button opens the Windows Task Manager interface.
 - The third button displays how many files are added to Unrecognized Files list and are pending for submission to Comodo for analysis. Clicking on it opens the Unrecognized Files interface which displays the list of Unrecognized files.

The status row is displayed only if 'Show Status Pane' is enabled under 'Widget options of CIS tray icon or Widget right click menu. Refer to **The System Tray Icon** for more details. (*Default = Disabled*)

- The forth row contains shortcuts for five common tasks you have in the task bar at the bottom of the home screen. Clicking the shortcut on the widget will run the task. The Common Tasks row is displayed only if 'Show Common Tasks Pane' is enabled under 'Widget' options of CIS tray icon or Widget right click menu. Refer to The System Tray Icon for more details. (*Default = Enabled*)
- The fifth row displays the browsers installed in your computer system. Clicking on a browser icon will open the browser inside the sandbox for a secure browsing session. You can tell the browser is running in the sandbox because it will have a green border around it. Refer to Running an application inside the sandbox for more details. The Browsers row is displayed only if 'Show Browsers Pane' is enabled under 'Widget' options of CIS tray icon or Widget right click menu. Refer to The System Tray Icon for more details. (Default = Enabled)
- The last row in the Widget provides links to social networking sites. The social networking sites row is displayed only if 'Show Connect Pane' is enabled under 'Widget' options of CIS tray icon or Widget right click menu. Refer to The System Tray Icon for more details. (*Default = Enabled*)
- You can expand or collapse the Widget by clicking the arrow at the bottom.

1.5.4. The System Tray Icon

In addition to providing a fast way of starting CIS, the system tray icon solution is short cuts that allow you to configure various security settings. Right click on the icon to access the menu:

The options available for the Antivirus, Firewall and Auto-sandbox menu-items depend on whether you are using **Compact View** or **Advanced View**.

Compact View	Advanced View	
Antivirus - You can enable or disable Real-time antivirus scan.	Antivirus - Options available are On Access, Stateful and Disabled. Refer to Antivirus Pane for more details.	
Firewall - You can enable or disable Firewall.	Firewall - Options available are Block All, Custom Ruleset, Safe Mode, Training Mode and Disabled. Refer to the section 'Firewall Behavior Settings' for more details.	
Auto-Sandbox - You can enable or disable Auto-Sandbox.		
Refer to the section 'Behavior Blocker' for more details.	Auto-Sandbox - Options available are Fully Virtualized, Partially Limited, Limited, Restricted, Untrusted, Blocked and Disabled. Refer to the section ' Behavior Blocker ' for more details.	
	HIPS - Options available are Paranoid Mode, Safe Mode, Clean PC Mode, Training Mode and Disabled. Refer to the section HIPS Behavior Settings for more details.	

If any of the antivirus, firewall and auto-sandbox settings are disabled, immediately the Security Information in the main task interface and the Widget will turn red alerting you of the status. In addition, a pop-up alert depending on the feature disabled will be displayed.

You can select the period for which the security should be turned off from the drop-down.

COMODO Creating Trust Online

- Show Common Tasks Pane: Displays the row containing shortcuts to common CIS tasks in the widget. (Default = Disabled)
- Show Browsers Pane: Displays the row containing the shortcuts to browsers in your computer. (*Default = Enabled*)
- Show Connect Pane: Displays the row containing the shortcuts to social networking sites in the widget. (Default = Enabled)
- **Open** Opens the CIS interface.
- Exit Closes the CIS application.

1.6. Understanding Security Alerts

CIS alerts warn you about security related activities and requests at the moment they occur. Each alert contains information about the particular issue so you can make an informed decision about whether to allow or block it. Alerts also allow you to tell Comodo Internet Security how to behave in future when it encounters activities of the same type.

Comodo Internet Security alerts come in four main varieties, namely:

- Antivirus Alerts Shown whenever virus or virus-like activity is detected. AV alerts will be displayed only when Antivirus is enabled and the option 'Do not show antivirus alerts' is disabled in Real-time Scanner Settings.
- Firewall Alerts Shown whenever a process attempts unauthorized network activity. Firewall alerts will be displayed only when the Firewall is enabled and the option 'Do not show popup alerts' is disabled in Firewall Settings.
- HIPS Alerts Shown whenever an application attempts an unauthorized action or tries to access protected areas. HIPS alerts will only be generated if HIPS is enabled and Do NOT show popup alerts is disabled.

Behavior Blocker / Auto-Sandbox Alerts (including Elevated Privilege Alerts) - Shown whenever an application tries to modify the Operating System or related files and when the Behavior Blocker automatically sandboxes an unrecognizable file. Behavior Blocker / Auto-Sandbox Alerts will be displayed only when autosandboxing is enabled under Behavior Blocker settings. Privilege Alerts will only be shown if enabled.

In each case, the alert may contain very important security warnings or may simply occur because you are running a certain application for the first time. Your reaction should depend on the information that is presented at the alert.

Note: This section is concerned only with the security alerts generated by the Antivirus, Firewall, HIPS and Behavior Blocker components of CIS. For other types of alert, see Comodo Message Center notifications, Notification Messages and Information Messages.

Severity Level

•

The shield icons at the upper left of each alert are color coded according to the risk level presented by the activity or request. However, it cannot be stressed enough that you should still read the information in order to reach an informed decision on allowing or blocking the activity.

- Yellow Icons Low Severity In most cases, you can safely approve these requests. The 'Remember my answer'
 option is automatically pre-selected for safe requests
- Orange Icons Medium Severity Carefully read the information in the alert description area before making a
 decision. These alerts could be the result of a harmless process or activity by a trusted program or an indication of an
 attack by malware. If you know the application to be safe, then it is usually okay to allow the request. If you do not
 recognize the application performing the activity or connection request then you should block it.
- **Red Icons** High Severity These alerts indicate highly suspicious behavior that is consistent with the activity of a Trojan horse, virus or other malware program. Carefully read the information provided when deciding whether to allow it to proceed.

Note: Antivirus alerts are not ranked in this way. They always appear with a red icon.

Alert Description

The description is a summary of the nature of the alert and can be revealed by clicking the handle as shown:

The description tells you the name of the software/executable that caused the alert; the action that it is attempting to perform and how that action could potentially affect your system. You can also find helpful advice about how you should respond.

Now that we've outlined the basic construction of an alert, lets look at how you should react to them.

Answering an Antivirus Alert

Comodo Internet Security generates an Antivirus alert whenever a virus or virus-like activity is detected on your computer. The alert contains the name of the virus detected and the location of the file or application infected by it. Within the alert, you are also presented with response-options such as 'Clean' or 'Ignore'.

Note: Antivirus alerts will be displayed only if the option 'Do not show antivirus alerts' is disabled. If this setting is enabled, **antivirus notifications** will be displayed. This option is found under 'Security Settings > Antivirus > Realtime Scan'. Refer to **Real-time Scanner Settings** for more details.

сомо	DDO Antivirus Alert
	ApplicUnwnt@#v4y2wc0w67a6
Location: More infor	E:\New Folder\Suspicio\CPILSuite.exe mation: Unavailable
	Clean (Recommended) Quarantines the file
	Ignore Ignores the alert and allows the file operation

The following response-options are available:

- Clean Disinfects the file if a disinfection routine exists. If no routine exists for the file then it will be moved to Quarantine. If desired, you can submit the file/application to Comodo for analysis from the Quarantine interface. Refer to Manage Quarantined Items for more details on quarantined files.
- Ignore Allows the process to run and does not attempt to clean the file or move it to quarantine. Only click 'Ignore' if you are absolutely sure the file is safe. Clicking 'Ignore' will open three further options:

Ignore Once -The file is allowed to run this time only. If the file attempts to execute on future occasions, another

antivirus alert is displayed.

- Ignore and Add to Exclusions The file is allowed to run and is moved to the Exclusions list effectively making this the 'Ignore Permanently' choice. No alert is generated if the same application runs again.
- Ignore and Report as a False Alert If you are sure that the file is safe, select 'Ignore and Report as a False Alert'. CIS will then submit this file to Comodo for analysis. If the false-positive is verified (and the file is trustworthy), it will be added to the Comodo safe list.

Antivirus Notification

If CIS detects a virus or other malware, it will immediately block it and provide you with instant on-screen notification:

сомо		?	×
0	Malware Stopped		
	n t.Win32.Leaktest.Ghost@57119 NGhost\Ghost\Ghost.exe		
🔲 Hide the	se alerts		

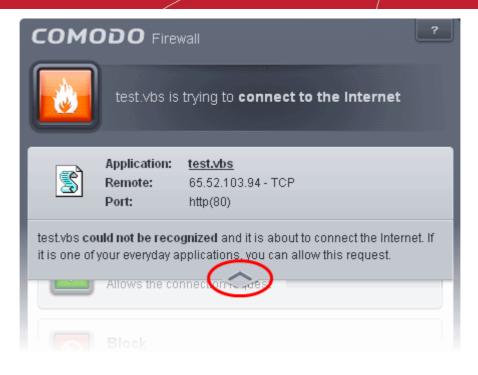

Please note that these antivirus notifications will be displayed only when 'Do not show antivirus alerts' check box in Antivirus > Real-time Scan settings screen is selected *and* 'Show notification messages' check box is enabled in Advanced Settings > User Interface screen.

Answering Firewall Alerts

CIS generates a firewall alert when it detects unauthorized network connection attempts or when traffic runs contrary to one of your application or global rules. Each firewall alert allows you to set a default response that CIS should automatically implement if the same activity is detected in future. The followings steps will help you answer a Firewall alert:

Carefully read the information displayed in clicking the down arrow in the alert description area. The Firewall can
recognize thousands of safe applications. (For example, Internet Explorer and Outlook are safe applications). If the
application is known to be safe - it is written directly in the security considerations section along with advice that it is
safe to proceed. Similarly, if the application is unknown and cannot be recognized you are informed of this.

COMODO Creating Trust Online

If it is one of your everyday applications and you want to allow it Internet access to then you should select Allow.

In all cases, clicking on the name of the application opens a properties window that can help you determine whether or not to proceed:

test Properties ? D	COM020 - 3
General Script Summary	COMODO Firewall
test	test.vbs is trying to connect to the Internet
Type of file: VBScript Script File	
Opens with: 👛 Microsoft (R) Windows Change	Application: test.vbs
Location: C:\	Remote: 65.52.103.94 - TCP Port: http(80)
Size: 412 bytes (412 bytes)	~
Size on disk: 4.00 KB (4,096 bytes)	
Created: Wednesday, October 03, 2012, 11:50:32 AM	Allows the connection request
Modified: Wednesday, October 03, 2012, 11:50:32 AM	
Accessed: Today, October 17, 2012, 1:38:56 PM	Block
Attributes: Read-only Hidden Advanced	Block the connection request
	Treat as Lets you choose a ruleset to apply
OK Cancel Apply	Remember my answer

If you don't recognize the application then we recommend you **Block** the application. By clicking the handle to expand the alert, you can choose to block the connection (connection is not allowed to proceed) or block & terminate (connection is not allowed to proceed and the process/application that made the request is shut down).

COMODO Creating Trust Online

COMODO Firewall			
	test.vbs is	trying to connect to the Internet	
8	Application: Remote: Port:	test.vbs 65.52.103.94 - TCP http(80)	
	Block Block the con	nection request	^
Block On	ly		
Block and	l Terminate		
	Treat as Lets you choo	se a ruleset to apply	~

2. If you are sure that it is one of your everyday application, try to use the 'Treat As' option as much as possible. This allows you to deploy a predefined firewall ruleset on the target application. For example, you may choose to apply the policy Web Browser to the known and trusted applications 'Internet Explorer', 'Firefox' and 'Opera'. Each predefined ruleset has been specifically designed by Comodo to optimize the security level of a certain type of application.

Lets you choose a ruleset to apply	^
Web Browser	
Ftp Client	
Allowed Application	
Blocked Application	
Outgoing Only	

Remember to check the box Remember My Answer for the ruleset to be applied in future.

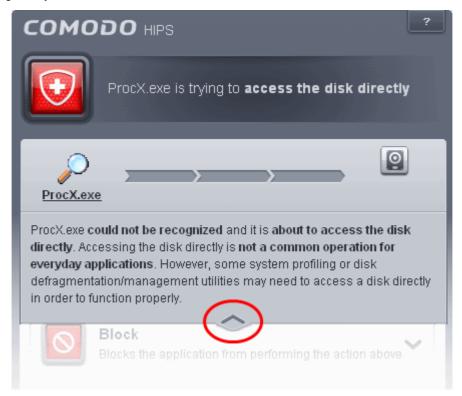

3. If the Firewall alert reports a behavior, consistent with that of a malware in the security considerations section, then you should block the request AND select **Remember My Answer** to make the setting permanent.

Answering HIPS Alerts

Comodo Internet Security generates a HIPS alert based on the behavior of applications and processes running on your system.

Please read the following advice before answering a HIPS alert:

Carefully read the information displayed after clicking the handle under the alert description. Comodo Internet Security
can recognize thousands of safe applications. If the application is known to be safe - it is written directly in the security
considerations section along with advice that it is safe to proceed. Similarly, if the application is unknown and cannot
be recognized, you are informed of this.

If it is one of your everyday applications and you simply want it to be allowed to continue then you should select Allow.

If you don't recognize the application then we recommend you select **Block** the application. You can choose to just block the connection or to block & terminate.

COMODO Creating Trust Online

сомс	DO HIPS
	memory_spy2.vbs is trying to access the disk directly
memory st	<u>N</u>
	Block Blocks the application from performing the action above
Block On	ly
Block and	1 Terminate
	Treat as

2. If you are sure that it is one of your everyday applications and want to enforce a security policy (ruleset) to it, please use the 'Treat As' option. This applies a **predefined HIPS ruleset** to the target application.

memory_spy2.vbs is trying to access the disk directly
memory spy
Treat as Lets you choose a ruleset to apply
Installer or Updater
Allowed Application
Windows System Application
Isolated Application
Limited Application
Remember my answer

Avoid using the **Installer or Updater** ruleset if you are not installing an application. This is because treating an application as an 'Installer or Updater' grants maximum possible privileges onto to an application - something that is

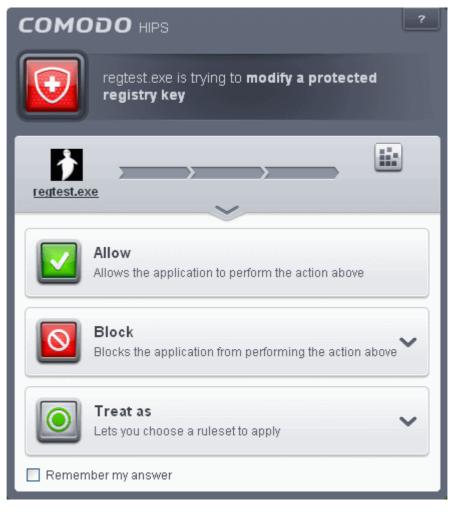

not required by most 'already installed' applications. If you select 'Installer or Updater', you may consider using it temporarily with **Remember My Answer** left unchecked.

 Pay special attention to Device Driver Installation and Physical Memory Access alerts. Again, not many legitimate applications would cause such an alert and this is usually a good indicator of malware / rootkit like behavior. Unless you know for a fact that the application performing the activity is legitimate, then Comodo recommends blocking these requests.

4. **Protected Registry Key** Alerts usually occur when you install a new application. If you haven't been installing a new program and do not recognize the application requesting the access, then a 'Protected Registry Key Alert' should be a cause for concern.

COMODO Creating Trust Online

5. **Protected File Alerts** usually occur when you try to download or copy files or when you update an already installed application.

COMODO Creating Trust Online

Were you installing new software or trying to download an application from the Internet? If you are downloading a file from the 'net, select **Allow**, without selecting **Remember my answe**r option to cut down on the creation of unnecessary rules within the firewall.

If an application is trying to create an executable file in the Windows directory (or any of its subdirectories) then pay special attention. The Windows directory is a favorite target of malware applications. If you are not installing any new applications or updating Windows then make sure you recognize the application in question. If you don't, then click **Block** and choose **Block Only** from the options, without selecting **Remember My answer** option.

If an application is trying to create a new file with a random file name e.g. "hughbasd.dll" then it is probably a virus and you should block it permanently by clicking **Treat As** and choosing **'Isolated Application'** from the options.

- If a HIPS alert reports a malware behavior in the security considerations area then you should **Block the request** permanently by selecting **Remember My Answer** option. As this is probably a virus, you should also submit the application in question, to Comodo for analysis.
- 7. Unrecognized applications are not always bad. Your best loved applications may very well be safe but not yet included in the Comodo certified application database. If the security considerations section says "If xxx is one of your everyday applications, you can allow this request", you may allow the request permanently if you are sure it is not a virus. You may report it to Comodo for further analysis and inclusion in the certified application database.
- If HIPS is in Clean PC Mode, you probably are seeing the alerts for any new applications introduced to the system but not for the ones you have already installed. You may review the 'Unrecognized Files' section for your newly installed applications and remove them from the list for them to be considered as clean.
- 9. Avoid using Trusted Application or Windows System Application policies for you email clients, web browsers, IM or P2P applications. These applications do not need such powerful access rights.

Answering a Behavior Blocker / Auto-Sandbox Alert

Comodo Internet Security generates a Behavior Blocker alert if an application or a process tries to perform certain modifications to the operating system, its related files or critical areas like Windows Registry and when it automatically sandboxes an unknown

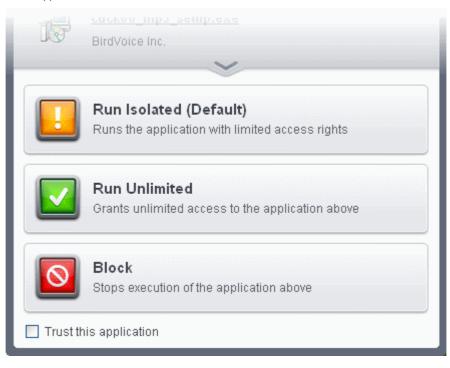

application.

Please read the following advice before answering a Behavior Blocker alert:

 Carefully read the information displayed after clicking the handle under the alert description. Comodo Internet Security can recognize thousands of safe applications. If the application is known to be safe - it is written directly in the security considerations section along with advice that it is safe to proceed. Similarly, if the application is unknown and cannot be recognized, you are informed of this.

COMODO Behavior Blocker
installer_r20.0.3-windows.exe could not be recognized and requests unlimited access to your computer
installer r20.0.3-windows.exe Unidentified Publisher
The publisher of installer_r20.0.3-windows.exe has NOT digitally signed their application. Hence the origin of this application should not be trusted . Digital Signing helps with verifying the authenticity of applications. If you are unsure , we strongly recommend you press the "Run Isolated" button .
Run Unlimited Grants unlimited access to the application above

If you are sure that the application is authentic and safe and you simply want it to be allowed to continue then you should select Run Unlimited. If you want the application not to be monitored in future, select 'Trust this application' checkbox. The application will be added to Trusted Files list.

If you are unsure of the safety of the software, then Comodo recommends that you run it with limited privileges and

.

access to your system resources by clicking the 'Run Isolated' button. Refer to the section **Unknown Files: The Auto-**Sandboxing and Scanning process for more explanations on applications run with limited privileges.

If you don't recognize the application then we recommend you select Block the application.

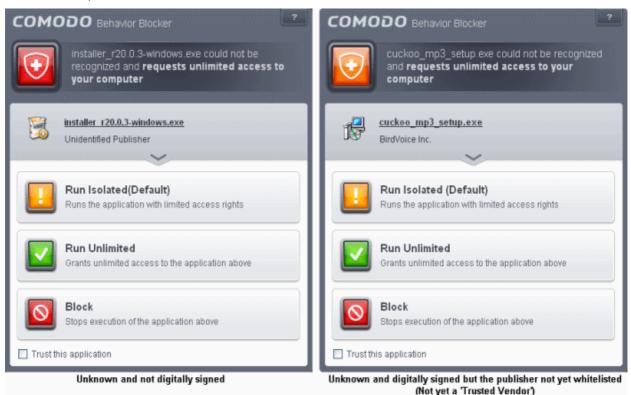

Run with Elevated Privileges Alert

The Behavior Blocker will display this kind of alert when the installer of an unknown application requires administrator, or elevated, privileges to run. An installer that is allowed to run with elevated privileges is permitted to make changes to important areas of your computer such as the registry.

- If you have good reason to trust the publisher of the software then you can click the 'Run Unlimited' button. This will
 grant the elevated privilege request and allow the installer to run.
- If you are unsure of the safety of the software, then Comodo recommends that you run it with restricted access to your system resources by clicking the 'Run Isolated' button.
- If this alert is unexpected then you should abort the installation by clicking the 'Block' button (for example, you have not proactively started to install an application and the executable does not belong to an updater program that you recognize)
- If you select 'Trust this application' then CIS will include this to Trusted Files list and no future alerts will be generated when you run the same application.

Note: You will see this type of alert only if 'Detect installers and show privilege elevation alerts' is enabled. This can be found in 'Advanced Settings > Security Settings > Defense+ > Behavior Blocker'

There are two versions of this alert - one for unknown installers that are not digitally signed and the second for unknown installers that are digitally signed but the publisher of the software has *not yet* been white-listed (they are not yet a 'Trusted Software Vendor').

- Unknown and unsigned installers should be either isolated or blocked.
- Unknown but signed installers can be allowed to run if you trust the publisher, or may be isolated if you would like to evaluate the behavior of the application.

Also see:

- 'Unknown Files: The Auto-Sandboxing and Scanning Processes' to understand the decision making
 process behind why CIS chooses to sandbox certain applications.
- 'Trusted Software Vendors' for an explanation of digitally signed files and 'Trusted Software Vendors'.

Auto-Sandbox Alerts

The Behavior Blocker will display an alert whenever it auto-sandboxes an unknown application:

The alert will show the name of the executable that has been auto-sandboxed. The application will be automatically added to **Unrecognized Files** list.

- Clicking the name of the application will open the Unrecognized Files interface, that displays a list of the unrecognized files including the currently auto-sandboxed application.
- Clicking <u>Don't isolate it again</u> removes the application from the Unrecognized Files list and adds it to the Trusted Files list, so that the application will not be auto-sandboxed in future. Choose this option if you are absolutely sure that the executable is safe.

Users are also reminded that they should submit such unknown applications to Comodo via the 'Unrecognized Files' interface. This will allow Comodo to analyze the executable and, if it is found to be safe, to add it to the global safe list. This will ensure that unknown but ultimately safe applications are quickly white-listed for all users.

Also see:

 'Unknown Files: The Auto-Sandboxing and Scanning Processes' - to understand the decision making process behind why CIS chooses to auto-sandbox certain applications.

2. General Tasks - Introduction

The 'General Tasks' interface allows you to quickly perform antivirus scans, update the virus database, manage quarantined files, view CIS event logs, view and manage Internet connections and manage CIS running tasks.

2.1. Scan and Clean Your Computer

Comodo Antivirus leverages multiple technologies, including Real-time/On-Access Scanning and On-Demand Scanning to immediately start cleaning or quarantining suspicious files from your hard drives, shared disks, emails, downloads and system memory. The application also allows users to create custom scan profiles, time-table scheduled scans and features full event logging, quarantine and file submission facilities. When you want to run a virus scan on your system, you can launch an **On-Demand Scan** using the **Scan** option. This executes an instant virus scan on the selected item.

COMODO Creating Trust Online*

There are multiple types of antivirus scan that can be run from the 'Scan' interface. Click the links below to find out more on each:

- Run a Quick Scan
- Run a Full Computer Scan
- Run a Rating Scan
- Run a Custom Scan
 - Scan a Folder
 - Scan a File
 - Create and Schedule a Custom Scan
- Scan individual file/folder
- Processing Infected Files

2.1.1. Run a Quick Scan

The 'Quick Scan' profile enables you to quickly scan critical areas of your computer which are highly prone to infection from viruses, rootkits and other malware. The areas scanned include system memory, auto-run entries, hidden services, boot sectors and other significant areas like important registry keys and system files. These areas are of great importance to the health of your computer so it is essential to keep them free of infection.

You can customize which items are scanned under a 'Quick Scan' and create a scan schedule from the 'Advanced Tasks' interface. Refer to **Antivirus Settings > Scan Profiles** for more details.

To run a Quick Scan

• Click 'Scan' from the General Tasks interface and click 'Quick Scan' from the 'Scan' interface.

COMODO Creating Trust Online*

сомо	DO Scan	? _ ×

2.1.3. Run a Rating Scan

The 'Rating Scan' feature runs a cloud-based assessment on files on your computer to assess how trustworthy they are.

Based on the trustworthiness, the files are rated as:

- Trusted the file is safe
- · Unknown the trustworthiness of the file could not be assessed
- Bad the file is unsafe and may contain malicious code. You will be presented with disinfection options for such files.

To run a Rating scan

• Click the curved 'Tasks' arrow on the home screen then click 'General Tasks' > 'Scan' > 'Rating Scan':

COMODO Creating Trust Online

After the cloud scanners have finished their analysis, file ratings will be displayed as follows:

COMODO Rating Sca	an			1	? –	×
0.00%	rusted Files: 71 Jnknown Files: 4 Bad Files: 1		Auto	ning Files: 370 run Files: 393 age File Age: 43	months	
Show All Files	•					
File Name	Rating	Age	Autorun	Action Clean	~	
kbdclass.sys	🔽 Trusted	53 months	ø			
mplayer2.exe	🔽 Trusted	12 months	Ø			-
TrojWare.Win32.Gam	🔯 Bad	6 months	Ø	Clean	~	
Shdocvw.dll	🔽 Trusted	53 months	ø			
Sysmgr1.uno.dll	🔟 Unknown	33 months		No Action	*	
				Apply Selected	Actions	Ĵ
Turn off this computer if no t	nreats are found at t	he end of the so	can			
* Close				Send to Back	ground	

- File Name: The file which was scanned
- Rating: The rating of the file as per the cloud based analysis
- Age: The period of time that the file has been stored on your computer
- Autorun: Indicates whether the file is an auto-run file or not. Malicious auto-run files could be ruinous to your computer so we advise you clean or quarantine them immediately.

You can filter the results by rating using the 'Show' drop-down:

Each file identified as 'Bad' is accompanied with a drop-down box that allows you to 'Clean', 'Trust' or 'Take no action'

國 Bad	6 months	0	Clean	~
Trusted	53 months	0	Clean No Action	
🔯 Trusted	53 months	0	Trust	

- Clean If a disinfection routine is available for the selected infection(s), Comodo Antivirus will disinfect the application and retain the application file. If a disinfection routine is not available, Comodo Antivirus will move the files to Quarantine for later analysis. See Manage Quarantined Items for more info.
- No Action If you wish to ignore the file, select 'No Action'. Use this option with caution. By choosing to neither 'Clean' nor 'Trust', this file will be detected by the next ratings scan that you run.
- Trusted The file will be moved to Trusted Files list and will be given 'Trusted' rating from the next scan.

For the same action to be applied to all 'Bad' files, make a selection from the drop-down menu at the top of the 'Action' column.

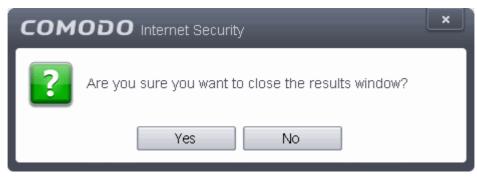

Show All Files			-				
File Name	Rating	Age	Autorun	Action	Clean	*	-
mplayer2.exe	🔽 Trusted	12 months	٥		Clean No Action	ſ	
TrojWare.Win32.Gam	👿 Bad	6 months	0	Clean	Trust		

Click 'Apply Selected Actions' to implement your choice. The selected actions will be applied and a progress bar will be displayed underneath the results:

2.1.4. Run a Custom Scan

Comodo Antivirus allows you to create custom scan profiles to scan specific areas, drives, folders or files in your computer. To run a custom scan, click 'Scan' from the 'General Tasks' interface then click 'Custom Scan'. The Custom Scan panel will open:

COMODO Creating Trust Online*

C	омо	DO Scan	? _ ×
	0	Quick Scan Scans commonly infected areas and memory.	Last Scan: 09.12.2012
	X	Custom Scan Scan files and folders or run custom ஆுn profiles.	^
		Folder Scan Select and scan a folder.	
		File Scan Select and scan a file.	
	$\overline{\mathbf{x}}$	More Scan Options Run custom scan profiles.	

The 'Custom Scan' panel contains the following scan options. Click the links to jump to the help page for that topic.

- Folder Scan scan individual folders
- File Scan scan an individual file
- More Scan Options create a custom scan profile here

2.1.4.1. Scan a Folder

The custom scan allows you to scan a specific folder stored in your hard drive, CD/DVD or in external devices like a USB drive connected to your computer. For example you might have copied a folder from another computer in your network, an external device or downloaded from Internet and want to scan it for viruses and other threats before you open it.

To scan a specific folder

- · Click Scan from the 'General Tasks' interface and Click 'Custom Scan' from the 'Scan' interface
- · Click 'Folder Scan' from the 'Custom Scan' pane
- Navigate to the folder to be scanned in the 'Browse for Folder' window and click OK

COMODO Creating Trust Online*

- Add File Allows you to add individual files to the profile.
- Add Folder Allows you to select entire folders to be included in the profile
- Add Region Allows you to add pre-defined regions to the profile (choice of 'Full Computer', 'Commonly Infected Areas' and 'System Memory')

COMODO Creating Trust Online

- Repeat the process to add more items to the profile. Click 'OK' to confirm your choice.
- Next, click 'Options' to further customize the scan:

		_	×
Scan Name: Example Scan Profile Define items to be scanned, scanning options and running schedule			
ltems			~
Options			^
 Enable scanning optimizations This option increases the scanning speed significantly Decompress and scan compressed files This option allows scanner to decompress archive files e.gZip .Rar etc. during scanning Use cloud while scanning This option allows scanner to connect to cloud to query file ratings Automatically clean threats Disinfect Threats When the threats are identified, perform the selection action automatically Use heuristics scanning Low When the threats are identified, perform the selection action automatically Limit maximum file size to 40 MB(s) While scanning, if a file size is larger then specified, it is not scanned 			
Shedule			~
ОК	C	Cance	el

• Options:

•

Enable scanning optimizations - On selecting this option, the antivirus will employ various optimization techniques like running the scan in the background in order to speed-up the scanning process (*Default* = *Enabled*).

- **Decompress and scan compressed files** When this check box is selected, the Antivirus scans archive files such as .ZIP and .RAR files. Supported formats include RAR, WinRAR, ZIP, WinZIP ARJ, WinARJ and CAB archives (*Default = Enabled*).
- Use cloud while scanning Selecting this option enables the Antivirus to detect the very latest viruses
 more accurately because the local scan is augmented with a real-time look-up of Comodo's online signature
 database. With Cloud Scanning enabled your system is capable of detecting zero-day malware even if your
 local anitvirus database is out-dated. (Default = Disabled).
- Automatically clean threats Enables you to select the action to be taken against the detected threats and
 infected files automatically from disinfecting Threats and moving the threats to quarantine.
- Use heuristics scanning Enables you to select whether or not Heuristic techniques should be applied on scans in this profile. You are also given the opportunity to define the heuristics scan level. (Default = Disabled).

Background Info: Comodo Internet Security employs various heuristic techniques to identify previously unknown viruses and Trojans. 'Heuristics' describes the method of analyzing the code of a file to ascertain whether it contains code patterns similar to those in known viruses. If it is found to do so then the application deletes the file or recommends it for quarantine. Heuristics is about detecting 'virus-like' traits or attributes rather than looking for a precise virus signature that matches a signature on the virus blacklist.

This allows CIS to 'predict' the existence of new viruses - even if it is not contained in the current virus database.

- Low Lowest' sensitivity to detecting unknown threats but will also generate the fewest false positives. This setting combines an extremely high level of security and protection with a low rate of false positives. Comodo recommends this setting for most users.
- Medium Detects unknown threats with greater sensitivity than the 'Low' setting but with a
 corresponding rise in the possibility of false positives.
- **High** Highest sensitivity to detecting unknown threats but this also raises the possibility of more false positives too.
- Limit maximum file size to Select this option if you want to impose size restrictions on files being scanned. Files of size larger than that specified here, are not scanned, if this option is selected (*Default* = 40 MB).
- Run this scan with Enables you to set the priority of the scan profile. You can select the priority from the drop-down.(*Default = Disabled*).
- Update virus database before running Instructs Comodo Internet Security to check for latest virus signature database updates from Comodo website and download the updates automatically before starting the scanning (*Default = Enabled*).
- Detect potentially unwanted applications When this check box is selected, Antivirus scans also scans for applications that (i) a user may or may not be aware is installed on their computer and (ii) may functionality and objectives that are not clear to the user. Example PUA's include adware and browser toolbars. PUA's are often installed as an additional extra when the user is installing an unrelated piece of software. Unlike malware, many PUA's are 'legitimate' pieces of software with their own EULA agreements. However, the 'true' functionality of the software might not have been made clear to the end-user at the time of installation. For example, a browser toolbar may also contain code that tracks a user's activity on the Internet (*Default = Enabled*).
- If you want the scan to run at specific times, click 'Schedule':

COMODO Scan						?	_	×			
Scan Name:	Example Scan Profile										
Define items to	be scanned, scanning options	s and run	ning sc	nedule							
ltems											~
Options											~

The choices for the actions available are:

- Clean If a disinfection routine is available for the selected intection(s), Comodo Antivirus will disinfect the
 application and retain the application safe. If the disinfection routine is not available, Comodo Antivirus will
 move the infections to Quarantine for later analysis and restoring/removal of the files. For more details on
 guarantine feature, refer to Manage Quarantined Items.
- **Ignore Once** If you want to ignore the threat this time only, select 'Ignore Once'. The file will be ignored only at that time. If the same application invokes again, the Antivirus will report it as a threat.
- Add to Trusted Files If you trust the file, select 'Add to Trusted Files'. The file will be moved to Trusted Files list. The alert will not generated if the same application invokes again.
- **Report as a False Alert** If you are sure that the file is safe, select 'Report as a False Alert'. The Antivirus will send the file to Comodo for analysis. If the file is trustworthy, it is added to the Comodo safe list.
- Add to Exclusions The file will be moved to Exclusions list and will not be scanned in future. The alert
 will not generated if the same application invokes again.
- After selecting the action(s) to be applied, click 'Apply Selected Actions'. The files will be treated as per the action selected and the progress will be displayed.

2.4. Manage Virus Database and Program Updates

In order to guarantee continued and effective antivirus protection, it is imperative that your virus databases are updated as regularly as possible. Updates can be downloaded to your system **manually** or **automatically** from Comodo's update servers.

To manually check for the latest virus Database and program updates

- 1. Switch to 'Tasks' screen and click 'General Tasks' to open the 'General Tasks' interface.
- 2. Click 'Update'. The application will start checking for program and database updates

COMODO Internet Security Prem	ium Se	cure	- ×

	Options
	Do NOT check for updates if I am using these connections
	Do NOT check for updates if running on battery

You can also configure Comodo Antivirus to download updates automatically before any on-demand scan. Refer to **Scan Profiles** for more details.

2.5. Manage Quarantined Items

The quarantine facility removes and isolates suspicious files into a safe location before analyzing them for possible infection. Any files transferred in this fashion are encrypted- meaning they cannot be run or executed. This isolation prevents infected files from affecting the rest of your PC. If a file cannot be disinfected, then it provides a reliable safe-house until the virus database is updated- neutralizing the impact of any new virus.

The Quarantine interface can be accessed by clicking View Quarantine from the 'General Tasks' interface.

The 'Quarantine' interface displays a list of items moved to Quarantine from the results of real-time scanning, on-demand scanning and manually.

ltem	Location	Date/Time
ApplicUnwnt@#17ozjz1	C:\Program Files\Bluto Force\OliveoyI\cpil_suite\cpil.exe	26 Dec 12 15:.
ApplicUnwnt@#1mc1h	C:\Program Files\Bluto Force\OliveoyI\cpil_suite\CPIL2	26 Dec 12 15:.

ApplicUnwnt@#1mc1h	C:\Program Files\Bluto Force\OliveoyI\cpil_suite\CPIL3	26 Dec 12 15:
ApplicUnwnt@#v4y2wc	C:\Program Files\Bluto Force\Oliveoyl\cpil_suite\CPILS	26 Dec 12 15:
	Refresh	Close

Column Descriptions

- Item Indicates which application or process propagated the event;
- Location Indicates the location where the application or the file is stored;
- Date/Time Indicates date and time, when the item is moved to quarantine.

For details on adding executables identified as infected files during on-demand or real time scans to Quarantine, refer to **General Tasks > Scan and Clean Your Computer**.

The Quarantined Items interface also allows you to:

- · Manually add applications, executables or other files, that you do not trust, as a Quarantined item
- Delete a selected quarantined item from the system
- · Restore a quarantined item to oits original location
- Delete all quarantined items
- Submit selected quarantined items to Comodo for analysis

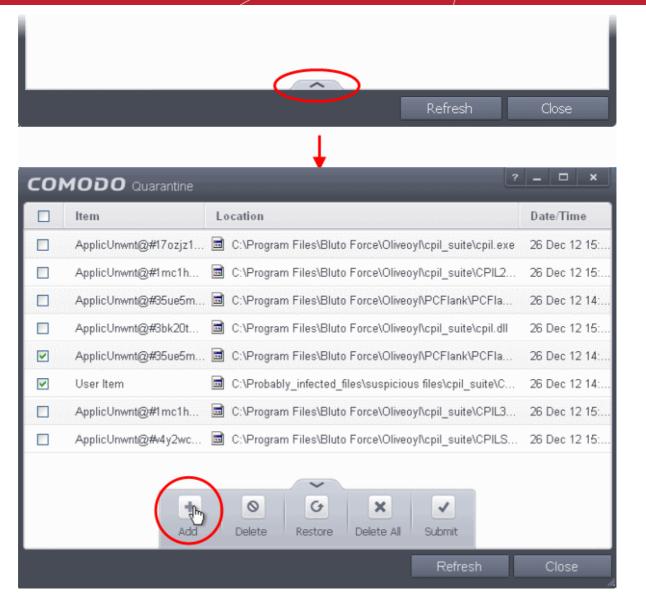

Manually adding files as Quarantined Items

If you have a file, folder or drive that you suspect may contain a virus and not been detected by the scanner, then you have the option to isolate that item in quarantine.

To manually add a Quarantined Item

1. Click the handle from the bottom of the Quarantine interface and select 'Add' from the options.

2. Navigate to the file you want to add to the quarantine and click 'Open'.

Comodo Internet Security 2013 User Guide | © 2013 Comodo Security Solutions Inc. | All rights reserved

Open					? 🗙
Look in:	🗀 suspicious pro	ograms	✓ G	🏂 📂 🛄-	
My Recent Documents	abduct_oliveoy	1			
Desktop					
My Documents					
My Computer					
S	File name:	abduct_oliveoyl		~ (Open
My Network	Files of type:	All files (*.*)		✓ (Cancel

The file will be added to Quarantine. You can even send the file for analysis to Comodo, for inclusion in the white list or black list, by clicking Submit from the options.

To delete a quarantined item from the system

- Select the item(s) from the 'Quarantine' interface
- Click the handle from the bottom of the interface and select 'Delete' option.

This deletes the file from the system permanently.

To restore a quarantined item to its original location

- Select the item(s) from the Quarantine interface
- Click the handle from the bottom of the interface and select 'Restore' option.

сом	ODO Internet Security
	Would you like to add these files to your AV excluded files too?
	Yes No

An option will be provided to add the file(s) to Exclusions list and if 'Yes' is opted, these files will not be scanned again.

The file will be restored to the original location from where it was moved to Quarantine. If the restored item does not contain a malware, it will operate as usual. But if it contains a malware, it will be detected as a threat immediately, if the Real-Time Scanning is enabled or during the next scan if it is not added to Exclusions list while restoring.

To remove all the quarantined items permanently

Click the handle from the bottom of the interface and select 'Clear' option.

All the quarantined items will be deleted from your system permanently.

To submit selected quarantined items to Comodo for analysis

- Select the item(s) from the Quarantine interface
- Click the handle from the bottom of the interface and select 'Submit' option.

You can submit the files which you suspect to be a malware or the files which you consider as safe but identified as malware by Comodo Antivirus (False Positives). Comodo will analyze all submitted files. If they are found to be trustworthy, they will be added to the Comodo safe list (i.e. white-listed). Conversely, if they are found to be malicious then they will be added to the database of virus signatures (i.e. black-listed).

Note: Quarantined files are stored using a special format and do not constitute any danger to your computer.

2.6. View CIS Logs

•

CIS maintains a log of events which can be viewed at anytime by clicking 'View Logs' from the General Tasks interface.

The Log Viewer module opens with its home screen displaying a summary of CIS events:

COMODO Creating Trust Online*

Sho	ow Home 🔽 🛨 🗴	0	
	Security Events	Protection	
	†	Infections Prevented:	2
		Unknown programs bloo	cked: 2
		Suspicious activities blo	ocked: 0
Events	62.8%	Network Activities block	ed: 1
EL OI	9.3%	Cloud	
Number of		Good files detected:	1236
Z		Bad files detected:	6
	Event Turse	Submitted files:	6
	Event Types Antivirus Events	Updates	
	Antivirus Events Defense+ Events	Last Update:	09.26.2013 10:34 AM
	Firewall Events	Program Version:	6.3.294226.2933

The left hand side of the home screen displays a bar graph showing a comparison of the Antivirus events, Firewall events and Defense+ events. The right hand side displays a statistical summary of the Antivirus, Firewall and Defense+ events, the results of cloud based scanning of your system and the version and update information of the CIS installation on your system.

- The interface contains a full history of logged events of Firewall, Defense+ and Antivirus modules. Select the module from the 'Show' drop-down at the top left to display that log type in the main window.
- To open a pre-exported/stored log file, click the open button where the cis log file is stored
- beside the drop-down and browse to the location

- To clear the logs, click the clear button
- To refresh the logs, click the Refresh button

Click the following links for more explanations of the options available for each type of filter:

2.6.1. Antivirus Logs

Comodo Antivirus documents the results of all actions performed by it in extensive but easy to understand reports. A detailed scan report contains statistics of all scanned objects, settings used for each task and the history of actions performed on each individual file. Reports are also generated during real-time protection, and after updating the antivirus database and application modules.

The Antivirus logs can be viewed by selecting 'Antivirus Events' from the Show drop-down of the log viewer interface. Alternatively, the Antivirus log screen can be accessed by clicking the number beside 'Detected Threats' in the Advanced View of the Home screen in the Antivirus pane.

COMODO View Logs

Date	Location	Malware Name	Action	Status	Alert

Ð

Column Descriptions

- 1. Date Indicates the date of the event.
- 2. Location Indicates the location where the application detected with a threat is stored.
- 3. Malware Name Name of the malware event that has been detected.
- 4. Action Indicates action taken against the malware through Antivirus.
- 5. Status Gives the status of the action taken. It can be either 'Success' or 'Fail'.
- 6. **Alert** Gives the details of the alert displayed for the event
- To export the Antivirus logs as a HTML file click the 'Export' button
- To open a stored CIS log file, click the 'Open' button

- To refresh the Antivirus logs, click the 'Refresh' button
- To clear the Antivirus logs click the 'Clear' button

2.6.1.1. Filtering Antivirus Logs

Comodo Internet Security allows you to create custom views of all logged events according to user defined criteria. You can use the following types of filters:

- Preset Time Filters
- Advanced Filters

Preset Time Filters:

Clicking on the handle at the bottom enables you to filter the logs for a selected time period:

12/3/2012 🤴 c:\probab	ly_inf ApplicUnwnt@42949	67295 Ignore S	Success
12/3/2012 📽 c:\proba	Please select period	Today	ccess
12/3/2012 📽 c:\proba	from: 12/03/2012 💌	Current Week	ccess <u>Related alert</u>
12/3/2012 🔳 c:\proba	to: 12/03/2012 💌	E Current Month	ccess

- Today Displays all logged events for today.
- **Current Week** Displays all logged events during the current week. (The current week is calculated from the Sunday to Saturday that holds the current date.)
- Current Month Displays all logged events during the month that holds the current date.
- Entire Period Displays every event logged since Comodo Internet Security was installed. (If you have cleared the log history since installation, this option shows all logs created since that clearance).
- Custom Filter Enables you to select a custom period by choosing the 'From' and 'To' dates under 'Please Select Period'

Advanced Filters:

Having chosen a **preset time filter**, you can further refine the displayed events according to specific filters. Following are available filters for Antivirus logs and their meanings:

- Action Displays events according to the response (or action taken) by the Antivirus
- Location Displays only the events logged from a specific location
- Malware Name Displays only the events logged corresponding to a specific malware
- Status Displays the events according to the status after the action taken. It can be either 'Success' or 'Fail'

To configure Advanced Filters for Antivirus events

- 1. Click the funnel button I from the title bar. The Advanced Filter interface for AV events will open
- 2. Select the filter from the 'Advanced Filter' drop-down and click 'Add' to apply the filter.

Ο Ο Ο Ο Ο Ο Ο	dvanced Filter		×
	Action Action Location Malware Name Status		
	Apply	Cancel	

You have 4 categories of filters that you can add. Each of these categories can be further refined by either selecting or deselecting specific filter parameters or by the user typing a filter string in the field provided. You can add and configure any number of filters in the 'Advanced Filter' dialog.

Following are the options available in the 'Advanced Filter' drop-down:

 Action: The 'Action' option allows you to filter the entries based on the actions taken by CIS against the detected threat. Selecting the 'Action' option displays a drop down field and a set of specific filter parameters that can be selected or deselected.

соморо	Advanced Filter			? X
Advanced Filter	Action	Y Add		
Action	Not Equal Equal Not Equal	 ✓ Quarantine ☐ Ignore △ Ask ✓ Block 	□ Remove✓ Detect□ Restore	×
			Apply	Cancel

- a) Select 'Equal' or 'Not Equal' option from the drop down. 'Not Equal' will invert your selected choice.
- b) Now select the checkboxes of the specific filter parameters to refine your search. The parameter available are:
 - Quarantine: Displays events where the user chose to quarantine a file
 - · Remove: Displays events where the user chose to delete an item
- Ignore: Displays events where the user chose to ignore an item
- · Detect: Displays events for detection of a malware
- Ask: Displays events when user was asked by alert concerning some Defense+, Firewall or Antivirus event
- Restore: Displays events of the applications that were quarantined and restored
- Block: Displays events of the applications that were blocked

For example, if you checked the 'Quarantine' box then selected 'Not Equal', you would see only those Events where the Quarantine Action was not selected at the virus notification alert.

ii. **Location**: The 'Location' option enables you to filter the log entries related to events logged from a specific location. Selecting the 'Location' option displays a drop-down field and text entry field.

сомодо А	dvanced Filter				? X
Advanced Filter	Location	*	+ Add		
Location	Contains	*	c:\samples\		×
				Apply	Cancel

- a) Select 'Contains' or 'Does Not Contain' option from the drop-down field.
- b) Enter the text or word that needs to be filtered.

For example, if you select 'Contains' option from the drop-down field and enter the phrase 'C:\Samples\' in the text field, then all events containing the entry 'C:\Samples\' in the Location field will be displayed. If you select 'Does Not Contain' option from the drop-down field and enter the phrase 'C:\Samples\' in the text field, then all events that do not have the entry 'C:\Samples\' will be displayed.

 Malware Name: The 'Malware Name' option enables you to filter the log entries related to specific malware. Selecting the 'Malware Name' option displays a drop-down field and text entry field.

COMODO Creating Trust Online*

	dvanced Filter			? X
Advanced Filter	Malware Name	Add		×
Malware Name	Contains Contains Does Not Contain	bluto_force		
			Apply	Cancel

- a) Select 'Contains' or 'Does Not Contain' option from the drop-down field.
- b) Enter the text in the name of the malware that needs to be filtered.

For example, if you select 'Contains' option from the drop-down field and enter the phrase 'bluto-force' in the text field, then all events containing the entry 'bluto-force' in the Malware Name field will be displayed. If you select 'Does Not Contain' option from the drop-down field and enter the phrase 'bluto-force' in the text field, then all events that do not have the entry 'bluto-force' in the 'Malware Name' field will be displayed.

iv. Status: The 'Status' option allows you to filter the log entries based on the success or failure of the action taken against the threat by CIS. Selecting the 'Status' option displays a drop-down field and a set of specific filter parameters that can be selected or deselected.

	dvanced Filter			? X
Advanced Filter	Status	Y + Add		
Status	Equal Equal Not Equal	Success	🗖 Failure	×
			Apply	Cancel

- a) Select 'Equal' or 'Not Equal' option from the drop-down field. 'Not Equal' will invert your selected choice.
- b) Now select the checkboxes of the specific filter parameters to refine your search. The parameter available are:
 - Success: Displays Events that successfully executed (for example, the malware was successfully quarantined)
 - Failure: Displays Events that failed to execute (for example, the database malware was not disinfected)

Note: More than one filter can be added in the 'Advanced Filter' pane. After adding one filter type, select the next filter type and click 'Add'. You can also remove a filter type by clicking the 'X' button at the top right of the filter pane.

 Click 'Apply' for the filters to be applied to the Antivirus log viewer. Only those entries selected based on your set filter criteria will be displayed in the log viewer.

2.6.2. Firewall Logs

Comodo Internet Security records a history of all actions taken by the firewall. Firewall 'Events' are generated and recorded for various reasons - including whenever an application or process makes a connection attempt that contravenes a rule in your **Rule sets** or whenever there is a change in Firewall configuration.

The Firewall logs can be viewed by selecting 'Firewall Events' from the 'Show' drop-down of the log viewer interface. Alternatively, the Firewall log screen can be accessed by clicking the number beside 'Network Intrusions' in the Advanced View

of the Home screen in the Firewall pane.

Show	Firewall Events	· •	+	×	₽ Q				
Date	Application	Action	Та	Prot	Source	Sour	Destinati	Destination	Ale
09/17/	🛋 C:\Program	Bloc	Out	TCP	192.1	1273	74.125.236	80	
09/17/	🛋 C:\Program	Bloc	Out	тср	192.1	1269	111.119.15	80	
09/17/	🖴 C:\Program	Bloc	Out	TCP	192.1	1265	74.125.236	80

					192.1	1263	111.119.15	80	
					~				

Column Descriptions

- 1. Date Contains precise details of the date and time of the connection attempt.
- 2. **Application** Indicates which application or process propagated the event. If the application has no icon, the default system icon for executable files are used
- 3. Action Contains the flags attached to the events, indicating how the firewall has reacted to the connection attempt.
- 4. Target Indicates whether the connection attempt is inbound or outbound.
- 5. **Protocol** Represents the Protocol used by the application that attempted to create the connection. This is usually TCP/IP or UDP which are the most heavily used networking protocols.
- 6. **Source IP** States the IP address of the host that made the connection attempt. This is usually the IP address of your computer for outbound connections.
- 7. Source Port States the port number on the host at the source IP which was used to make this connection attempt.
- 8. Destination IP States the IP address of the host to which the connection attempt was made. This is usually the IP address of your computer for inbound connections.
- 9. **Destination Port** States the port number on the host at the destination IP to which the connection attempt was made.

Ð

- 10. Alert Gives the details of the alert displayed for the event
- To export the Firewall logs as a HTML file click the Export button

- To open a stored CIS log file, click the Open button
- To refresh the Firewall logs, click the Refresh button
- To clear the Firewall logs click the Clear button

2.6.2.1. Filtering Firewall Logs

Comodo Internet Security allows you to create custom views of all logged events according to user defined criteria. You can use the following types of filters:

- Preset Time Filters
- Advanced Filters

Preset Time Filters:

Clicking on the handle at the bottom enables you to filter the logs for a selected time period:

Please select period Today from: 10/30/2012 Current Week	
from: 10/30/2012 V E Current Week	
to: 12/03/2012 💌 🖆 Current Month	
Entire Period	
CI	ose

- Today Displays all logged events for today.
- Current Week Displays all logged events during the current week. (The current week is calculated from the Sunday to Saturday that holds the current date.)
- Current Month Displays all logged events during the month that holds the current date.
- Entire Period Displays every event logged since Comodo Internet Security was installed. (If you have cleared the log history since installation, this option shows all logs created since that clearance).
- Custom Filter Enables you to select a custom period by choosing the 'From' and 'To' dates under 'Please Select Period'

Advanced Filters

Having chosen a **preset time filter**, you can further refine the displayed events according to specific filters. Following are available filters for Firewall logs and their meanings:

- Action Displays events according to the response (or action taken) by the firewall
- Application Displays only the events propagated by a specific application
- Destination IP Displays only the events with a specific target IP address
- Destination Port Displays only the events with a specific target port number

- Direction Displays only the events of Inbound or Outbound nature
- Protocol Displays only the events that involved a specific protocol
- Source IP address Displays only the events that originated from a specific IP address
- · Source Port Displays only the events that originated from a specific port number

To configure Advanced Filters for Firewall events

- 1. Click the funnel button in from the title bar. The Advanced Filter interface for Firewall events will open.
- 2. Select the filter from the 'Advanced Filter' drop-down and click 'Add' to apply the filter.

СОМОДО А	Ivanced Filter		×
Advanced Filter	Action Action Application Destination IP Destination Port Direction Protocol Source IP Source Port		
	Apply	ancel	

You have 8 categories of filters that you can add. Each of these categories can be further refined by either selecting or deselecting specific filter parameters or by the user typing a filter string in the field provided. You can add and configure any number of filters in the 'Advanced Filter' dialog.

Following are the options available in the 'Advanced Filter' drop-down:

i. Action: Selecting the 'Action' option displays a drop-down box and a set of specific filter parameters that can be selected or deselected.

	d∨anced Filter			? X
Advanced Filter	Action	+ Add		
Action	Equal	 Blocked Allowed 	 Asked Suppressed 	×

			Apply	Cancel

- a) Select any one of the following option the drop-down box.
 - Equal
 - Greater than
 - Greater than or Equal
 - Less than
 - Less than or Equal
 - Not Equal

b) Now enter the source port number in the text entry field.

Note: More than one filter can be added in the 'Advanced Filter' pane. After adding one filter type, select the next filter type and click 'Add'. You can also remove a filter type by clicking the 'X' button at the top right of the filter pane.

 Click 'Apply' for the filters to be applied to the Firewall log viewer. Only those entries selected based on your set filter criteria will be displayed in the log viewer.

2.6.3. Defense+ Logs

Comodo Internet Security records a history of all actions taken by Defense+. Defense+ 'Events' are generated and recorded for various reasons. Examples include changes in HIPS settings, when an application is auto-sandboxed by Behavior Blocker, when an application or process attempts to access restricted areas or when an action occurs that contravenes your **HIPS Rulesets**.

The Defense+ logs can be viewed by selecting ' Defense+ Events' tab from the 'Show' drop-down of the log viewer interface. Alternatively, the Defense+ log screen can be accessed by clicking the number beside 'Blocked Intrusions' in the Advanced View of the Home screen in the Auto-Sandbox pane.

Show Defens	se+Events	+ × 🗗	0

12/3/2012 2:	C:\scripts\check_IE.vbs	Modify File	C:\WINDOWS\system32\w	

Column Descriptions

- 3. Date Contains precise details of the date and time of the access attempt.
- 4. **Application** Indicates which application or process propagated the event. If the application has no icon, the default system icon for executable files are used.
- 5. Flags Indicates flags set for the kinds of actions against the event triggered by the file.

COMODO Creating Trust Online*

- 6. Target Represents the location of the target file.
- 7. Alert Gives the details of the alert displayed for the event
- To export the Defense+ logs as a HTML file click the 'Export' button
- To open a stored CIS log file, click the 'Open' button
- To refresh the Defense+ logs, click the 'Refresh' button
- To clear the Defense+ logs click the 'Clear' button

2.6.3.1. Filtering Defense+ Logs

Comodo Internet Security allows you to create custom views of all logged events according to user defined criteria. You can use the following types of filters:

Ð

- Preset Time Filters
- Advanced Filters

Preset Time Filters

Clicking on the handle at the bottom enables you to filter the logs for a selected time period:

		idadiy_mected_i Scanne			
12/3/2012 2:	遼 C:\s	Please select period	Today		
12/3/2012 2:	遼 C:\s	from: 09/22/2011 💌	Current Week	m32\s	
12/3/2012 2:	📓 C:\s	to: 12/04/2012 💌	E Current Month	m32\w	
					~
				С	Close

- Today Displays all logged events for today.
- **Current Week** Displays all logged events during the current week. (The current week is calculated from the Sunday to Saturday that holds the current date.)
- Current Month Displays all logged events during the month that holds the current date.
- Entire Period Displays every event logged since Comodo Internet Security was installed. (If you have cleared the log history since installation, this option shows all logs created since that clearance).
- Custom Filter Enables you to select a custom period by choosing the 'From' and 'To' dates under 'Please Select Period'

Advanced Filters

Having chosen a **preset time filter** from the top panel, you can further refine the displayed events according to specific filters. Following are available filters for Defense+ logs and their meanings:

- Application Displays only the events propagated by a specific application
- Flags Displays events according to the response (or action taken) by Defense+
- Target Displays only the events that involved a specified target application

To configure Advanced Filters for Defense+ events

- 1. Click the funnel button from the title bar. The Advanced Filter interface for Defense+ events will open.
- 2. Select the filter from the 'Advanced Filter' drop-down and click 'Add' to apply the filter.

ΟΟΜΟΟ Αι	dvanced Filter			? X
Advanced Filter	Application Application Flags Target	+ Add		
			Apply	Cancel

You have 3 categories of filter that you can add. Each of these categories can be further refined by either selecting or deselecting specific filter parameters or by the user typing a filter string in the field provided. Following are the options available in the 'Advanced Filter' drop-down:

i. Application: Selecting the 'Application' option displays a drop-down field and text entry field.

С		dvanced Filter						×
	Advanced Filter	Application	*	+ Add				
	Application	Contains Contains Does Not Contain	✓	cuckoomp3.exe			×	ר
					Apply	Can	cel	

- a) Select 'Contains' or 'Does Not Contain' option from the drop-down menu.
- b) Enter the text or word that needs to be filtered.

For example, if you select 'Contains' option from the drop-down field and enter the phrase 'cuckoomp3.exe' in the text field, then all events containing the entry 'cuckoomp3.exe' in the 'Application' column will be displayed. If you select 'Does Not Contain' option from the drop-down field and enter the phrase 'cuckoomp3.exe' in the text field, then all events that do not have the entry 'cuckoomp3.exe' in the 'Application' column will be displayed.

ii. **Flags**: Selecting the 'Flags' option displays a drop down menu and a set of specific filter parameters that can be selected or deselected.

COMODO Creating Trust Online

	dvanced Filter		?	×
Advanced Filter	Flags 🗸	+ Add		
		✓ Sandboxed As → Scanned Online and Found	Scanned Online and Found Safe	ך 🍳
		Malicious Create Process Modify Key	 Access Memory Terminate Process Modify File 	
Flag	Equal	 Direct Memory Access Direct Keyboard Access 	 Direct Disk Access Direct Monitor Access 	
	Not Equal	 Load Driver Instal Hook Execute Image 	 Send Message Access COM Interface DNS/RPC Client Access 	
		 Change Defence+ Mode Block File 	Shellcode Injection Suspicious	
			Apply Cancel	

- c) Select 'Equal' or 'Not Equal' option from the drop down menu. 'Not Equal' will invert your selected choice.
- d) Now select the check-boxes of the specific filter parameters to refine your search. The parameter available are:
 - Sandboxed As
 - Scanned Online and Found Safe
 - Scanned Online and Found Malicious
 - Access Memory
 - Create Process
 - Terminate Process
 - Modify Key
 - Modify File
 - Direct Memory Access
 - Direct Disk Access
 - Direct Keyboard Access
 - Direct Monitor Access
 - Load Driver
 - Send Message
 - Install Hook
 - Access COM Interface
 - Execute Image
 - DNS/RPC Client Access
 - Change Defense+ Mode
 - Shellcode Injection
 - Block File
 - Suspicious
 - Hook
 - Alert Suppressed

For example, if you select 'Equal' option from the drop-down field and select 'Sandboxed as' from the checkboxes, , then only events of applications auto-sandboxed by Behavior Blocker will be displayed. If you select 'Not Equal' option from the drop-down field and select 'Modify Key' check box, then all events that do not have the entry 'Modify Key' in the 'Flags' column will be displayed. You can select more than one check box options from this interface, as required.

iii. Target: Selecting the 'Target' option displays a drop-down menu and text entry field.

	dvanced Filter				? X
Advanced Filter	Target	*	+ Add		
Target	Contains	~	svchost.exe		×
	Contains Does Not Contain	¢			
				Apply	Cancel

- a) Select 'Contains' or 'Does Not Contain' option from the drop-down menu.
- b) Enter the text or word that needs to be filtered from the Target column.

For example, if you select 'Contains' option from the drop-down field and enter the phrase 'svchost.exe' in the text field, then all events containing the entry 'svchost.exe' in the 'Target' column will be displayed. If you select 'Does Not Contain' option from the drop-down field and enter the phrase 'svchost.exe' in the text field, then all events that do not have the entry 'svchost.exe' in the 'Target' column will be displayed.

Note: More than one filter can be added in the 'Advanced Filter' pane. After adding one filter type, select the next filter type and click 'Add'. You can also remove a filter type by clicking the 'X' button at the top right of the filter pane.

Click 'Apply' for the filters to be applied to the Firewall log viewer. Only those Defense+ entries selected based on your set filter criteria will be displayed in the log viewer.

2.6.4. 'Alerts' Logs

CIS maintains a history of pop-up security alerts generated by its Antivirus, Firewall and Defense+ components and the actions taken against the threats discovered, depending on the response to the alerts by the user.

The Alerts logs can be viewed by selecting 'Alerts' from the 'Show' drop-down of the log viewer interface.

COMODO Creating Trust Online*

				~					~

Column Descriptions

- 1. Date Contains precise details of the date and time of the alert generation.
- 2. **Type -** Indicates the type of the alert, whether it is a, Antivirus, Firewall or Defense+ (HIPS, Behavior Blocker or Auto-Sandbox) alert.
- 3. **Description** Brief description of the file or the event that triggered the alert.
- 4. Advice Advice offered by CIS on how to respond for the alert.
- 5. **Answered** Indicates whether the alert has been answered by the user and if answered, contains precise details of the date and time of response from the user.
- 6. Answer Indicates the response given by the user.
- 7. Flags Indicates flags set for the kinds of actions against the event triggered by the file.
- 8. Treat As Based on the response how the file is treated, whether it is treated as a safe application, installer and so on.
- 9. Event Clicking 'Related Event' opens the details of the event that has triggered the alert.
- To export the Alerts logs as a HTML file click the 'Export' button
- To open a stored CIS log file, click the 'Open' button
- To refresh the Alerts logs, click the 'Refresh' button
- To clear the Alerts logs click the 'Clear' button

2.6.4.1. Filtering 'Alerts Displayed' Logs

Comodo Internet Security allows you to create custom views of all logged events according to user defined criteria. You can use the following types of filters:

- Preset Time Filters
- Advanced Filters

Preset Time Filters

Clicking on the handle at the bottom enables you to filter the logs for a selected time period:

12/4/2 Antivir	App Please select period Today	Related event
12/4/2 Antivir	App from: 12/01/2012 💌 🛅 Current Week	Related event
12/4/2 Firew	deph to: 12/04/2012 💌 🖻 Current Month	Related event
		Close

- Today Displays all logged events for today.
- **Current Week** Displays all logged events during the current week. (The current week is calculated from the Sunday to Saturday that holds the current date.)
- Current Month Displays all logged events during the month that holds the current date.
- Entire Period Displays every event logged since Comodo Internet Security was installed. (If you have cleared the log history since installation, this option shows all logs created since that clearance).
- Custom Filter Enables you to select a custom period by choosing the 'From' and 'To' dates under 'Please Select Period'

Advanced Filters

You can further refine the displayed events according to specific filters. Following are available filters for 'Alerts' logs and their meanings:

- Advice: Displays only the log of alerts that matches the advice entered
- Answer: Displays only the log of alerts that were answered by you with the selected response
- Answered Displays only the log of alerts that were answered on a selected date and time
- Description: Displays only the log of alerts that matches the description entered
- Flags: Displays only the log of alerts based on the selected flags set for the corresponding events
- · Treat As: Displays only the log of alerts based on their 'Treat As' response you entered in the pop-up alert
- **Type:** Displays only the log of alerts of selected type. They can be Antivirus, Firewall or Defense+ (HIPS, Behavior Blocker or Auto-Sandbox) alerts.

To configure Advanced Filters for Alerts Displayed

1. Click the funnel button I from the title bar. The Advanced Filter interface for 'Alerts' logs will open.

2. Select the filter from the 'Advanced Filter' drop-down and click 'Add' to apply the filter.

	Ivanced Filter				? X
Advanced Filter	Advise Advise Answer Answered Description Flags Treat As Type	▶	+ Add		
				Apply	Cancel

You have 7 categories of filters that you can add. Each of these categories can be further refined by either selecting or deselecting specific filter parameters or by the user typing a filter string in the field provided. You can add and configure any number of filters in the 'Advanced Filter' dialog.

Following are the options available in the 'Add' drop down menu:

i. Advice: The 'Advise' option enables you to filter the alerts based on advices given by CIS in the alert. Selecting the 'Advice' option displays a drop-down field and text entry field.

соморо	Advanced Filter					×
Advanced Filter	Advise	*	+ Add			
Advise	Contains Contains Does Not Contain	✓	you can safely allow this request		×	
				Apply	Cancel	

- a) Select 'Contains' or 'Does Not Contain' option from the drop-down menu.
- b) Enter the text or word as your filter criteria.

For example, if you select 'Contains' option from the drop-down field and enter the phrase 'you can safely allow this request' in the text field, then only the entries containing 'you can safely allow this request' in the 'Advise' column will be displayed.

 Answer: The 'Answer' option enables you to filter the alerts based on how you answered for the alerts. Selecting the 'Answer' option displays a drop-down box and a set of specific filter parameters that can be selected or deselected.

COMODO Creating Trust Online

		🗹 Av Update	🔲 Av Scan
Туре	Equal	🚬 📃 Log Clearing	Guarantee Activation
	Equal	Upgrade	
	Not equal		
			Apply Cancel

- a) Select 'Equal' or 'Not Equal' option from the drop down menu. 'Not Equal' will invert your selected choice.
- b) Now select the check-boxes of the specific filter parameters to refine your search. The parameter available are:
 - AV virus signature database update
 - AV Scan
 - Clearing Logs
 - Activation of guarantee
 - Version upgrade

Note: More than one filter can be added in the 'Advanced Filter' pane. After adding one filter type, select the next filter type and click 'Add'. You can also remove a filter type by clicking the 'X' button at the top right of the filter pane.

 Click 'Apply' for the filters to be applied to the Tasks log viewer. Only those entries selected based on your set filter criteria will be displayed in the log viewer.

2.6.6. Configuration Changes

CIS keeps track of all the changes made to its configuration since its installation. The 'Configuration Changes' log viewer displays a list of changes to various options and other configuration changes made to the application.

The 'Configuration Changes' logs can be viewed by selecting 'Configuration Changes' from the 'Show' drop-down of the log

COMODO Creating Trust Online*

? _ 🗖 COMODO View Logs 0 Ŧ ÷ × Ð Show **Configuration Changes** Old Value New Value Date Action Modifier Object Name Sandbox: ... 12/3/20... Off On Option Ch... User 12/3/20... Option Ch... viewer interface.

Column Descriptions

- 1. Date Contains precise details of the date and time of the configuration change.
- 2. Action Indicates the nature of the configuration change.
- 3. Modifier Indicates the user that has made the configuration change.
- 4. Object Indicates the CIS object that was affected by the configuration change.
- 5. **Name** Indicates the parameter changed.
- 6. **Old value** Indicates the value of the parameter before the configuration change.
- 7. **New value** Indicates the value of the parameter after the configuration change.
- To export the Configuration Changes logs as a HTML file click the 'Export' button
- To open a stored CIS log file, click the 'Open' button
- To refresh the Configuration Changes logs, click the 'Refresh' button
- To clear the Configuration Changes logs click the 'Clear' button

2.6.6.1. Filtering 'Configuration Changes' Logs

Comodo Internet Security allows you to create custom views of all logged events according to user defined criteria. You can use the following types of filters:

- Preset Time Filters
- Advanced Filters

Preset Time Filters

Clicking on the handle at the bottom enables you to filter the log entries for a selected time period:

	ddec Please select period	Today	C:\Docume
12/3/20 Option C	h from: 11/22/2012 💌	🖆 Current Week	On
12/3/20 Option C	to: 12/04/2012 💌	Current Month	Stateful
			Close

- Today Displays all logged events for today.
- **Current Week** Displays all logged events during the current week. (The current week is calculated from the Sunday to Saturday that holds the current date.)
- Current Month Displays all logged events during the month that holds the current date.
- Entire Period Displays every event logged since Comodo Internet Security was installed. (If you have cleared the log history since installation, this option shows all logs created since that clearance).
- Custom Filter Enables you to select a custom period by choosing the 'From' and 'To' dates under 'Please Select Period'

Advanced Filters

You can further refine the displayed events according to specific filters. Following are available filters for 'Configuration Changes' logs and their meanings:

- Action: Displays only the selected type of configuration change(s) like change in options, addition of objects, strings and so on.
- **Modifier:** Displays only the configuration changes effected by the selected entity like the user, response to Antivirus, Firewall or Defense+ Alerts and so on.
- Name: Displays only the configuration change with the name entered as search criteria.
- Object: Displays only the configuration changes on addition or removal of selected objects

To configure Advanced Filters for Configuration Changes Logs

- 1. Click the funnel button from the title bar. The Advanced Filter interface for 'Configuration Changes' logs will open.
- 2. Select the filter from the 'Advanced Filter' drop-down and click 'Add' to apply the filter.

COMODO Creating Trust Online

	dvanced Filter					? X
Advanced Filter	Modifier Action Modifier Name Object	~	+	Add		
					Apply	Cancel

You can chose the category of filter from the 'Advanced Filter' drop-down. Each of these categories can be further refined by either selecting or deselecting specific filter parameters or by the user typing a filter string in the field provided. Following are the options available in the 'Add' drop down menu:

 Action: The 'Action' option allows you to filter the log entries based on the actions executed like change in options, addition of objects, strings and so on. Selecting the 'Action' option displays a drop-down box and a set of specific filter parameters that can be selected or deselected.

соморс	Advanced Filter				? X
Advanced Filt	ter Action	~	+ Add		
Action	Equal Equal	~ ∖₹	 Object Added Object Removed String Added 	 Object Changed Option Changed String Removed 	×
	Not equal			Apply C	ancel

- a) Select 'Equal' or 'Not Equal' option from the drop-down box. 'Not Equal' will invert your selected choice.
- b) Now select the checkboxes of the specific filter parameters to refine your search. The parameters available are:
 - Object Added
 - Object Changed
 - Object Removed
 - Option Changed
 - String Added
 - String Removed

For example, if you have selected Equal in the drop-down and selected 'Object Added' checkbox, then, only the log entries with the value 'Object Added' in the 'Action' column will be displayed.

ii. **Modifier**: The 'Modifier' option allows you to filter the log entries based on the entity that is responsible for the configuration change. It can be the user or the response given to an alert. Selecting the 'Modifier' option displays a drop-down box and a set of specific filter parameters that can be selected or deselected.

COMODO Creating Trust Online*

	×
User	Auto Learn
Modifier Equal Antivirus Alert	Firewall Alert
🗌 Defense+ Alert	Behavior Blocker Alert

- a) Select 'Equal' or 'Not Equal' option from the drop-down box. 'Not Equal' will invert your selected choice.
- b) Now select the checkboxes of the specific entities that has effected the change, to refine your search. The parameters available are:
 - User
 - Auto Learn
 - Antivirus Alert
 - Firewall Alert
 - Defense+ Alert
 - Behavior Blocker Alert

For example, if you have selected Equal in the drop-down and selected 'Antivrius Alert ' checkbox, then, only the log entries related to the configuration changes effected by responses to Antivirus Alerts will be displayed.

iii. Name: The 'Name' option allows you to filter the log entries by entering the name of the parameter changed. Selecting the 'Name' option displays a drop-down field and text entry field.

соморо	Advanced Filter		? X
Advanced Filter	Name 🖌 Add		
Name	Contains Contains Does Not Contain		×
		Apply	Cancel

- a) Select 'Contains' or 'Does Not Contain' option from the drop-down menu.
- b) Enter the name of the change, partly or fully as filter criteria in the text box.
- iv. Object: The 'Object' option enables you to filter the log entries related to the objects modified during the configuration change. Selecting the 'Object' option displays a drop down menu and the objects of CIS configuration, that can be selected or deselected.

COMODO Creating Trust Online

COMODO Advanced Filter		? ×

		Apply Cancel

- a) Select 'Equal' or 'Not Equal' option from the drop down menu. 'Not Equal' will invert your selected choice.
- b) Now select the check-boxes of the specific objects as filter parameters to refine your search. Scroll the window to the right to see all the parameters options.

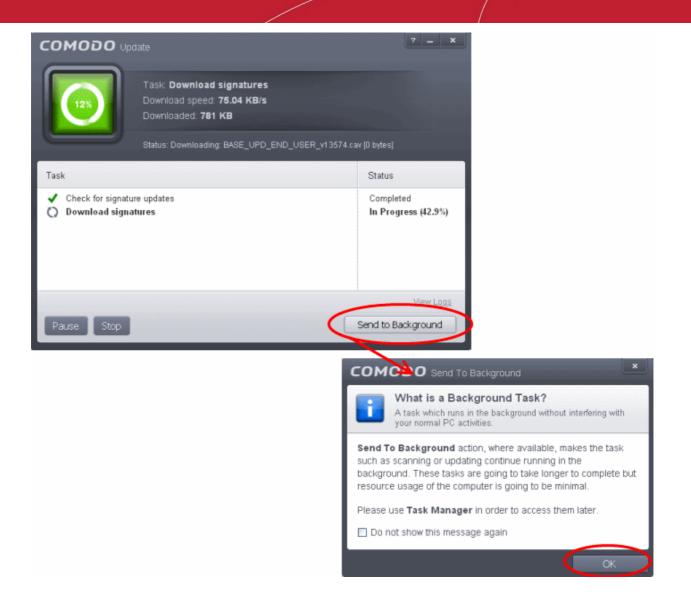

Note: More than one filter can be added in the 'Advanced Filter' pane. After adding one filter type, select the next filter type and click 'Add'. You can also remove a filter type by clicking the 'X' button at the top right of the filter pane.

Click 'Apply' for the filters to be applied to the Configuration Changes log viewer. Only those entries selected based on your set filter criteria will be displayed in the log viewer.

2.7. Manage CIS Tasks

Comodo Internet Security has the ability to concurrently run several tasks like on-demand or scheduled scans, virus signature database updates and so on. The tasks that are currently run, can be sent to background from the progress interface, by clicking Send to Background as shown in the example below.

COMODO Creating Trust Online*

These tasks can be managed, through the Task manager interface that can be accessed at anytime by clicking Open Task Manager from the General Tasks interface.

COMODO Creating Trust Online*

Q Search T	asks		Home 有
General Ta	sks		
	Scan Scan your computer for viruses and spyware.	View Log View a rec and alerts	IS ord of security events, activity
Ø	Update Run the updater to check for program and virus database updates.	Open the t	sk Manager ask manager to view running sks in progress.
0	View Quarantine View and manage threats quarantined by virus scanner.		nnections cations which are connected to t

Tip: The Task Manager can also be opened by clicking on the center tab in the Status row of the widget , that displays the number of tasks that are currently running.

The Task Manager window displays a list of background tasks that are currently running with the details of time elapsed on each task, status and priority.

COMODO Task Manager				? X

2.8. View Active Internet Connections

The 'View Connections' interface displays an at-a-glance summary of all currently active Internet connections on a per-

application basis. You can view all the applications that are connected; all the individual connections that each application is responsible for; the direction of the traffic; the source IP and port and the destination IP and port. You can also see the total amount of traffic that has passed in and out of your system over each connection.

This list is updated in real time whenever an application creates a new connection or drops an existing connection. The 'View Connections' is an extremely useful aid when testing firewall configuration; troubleshooting new firewall policies and rules; monitoring the connection activity of individual applications and your system as a whole and for terminating any unwanted connections.

The 'View active Connections' interface can be accessed by clicking 'View Connections' from the 'General Tasks' interface. Alternatively, this screen can be accessed by clicking the number above Inbound or Outbound in the Advanced View of the Home screen in the Firewall pane.

The 'View Connections' interface displays list of all the currently active Internet connections by initiated by various applications as a Tree structure.

COMODO Creating Trust Online*

- If you wish to view the full path of the application, right click on the application name and select 'Show Full Path'.
- If you wish to terminate a connection belonging to an application, right click on the specific connection and click 'Terminate Connection'.

Identify and Kill Unsafe Network Connections

KillSwitch is an advanced system monitoring tool that allows users to quickly identify, monitor and terminate any unsafe processes and network connections that are running on their system. Apart from offering unparalleled insight and control over computer processes and connections, KillSwitch provides you with yet another powerful layer of protection for Windows computers.

Comodo KillSwitch can show ALL running processes with their granular details– exposing even those that were invisible or very deeply hidden. It allows you to identify which of those running processes are unsafe and to shut them all down with a single click. You can also use Killswitch to trace back to the malware that generated the process.

Comodo KillSwitch can be directly accessed from the 'View Connections' by clicking the 'More' button.

□ 🗷 E:\Program Files\COMODO\COMODO Internet Security\cmdagent.exe [1996]					
🚪 🗉 C:\Program Files\Bluto Force\Bluto_Efforts.exe [1552]					
ICMP OUT	192.168.199.78:0	175.38.211.162:0	302 B	0 B

If Comodo KillSwitch is already installed in your computer, clicking 'More' will open the application. If not, CIS will download and install Comodo Killswitch. Once installed, clicking this button in future will open the Killswitch interface.

COMODO Install		_ ×			
Install Required Packages The feature requires installation of additional packages.					
The following must be downloaded and installed:					
Package Name	License Agreement	Size			
COMODO Killswitch	View License Agreement	6.41 MB			
By pressing "Agree and Install", you agree with user license agreements for all the packages listed above.					
	Agr	ee and Install			

Read the license agreement by clicking 'View License Agreement' and click 'Agree and Install'. CIS will download and install the application.

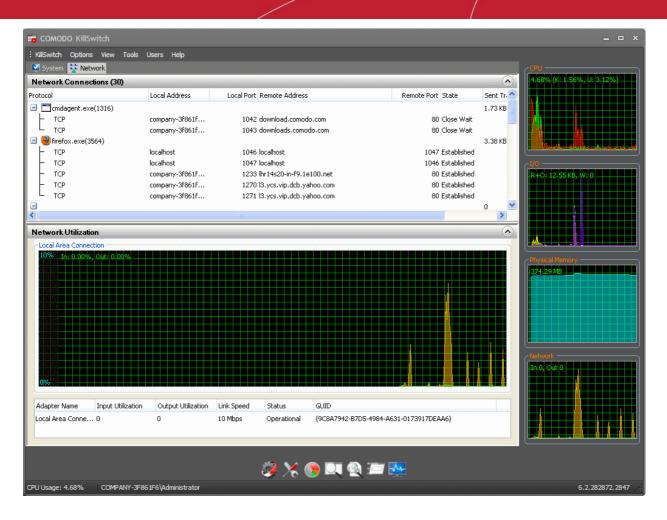

.

COMODO Creating Trust Online

On completion of installation, the Comodo KillSwitch main interface will be opened. Clicking the Network tab will display the the Network Connections and Network Utilization panes.

COMODO Creating Trust Online

- Details of how to use KillSwitch to view granular details on current network connections and terminate unsafe connections can be found at http://help.comodo.com/topic-119-1-328-3577-Viewing-and-Handling-Network-Connections-and-Usage.html.
- The complete user guide for Comodo KillSwitch is available at http://help.comodo.com/topic-119-1-328-3518-introduction-to-KillSwitch.html

2.9. View Active Process List

The Active Process List interface displays all currently active processes initiated by applications that are currently running in the sandbox environment. By tracing an application's parent process, CIS can detect whether a non-trusted application is attempting to spawn an already trusted application and thus deny access rights for that trusted application. This system provides the very highest protection against Trojans, malware and rootkits that try to use trusted software to launch an attack. By default, the list displays the processes of sandboxed applications only, but can be made to display all the processes from the right-click options.

The processes of sandboxed applications include:

- Auto-Sandbox Unrecognized applications are run inside the auto sandbox with access restriction as selected in the 'Auto-sandbox unknown applications as' drop down in Behavior Blocker.
- Run Virtual Applications that are selected and run in Sandbox. Refer to 'Run an Application in the Sandbox' for more details.
- Applications that are run inside the sandbox using the context sensitive menu Click here for more details.
- Running browsers inside the sandbox from the Widget Click here for more details.
- Drag-and-drop applications on to CIS Home Screen Click here for more details.

• Programs that are added manually - Refer to the section 'Configure the Sandbox' for more details.

To view Active Process list

• Click the first box in the third row in the CIS Widget.

• Alternatively, the screen can be accessed by clicking the number beside 'Sandboxed Apps' in the Advanced View of the Home screen in the Defense+ and Sandbox pane.

The Active Processes List	(Sandboxed Only) screen	will be displayed by default.

COMODO Active Processes	List (Sa	andboxed Only)		?	
Application	PID	Company	User Name	Restriction	Rating
🛅 🗉 cmdvirth.exe	2956	COMODO	NT AUTHORITY\S	Fully Virtua	Trusted

If KillSwitch is not yet installed, clicking this button will prompt you to download the application. Refer to the section **Identify and** Kill Unsafe Processes for more details.

3. Firewall Tasks - Introduction

The Firewall component of Comodo Internet Security (hereafter known simply as Comodo Firewall) offers the highest levels of security against inbound and outbound threats, stealths your computer's ports against hackers and blocks malicious software from transmitting your confidential data over the Internet. Comodo Firewall makes it easy for you to specify exactly which applications are allowed to connect to the Internet and immediately warns you when there is suspicious activity.

It can be accessed at all times by clicking on the 'Firewall Tasks' band from the 'Tasks' interface.

The Firewall Tasks area provides easy access to all major features and settings. From here, you can configure Internet access rights per-application, stealth your computer ports, manage available networks and even block all network traffic in and out of your computer. In 'Advanced Settings' you'll be able to specify overall firewall behavior and configure advanced settings such as application rules, rulesets, network zones and port sets.

COMODO Creating Trust Online

Click the links below to see detailed explanations of each area in this section:

- Allow or block Internet access to applications selectively
- Stealth your computer ports
- Manage network connections
- Stop all network activity
- Advanced firewall settings

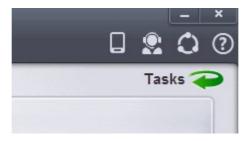

3.1. Allow or Block Internet Access to Applications Selectively

The Firewall Tasks interface allows you to selectively allow or block certain applications from accessing the Internet. These shortcuts represent a convenient way to create an automatic 'Allow Requests' rule or 'Block Requests' rule for individual applications - meaning that inbound and outbound connections are automatically permitted or not permitted to these applications respectively.

To open the 'Firewall Tasks' interface:

٠

Click the 'Tasks' arrow from the CIS home screen:

Click on the 'Firewall Tasks' band from the 'Tasks' interface:

COMODO Creating Trust Online

Home 즂
~
^
Manage Networks Allow or block connections from other computers in detected networks. Stop Network Activity Block all network activity to and from this Pc. Open Advanced Settings Access and configure various firewall configuration options.
~

To allow an application to access to the Internet:

- Click the 'Allow Application' button from the 'Firewall Tasks' interface.
- Navigate to the main executable of the application in the 'Open' dialog.
- Click 'Open'. A rule will be created to allow Internet access to the selected application.

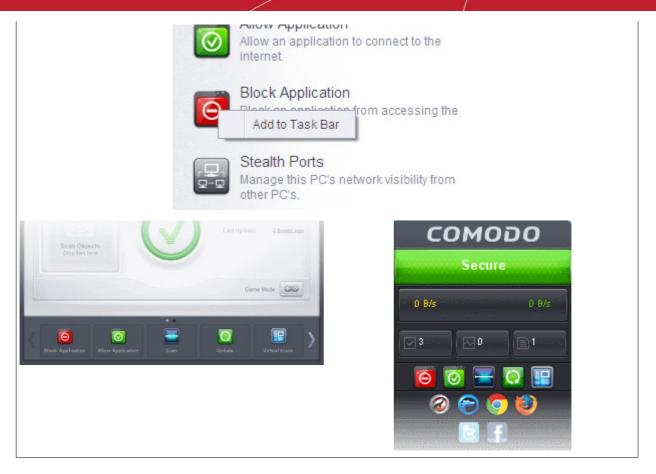

To block an application's Internet access rights

- Click the 'Block Application' button from the 'Firewall Tasks' interface.
- Browse to the main executable of the application in the 'Open' dialog.
- Click 'Open'. A rule will be created to prohibit Internet access to the selected application.

The advanced application rules interface can be accessed by clicking 'Tasks' from the CIS home screen > Firewall Tasks > Open Advanced Settings > Application rules. The application you just allowed or blocked should be listed here. For further information on application rules governing Internet access rights, see **Application Rules**.

Tip: if you plan to regularly allow/block applications, you can right click on the appropriate button and select 'Add to Taskbar'. It will then be quickly accessible from both the CIS home screen and the widget:

COMODO Creating Trust Online

3.2. Stealth your Computer Ports

Port Stealthing is a security feature whereby ports on an Internet connected PC are hidden from sight, evoking no response to opportunistic port scans.

General Note: Your computer sends and receives data to other computers and to the Internet through an interface called a 'port'. There are over 65,000 numbered ports on every computer - with certain ports being traditionally reserved for certain services. For example, your machine almost definitely connects to Internet using port 80 and port 443. Your e-mail application connects to your mail server through port 25. A 'port scanning' attack consists of sending a message to each of your computer ports, one at a time. This information gathering technique is used by hackers to find out which ports are open and which ports are being used by services on your machine. With this knowledge, a hacker can determine which attacks are likely to work if used against your machine.

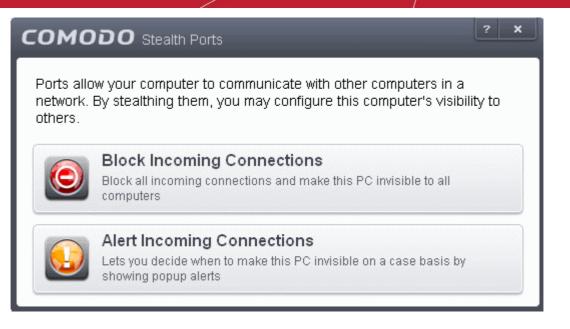

Stealthing a port effectively makes it invisible to a port scan. This differs from simply 'closing' a port as NO response is given to any connection attempts ('closed' ports respond with a 'closed' reply- revealing to the hacker that there is actually a PC in existence.) This provides an extremely high level of security to your PC. If a hacker or automated scanner cannot 'see' your computers ports then they presumes it is offline and move on to other targets. You can still be able to connect to Internet and transfer information as usual but remain invisible to outside threats.

Comodo Firewall provides a user with flexible stealthing options.

Click on 'Stealth Ports' link in Firewall Tasks:

You have two options to choose from:

Block incoming connections

Selecting this option means your computer's ports are invisible to all networks, irrespective of whether you trust them or not. The average home user (using a single computer that is not part of a home LAN) finds this option the more convenient and secure. You are not alerted when the incoming connection is blocked, but the rule adds an entry in the firewall event log file. Specifically, this option adds the following rule in the 'Global Rules' interface:

Block And Log| IP | In| From Any IP Address| To Any IP Address | Where Protocol is Any

If you would like more information on the meaning and construction of rules, please click here.

Alert incoming connections

You see a **firewall alert** every time there is a request for an incoming connection. The alert asks your permission on whether or not you wish the connection to proceed. This can be useful for applications such as Peer to Peer networking and Remote desktop applications that require port visibility in order to connect to your machine.

Specifically, this option adds the following rule in the 'Global Rules' interface:

Block |ICMP | In | From Any IP Address | To Any IP Address | Where Message is ECHO REQUEST

If you would like more information on the meaning and construction of rules, please click here.

3.3. Manage Network Connections

The 'Manage Network Connections' interface allows you to quickly view all wired and wireless networks to which your computer is connected. The lower half of the panel displays details about each network including its name, IP address and gateway.

- You can choose to trust or block a network by selecting the appropriate radio button under the network in question.
 You will not be able to receive any inbound or outbound traffic from blocked networks.
- Use the handles (< >) to scroll through all available networks or computers
- Use the refresh button if you have recently made network changes and these are not yet visible in the interface.

COM	10D0 Manage Networks		? X
	SMITHS-CON	MPUTER (This Computer)	
<	IP In Gateway:	Local Area Connection 1 IP In Gateway:],
	Trust Network O Block Network	Trust Network O Block Network	
Re	efresh	Ok C	ancel

- The 'Manage 'Networks' interface can be opened by clicking 'Tasks > Firewall Tasks > Manage Networks'.
- To view, create or block Network Zones, click 'Tasks > Firewall Tasks > Open Advanced Settings > Network Zones'.

3.4. Stop all Network Activities

As the name suggests, the 'Stop all network activity' button instructs the firewall to immediately cut-off all inbound/outbound communication between your computer and all available networks (including the Internet). Connections will remained closed until you re-enable them by clicking the button a second time. This allows you to quickly take your computer offline without having to delve into Windows network settings and without having to to unplug any network cables.

Stop All Activity Block all network activity to and from this PC

- Access the network activity 'on/off' button by clicking Tasks > Firewall Tasks
- · Disconnect your computer from all networks by clicking 'Stop All Activity' (button will be red)
- Re-enable connectivity by clicking 'Restore All Activity' (button will be green)
- Restoring activity just re-enables your existing firewall rules. Therefore, any networks that you have previously blocked in 'Manage Network Connections' or 'Network Zones' will remain blocked.
- You can assign networks into network zones in the 'Network Zones' area
- You can configure rules per network zone in the 'Global Rules' area
- You can view all network connections and enable/disable connectivity on a per-network basis in the 'Manage Network Connections' area

3.5. Advanced Firewall Settings

The 'Advanced Settings' area is the nerve center of Comodo Firewall and allows advanced users to configure and deploy traffic

filtering rules and policies on an application specific and global basis. To open the interface, click 'Tasks' on the home screen followed by 'Open Advanced Settings' then 'Firewall Settings':

COMODO Advanced	d Settings
General Settings	Firewall Settings
Security Settings	
► Antivirus	Enable Firewall (Recommended) Block All
► Defense+	This option enables firewall which filters inbound and outbound traffic.
▼ Firewall	Alert Settings
👌 Firewall Settings <	☑ Do NOT show popup alerts Allow Requests ▼
P Application Rules	Enable automatic detection of private networks Enable Trustconnect alerts Unsecured Wireless Networks Only
Global Rules	Turn traffic animation effects on
	Create rules for safe applications
Network Zones	Alert frequency level
Portsets	Set new on-screen alert timeout to 220 secs
 ▶ File Rating 	Advanced
	Filter IPv6 traffic
	Filter loopback traffic(e.g. 127.x.x.x, ::1)
	Block fragmented IP traffic
	Do Protocol Analysis
	Enable anti-ARP spoofing
	OK Cancel

The interface is divided into six main sections - **Firewall Settings**, **Application Rules**, **Global Rules**, **Rulesets**, **Network Zones** and **Portsets**. Click the links below to jump to more details on each section:

- The Firewall Settings area allows you to configure the security of your computer and the frequency of alerts that are generated.
- The Application Rules area allows users to view, manage and define the network and Internet access rights of
 applications on your system.
- The Global Rules area allows users view, manage and define overall Firewall ruleset that applies to your computer and is independent of application rules.
 - Both application rules and global rules are consulted when the firewall is determining whether or not to allow
 or block a connection attempt.
 - For Outgoing connection attempts, the application rules are consulted first and then the global rules.
 - For Incoming connection attempts, the global rules are consulted first and then application specific rules.
- The **Rulesets** area contains a list of preset Firewall rules that can be re-used and applied to multiple applications. For example, there is a 'Browser' rule, an 'Email Client' rule and rules for 'Trusted' and 'Blocked' applications.
- The Network Zones area allows you to group IP addresses and ranges into named zones. Once defined, privileges
 and rules can be applied to these zones in other areas of CIS. For example, global and application rules can be
 applied to network zones. This interface also allows you to block network zones.
- The Portsets area contains groups of important / regularly used port numbers that can be easily selected as part of a
 global or application rule.

4. Sandbox Tasks - Introduction

Comodo Internet Security features a fully functional sandbox called the 'Virtual Kiosk'- an isolated operating environment for running unknown, untrusted and suspicious applications. Applications executed inside the sandbox/virtual kiosk will not affect other processes, programs or data on your real computer. In addition to running suspicious applications inside the sandbox on an ad-hoc basis, you can create a specific list of programs that should always run in the sandbox.

Q Search i	Tasks	Home 🚄
General Ta	asks	~
Firewall Ta	nsks	~
Sandbox T	asks	
	Run Virtual Kiosk	Cpen Shared Space
	Create a secure virtual desktop and start using it.	Open the storage space shared between virtual and real applications.
	Run Virtual	Copen Advanced Settings
Ľ	Run applications in Sandbox and create shortcuts for them on the desktop.	Access and configure various Sandbox configuration options.
	Reset Sandbox	
	Clean Sandbox data by erasing all the content.	

Note: The sandbox referred to here is a full environment and is distinct to the 'auto-sandbox' configured under **behavior blocker**. Users can, however, enable 'Full Virtualization' of auto-sandboxed files in the **Behavior Blocker** settings.

The Sandbox Tasks interface has shortcuts for the following tasks:

- Run Virtual Kiosk Starts the Virtual Kiosk
- **Open Shared Space** Opens the folder 'Shared Space' which is shared by your host operating system and the Virtual Kiosk. The folder is created by the Virtual Kiosk at the location 'C:\Documents and Settings\All Users\Application Data\Shared Space'. The folder can be opened in both your host operating system and inside the Virtual Kiosk, and enables to share files and applications between the OS and the Kiosk.
- Run Virtual Allows you to run individual applications in the sandbox
- Reset Sandbox Allows you to clear all data written by programs run inside the sandbox
- Open Advanced Settings Add programs that should always run inside the sandbox and access advanced sandbox settings. This is covered in the 'Configure the Sandbox' section of 'Advanced Settings'

4.1. The Virtual Kiosk

The Virtual Kiosk is a sandboxed operating environment inside of which you can run programs and browse the Internet without fear that those activities will damage your real computer. Applications running in the kiosk also leave no cookies or history behind on your real system, making it a secure environment for Internet banking and online shopping. It is also ideal for visiting any risky websites/links and for testing out beta/unstable software.

Virtual Kiosk at a glance:

- The kiosk can run any program that you can run in regular Windows and is particularly useful for browsing the Internet in a secure manner.
- Any changes made to files and settings in the kiosk will not affect the original versions on your host system. Changes will only be visible in the Kiosk itself.
- Similarly, any changes made by malicious programs or unstable beta software will not damage your real computer.
- Any files you wish to keep and access from your host operating system can be saved to 'Shared Space'.
- The Virtual Kiosk can be password-protected for added privacy.
- The virtual keyboard allows you to securely enter confidential passwords without fear of key-logging software.
- The kiosk UI can be used in both 'Classic' (Windows style) and 'Tablet' modes by selecting the mode from Settings.
- You can reset the kiosk and clear shared space at any time. We recommend that you do this regularly to maximize your privacy and security. Please note that all settings, stored data and any applications installed sandboxed will be deleted.

Click the following links to find out more details on:

- Starting the Virtual Kiosk
- The Main Interface
- Run Browsers inside Virtual Kiosk
- Open Files and Run Applications inside Virtual Kiosk
- Configuring the Virtual Kiosk
- Closing the Virtual Kiosk

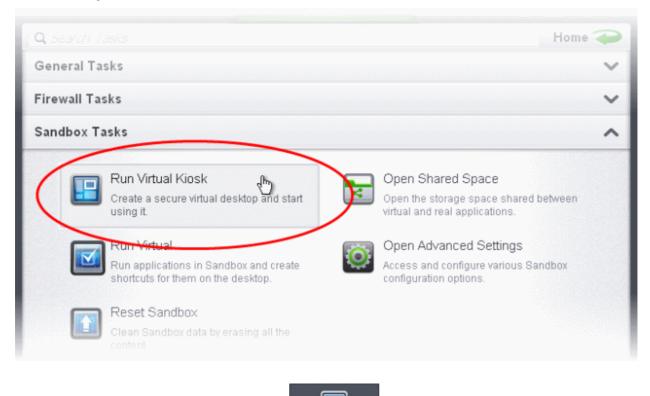

4.1.1. Starting the Virtual Kiosk

The Virtual Kiosk can be started by:

•

Clicking Tasks > Sandbox Tasks > Run Virtual Kiosk

Or by clicking the Virtual Kiosk shortcut button
 from the Home Interface

The following software is needed to utilize the Virtual Kiosk to its full potential:

- Comodo Dragon Browser
- Microsoft Silverlight

Whenever you run the kiosk, Comodo Internet Security checks whether these components are installed. If they aren't, you will be prompted to install them.

сом	IODO Virtual Kiosk
?	COMODO Dragon and/or Microsoft Silverlight are not detected in this computer. They need to be installed in order to provide you the full power of Virtual Kiosk. Would you like to install them now?
🔲 Dor	n't show this message again
	Yes No Cancel

- If you want Comodo Dragon and/or Microsoft Silverlight to be installed this time, click 'Yes'. If not, click 'Cancel'. You will be prompted to install them, next time when you start the Kiosk.
- If you do not want the applications to be installed at all, click 'No'.
- On clicking 'Yes', CIS will download and install the software

4.1.2. The Main Interface

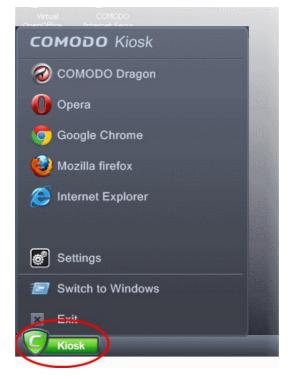

The Virtual Kiosk is presented with two switchable interfaces:

- Classic Windows style Desktop mode
- Tablet mode

You can switch between these two modes by clicking the green 'Kiosk' button then 'Settings' (Kiosk > Settings > 'Mode' tab.) refer to the table below for a comparison of different modes of the Kiosk main interface.

In 'Classic' mode,

- All desktop items of your real system are displayed. Clicking the shortcuts on the kiosk desktop will run the program or file inside the kiosk
- · Clicking the 'Kiosk' button at the bottom left will open a Windows style Start Menu style Kiosk menu

The Kiosk menu allows you to:

- Run browsers that are installed on your system. Refer to Running Browsers inside the Virtual Kiosk for more details
- Configure the Virtual Kiosk by clicking 'Settings'. Refer to Configuring the Virtual Kiosk for more details.
- Clicking the keyboard icon on the system tray opens a virtual keyboard that can be used to input confidential data like website user-names, passwords and credit card numbers.

- To display the numeric keypad on the right, click the >> button at the top of the keyboard.
- Clicking the 'Volume Control' icon at the system tray enables you to control the system volume.
- Right-clicking on the task bar and selecting 'Watch Activity' opens the 'Windows Task Manager' to view your computer's performance, close unresponsive programs and to troubleshoot problems with Windows.

Tablet Mode

To switch to 'Tablet' mode from 'Classic' mode, click the green 'Kiosk' button at bottom left followed by Settings > Mode and select 'Tablet Mode'.

There are two variations of this mode:

- Mode A Pure Tablet device A touch-screen interface that will be familiar to users of modern smart devices. The home page displays a set of popular apps covering games, social media and networking. You can, of course, install your own apps from the app market.
 - To install your own apps, click the App Market icon from the launch bar. You will be taken to
 https://chrome.google.com/webstore/category/home?utm_source=COMODO-Kiosk. Select the apps
 you want to install from the webstore.
- Mode B Tablet device + Classic Windows The home page displays the desktop items from your real system. The task bar from classic mode is present along with the green 'Kiosk' button and the virtual keyboard. The launch strip will display all installed browsers.

You can swap between the two variations by tapping the arrow *we at the top right.* You can swipe the home screen in both left and right directions to navigate between successive home pages.

The following table gives a comparison of the classic and tablet modes of the main interface:

Classic Mode	Mode A - Pure Tablet	Mode B - Tablet + Classic
Windows desktop style interface.	Tablet style interface.	Tablet style interface.
Your real desktop shortcuts and files are displayed	Shortcut icons of the apps installed on the tablet are displayed	Your real desktop shortcuts and files are displayed
Shortcuts and files are laid out vertically as they would be on a Windows desktop	Shortcuts are laid out horizontally	Shortcuts and files are laid out horizontally
No Launch Bar	Browser shortcuts are displayed on the launch bar at the bottom	Browser shortcuts are displayed on the launch bar at the bottom
Cannot have multiple home screens	Can have multiple home screens	Can have multiple home screens if you have many shortcuts and files
Cannot swipe the screen to move between home screens	Can swipe the screen to move between home screens	Can swipe the screen to move between home screens

4.1.3. Running Browsers inside the Virtual Kiosk

The Virtual Kiosk provides an extremely secure environment for Internet related activities because it isolates your browser from the rest of your computer. Just by visiting them, malicious websites can install viruses malware, rootkits and spyware onto your computer that can allow hackers to steal confidential information. Surfing the 'net inside the Kiosk removes this threat to your machine by preventing any website from installing anything on your real computer. Furthermore, the Virtual Keyboard allows you to securely enter user-names, credit card numbers and passwords without fear of key-logging software recording your physical keystrokes.

To run a browser inside the Virtual Kiosk

- 1. Click the 'Kiosk' menu at the bottom left
- 2. Select the browser you want to run from the browsers displayed.

The browser will be opened inside the Kiosk.

On completion of your browsing session, no trails like your browsing history will be stored in your computer.

4.1.4. Opening Files and Running Applications inside the Virtual Kiosk

Applications installed or the files stored in your system can be opened inside the Virtual Kiosk by the following methods:

- Opening the applications/files from the desktop shortcuts
- Sharing the application/files through the Shared Space folder

Desktop Shortcuts

You can copy the files or create shortcuts for the applications/files to be opened in Virtual Kiosk, in the desktop of your real system. The shortcuts of your real desktop will be available in the Virtual Kiosk desktop. You can double click on the icon to open the respective application of file inside the Virtual Kiosk.

Note: The real computer desktop icons will be available only in the Classic Windows Mode and Tablet + Classic Mode.

Shared Space

The Virtual Kiosk creates a folder Shared Space in the location "C:\Documents and Settings\All Users\Application Data\Shared Space", which can be shared by your host operating system and the Virtual Kiosk.

The Shared Space can be accessed in the following ways:

- Click 'Open Shared Space' under 'Sandbox' Tasks in the Tasks Interface
- Click the 'Shared Space' shortcut icon from the home screen of CIS
- Click the 'Shared Space' shortcut icon from the CIS widget
- Click the 'Shared Space' desktop shortcut icon

To open an application or file from your host system in the Virtual Kiosk

- 1. Open the 'Shared Space' as mentioned above
- 2. Copy/Move the application or the file to be opened into the Shared Space
- 3. Start 'Virtual Kiosk'
- 4. Open Shared Space inside the Virtual Kiosk by clicking the 'Shared Space' icon in the home screen.

Note: The Shared space home screen icon will be available only in the Classic Windows Mode and Tablet + Classic Mode.

5. Double click on the application/file in the shared space to open it inside the Kiosk.

The changes you make to the file will be stored to the file only inside the Virtual Kiosk and not in the real computer system.

4.1.5. Configuring the Virtual Kiosk

The Settings panel in the Virtual Kiosk allows you to configure the operation mode and look and feel of the Kiosk. To configure the Virtual Kiosk

- 1. Click the 'Kiosk' start menu at the bottom left
- 2. Select 'Settings' from the Kiosk start menu

The Settings panel will open.

COMODO Creating Trust Online

Settings	×
Mode Themes	
O Classic Mode	
Tablet Mode	
OK Car	ncel

The Settings panel has two tabs:

- Mode Allows you to select the display mode of the Virtual Kiosk between Classic Windows mode and Tablet Mode (Default)
- Themes Allows you to choose the appearance of the Kiosk
- 3. Click OK for your settings to take effect

4.1.6. Closing the Virtual Kiosk

To close the Virtual Kiosk and return to your real computer system

- 1. Click the 'Kiosk' start menu at the bottom left
 - To temporarily switch to your real Windows system, Select 'Switch to Windows'. The Virtual Kiosk will be temporarily closed and you can quickly return to it by clicking 'Open Virtual Kiosk' from the 'Sandbox Tasks' interface.
 - To close the Virtual Kiosk, select 'Exit'. The Virtual Kiosk will be shut down and you will be able to continue with your real system.
- In either case, if password protection is enabled under Advanced Settings > Security Settings > Defense+ > Sandbox Settings, you will be prompted to enter the password. Else the Virtual Kiosk will be closed.

	×
Input a password in the dialog to Comodo Kiosk	exit
•••••	
ОК	

3. Enter the password and click OK.

Note: Remember to save the changes before you exit the Virtual Kiosk. Your changes will be lost if you exit the Kiosk without saving them.

4.2. Run an Application in the Sandbox

Comodo Internet Security allows you to run programs inside the Sandbox on a 'one-off' basis. This is helpful to test the behavior of new executables that you have downloaded or for applications that you are not sure that you trust. Adding a program in this way means that it will run in the Sandbox this time only. On subsequent executions it will not run in the sandbox (presuming it passes **the sandboxing process**).

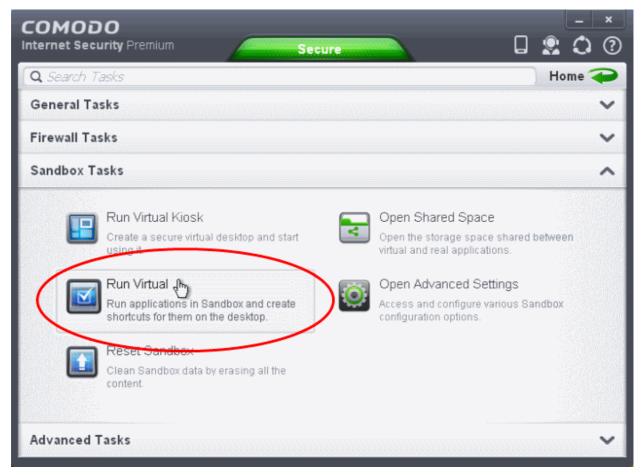

You can also create a desktop shortcut to run the application inside the sandbox on future occasions. The following image shows hows a 'virtual' shortcut will appear on your desktop:

Note: If you wish to run an application in the sandbox on a long-term/permanent basis then add the file to the Sandbox.

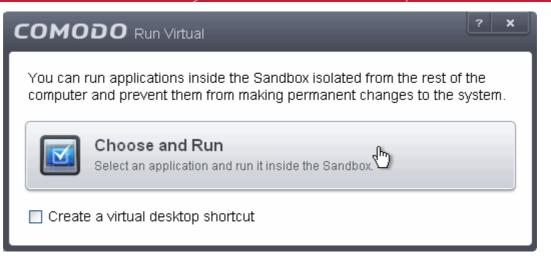

To run an application in the Sandbox

1. Open the Sandbox Tasks interface and Click 'Run Virtual'.

The 'Run Virtual' dialog will be displayed.

2. To run an application inside the sandbox, click 'Choose and Run' then browse to the application. The application will run with a green border indicating that it is sandboxed. If you wish to run the application in the sandbox in future, then select 'Create a virtual desktop shortcut'.

Open								? 🗙
Look jn:	🚞 program		*	G	ø	Þ	•	
My Recent Documents Desktop My Documents	components defaults greprefs resource python quickstart rebasegui rebasegui soffice sweb swriter unoinfo	unopkg						
My Computer	File <u>n</u> ame:	swriter				*		<u>O</u> pen
My Network	Files of <u>type</u> :	Applications (*.exe) Open as read-only				*		Cancel

3. Browse to the application and click 'Open'. In the example above, Open Office Writer is chosen.

Alternatively, you can run an application inside the sandbox by the following shortcut methods:

- By dragging-and-dropping the application on to CIS Home screen
- From the context sensitive menu
- Running browsers inside sandbox

Drag-and-drop the application on to CIS Home Screen

In the Compact View of the Home screen, the flippable pane at the left side allows you to run instant scans or run a program in sandbox. To flip the pane to carry out these tasks, just click the curved arrow at the top right side of the pane.

To run a program in a sandbox, first flip the pane by clicking the curved arrow at the top right side to display 'Sandbox Objects'.

Now, navigate to the program in your system that you want to run in sandboxed environment and just drag and drop into the box.

Running a program from the context sensitive menu

· Navigate to the program in your system that you want to run in sandboxed environment and right click on it

The application will run in the Sandbox on this occasion only. If you often want the browser to run sandboxed then create a 'virtual shortcut' for the application by selecting the check-box 'Create a virtual desktop shortcut' in step 2. If you wish to run an application in the sandbox on a long-term/permanent basis then add the file to the Sandbox.

4.3. Reset the Sandbox

Programs running inside the Virtual Kiosk store the changes to the files accessed by them inside the sandbox so that the changes do not affect the real computer system. Items stored in the sandbox/Virtual Kiosk could, depending on your usage patterns, contain malware downloaded from websites or private data in your browsing history. Periodically resetting the sandbox will clear all this data and help protect your privacy and security. If data has accumulated over a long period of time, then resetting the sandbox will also help the Kiosk operate more smoothly.

The Reset Sandbox option under the Sandbox Tasks allows you to delete all the items stored in the sandbox.

To clear the sandbox

· Click on the 'Sandbox Tasks' bar from the Tasks interface and then click 'Reset Sandbox'

5. Advanced Tasks - Introduction

The 'Advanced Tasks' area allows you modify the overall configuration of CIS and to take advantage of several other Comodo utilities. Click the following links to find out more about each item:

- · Create Rescue Disk Burn a bootable ISO that lets you run virus scans in pre-boot environments
- · Submit Files Directly Submit unknown/suspicious files to Comodo for analysis
- · Watch Activity Use Comodo Killswitch to identify unsafe processes and manage system activity
- Clean Endpoint Deploy Comodo Cleaning Essentials to eradicate persistent infections from your PC
- · Open Advanced Settings Configure overall behavior, define custom rulesets and much more

Some of these utilities require the download and installation of additional setup files. After installation, the utility will start directly next time you click the button.

COMODO Creating Trust Online

5.1. Create a Rescue Disk

Comodo Rescue Disk (CRD) is a bootable disk image that allows users to run virus scans in a pre-boot environment (before Windows loads). CRD runs Comodo Cleaning Essentials on a lightweight distribution of the Linux operating system. It is a powerful virus, spyware, rootkit scanner and cleaner which works in both GUI and text mode. The tool can provide a more comprehensive and thorough scan than regular malware cleaning applications because it cleans your system before Windows is loaded. CRD is intended to be used when malware embeds itself so deeply into your system that regular AV software cannot remove it. The rescue disk is also very effective at removing infections that are preventing Windows from booting in the first place. Apart from the virus scanner, CRD also provides tools to explore files in your hard drive, take screen-shots and browse web pages.

• Clicking the 'Create Rescue Disk' button in CIS 'Advanced Settings' opens a utility that allows you to download and burn the CRD iso to a CD/DVD, USB or other drive. Click here to jump to a walk-through of this process

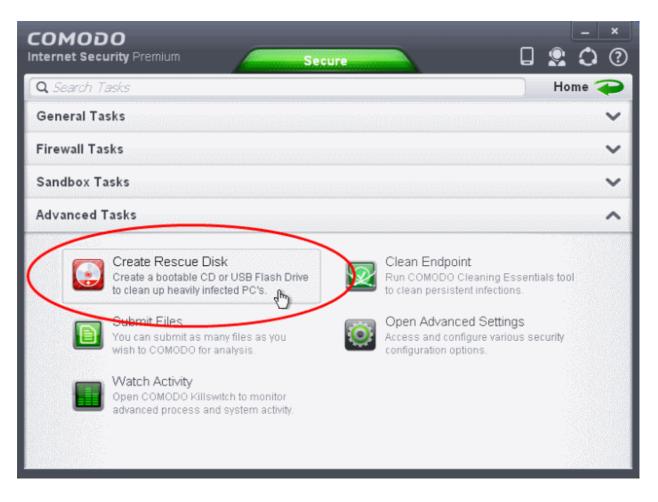

сом	ODO Rescue Disk
٢	Bootable CD/DVD or USB Rescue Disk The rescue disk ISO image is required to create a bootable disk.
1	Select ISO File (Optional) If you have already downloaded the ISO file, click here to choose it. Otherwise it will be downloaded from the Internet.
2	Select Target Drive Select where the rescue disk should be created e.g. a USB drive or a writable CD/DVD drive.
3	Start If you have selected the target drive, start burning process now.

After you have burned the ISO, you need to boot your system to the rescue disk in order to use the scanner in your pre-boot environment.

- Details of how to change boot order on your computer can be found in the Rescue Disk user guide at http://help.comodo.com/topic-170-1-493-5227-Changing-Boot-Order.html
- Details of how to initiate CRD after booting can be found at http://help.comodo.com/topic-170-1-493-5228-Bootingto-and-Starting-Comodo-Rescue-Disk.html
- Details of how to start running scans on your pre-boot environment are available at http://help.comodo.com/topic-170-1-493-5216-Starting-Comodo-Cleaning-Essentials.html and http://help.comodo.com/topic-170-1-493-5217-CCE-Interface.html

5.1.1. Downloading and Burning Comodo Rescue Disk

To create a Comodo Rescue Disk, Click 'Create Rescue Disk' button from the Advanced Tasks interface.

The Comodo Rescue Disk interface will open.

сом	ODO Rescue Disk
٢	Bootable CD/DVD or USB Rescue Disk The rescue disk ISO image is required to create a bootable disk.
1	Select ISO File (Optional) If you have already downloaded the ISO file, click here to choose it. Otherwise it will be downloaded from the Internet.
2	Select Target Drive Select where the rescue disk should be created e.g. a USB drive or a writable CD/DVD drive.
3	Start If you have selected the target drive, start burning process now.

The Comodo Rescue Disk interface displays the steps involved in creation of a new Rescue Disk on a CD/DVD or in a USB drive.

Step 1- Select the ISO file

This step allows you to select the Comodo Rescue Disk image file in .iso format stored in your hard drive, if you have already downloaded the same from Comodo servers or copied from another computer. Pre-storing the .iso file and burning the rescue disk from it conserves your Internet connection bandwidth usage. This step is optional. If you haven't downloaded the iso file, it will be automatically downloaded from Comodo Servers prior to execution of Step 3 - Burning the Rescue Disk.

Click Select ISO File (Optional) and navigate to the comodo_rescue_disk.iso file

Step 2 Select target drive

This step allows you to select the CD/DVD drive or the USB drive to burn the Rescue Disk.

To burn the Rescue disk on a CD or a DVD

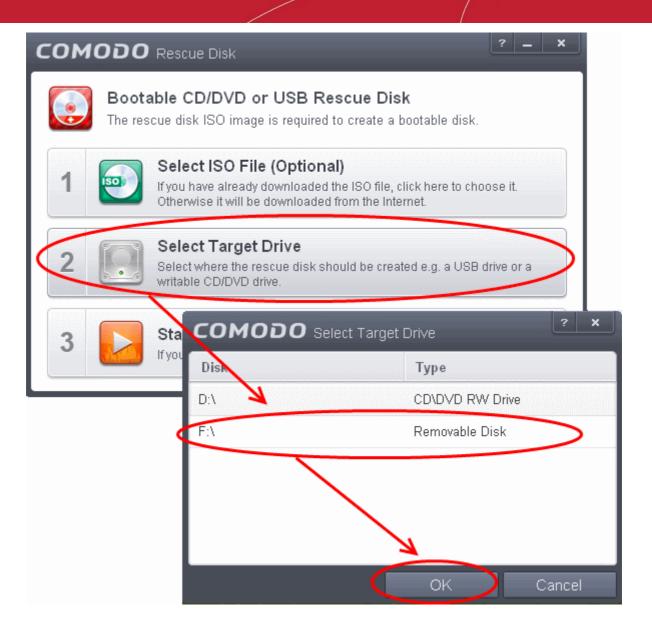

- · Label a blank CD or DVD as "Comodo Rescue Disk Bootable" and load it to the CD/DVD drive in your system
- Click 'Select Target Drive' from the 'Comodo Rescue Disk' interface and select the drive from the Select Disk dialog

To burn the Rescue disk on a USB Drive

- Insert a formatted USB memory to a free USB port on your computer
- Click 'Select Target Drive' from the 'Comodo Rescue Disk' interface and select the drive from the Select Disk dialog

COMODO Creating Trust Online*

Step 3 - Burn the Rescue Disk

• After you selected the target drive, click 'Start'. If you have selected an .iso file from your hard disk, the burning of the disk will start immediately. Else, the .iso file will be downloaded from Comodo Servers.

On completion, the files will be written on to the CD/DVD or the USB Drive.

Wait till the completion of the process. Do not eject the CD/DVD or the USB drive. On completion of the process, the CD/DVD will be ejected automatically.

Your Bootable Comodo Rescue Disk is created. Click 'Continue' to go back to CIS interface.

5.2. Remove Deeply Hidden Malware

Comodo Cleaning Essentials (CCE) is a set of computer security tools designed to help users identify and remove malware and unsafe processes from infected computers.

Major features include:

.

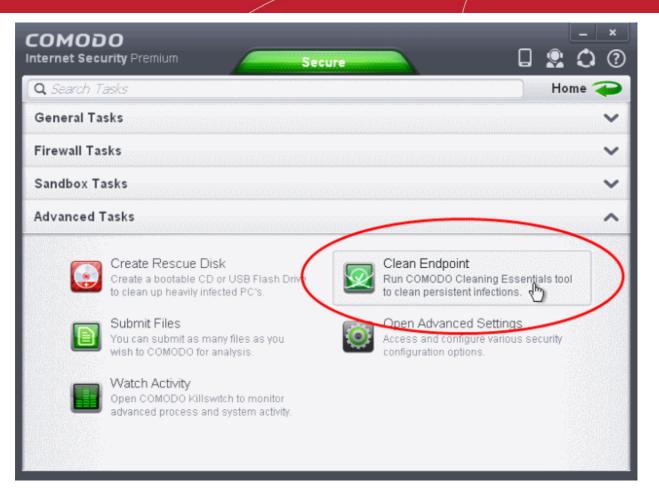

- **KillSwitch** an advanced system monitoring tool that allows users to identify, monitor and stop any unsafe processes that are running on their system.
- Malware scanner Fully customizable scanner capable of unearthing and removing viruses, rootkits, hidden files and
 malicious registry keys hidden deep in your system.
- Autorun Analyzer An advanced utility to view and handle services and programs that were loaded when your system booted-up.

CCE enables home users to quickly and easily run scans and operate the software with the minimum of fuss. More experienced users will enjoy the high levels of visibility and control over system processes and the ability to configure customized scans from the granular options menu.

For more details on the features and usage of the application, please refer to the online guide at http://help.comodo.com/topic-119-1-328-3516-Introduction-to-Comodo-Cleaning-Essentials.html.

Comodo Cleaning Essentials can be directly accessed from the CIS interface by clicking the 'Clean Endpoint' button in the 'Advanced Tasks' interface.

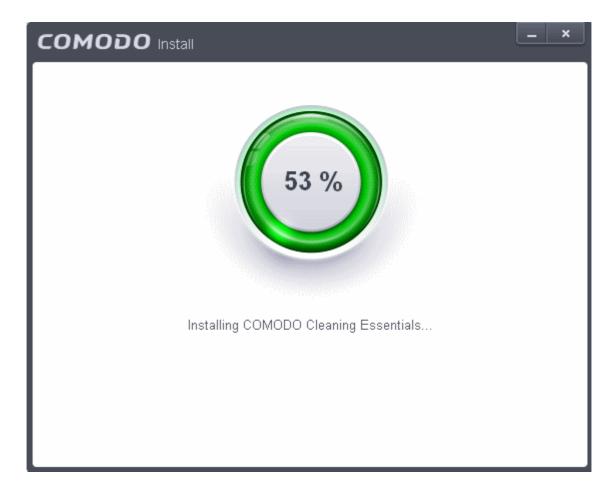

COMODO Creating Trust Online*

• Clicking the 'Clean Endpoint' for the first time, CIS will download and install Comodo Cleaning Essentials. Once installed, clicking this button in future will open the CCE interface.

		_ ×		
Install Required Packages The feature requires installation of additional packages.				
The following must be downloaded and in	istalled:			
Package Name	License Agreement	Size		
COMODO Cleaning Essentials	View License Agreement	5.72 MB		
By pressing "Agree and Install", you agree with user license agreements for all the				
packages listed above.				
	A	gree and Install		

Read the license agreement by clicking 'View License Agreement' and click 'Agree and Install'. CIS will download and
install the application.

On completion of installation, the Comodo Cleaning Essentials main interface will be opened.

- Details of how to use KillSwitch to monitor and terminate unsafe process from the main interface can be found at http://help.comodo.com/topic-119-1-328-3525-The-Main-Interface.html
- On clicking the 'Clean Endpoint' button from next time onwards, Comodo Cleaning Essentials will be opened.

5.3. Submit Files

As the name suggests, the 'Submit Files' interface allows you to send as many files as you wish to Comodo for analysis. Files which CIS classifies as 'Unknown' or 'Unrecognized' are not in the Comodo safe list but have also not been identified as known malware. By sending these files to Comodo, you allow our team to analyze them and classify them as either 'Safe' or 'Malicious'. You can also submit files you suspect of being 'false positives' (those files that you feel CIS has incorrectly identified as malware). Subsequent to classification, they will be added to the white or black list accordingly.

Note: Unrecognized files can also be submitted from the 'Unrecognized Files' interface should you prefer.

To open the 'Submit Files' interface, click 'Tasks' on the home screen followed by 'Advanced Tasks' > 'Submit Files'

Open Advanced Settings Access and configure various security configuration options.

The 'Submit' interface will open.

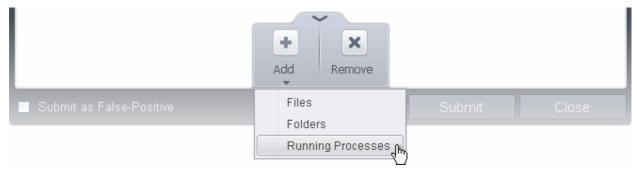

COMODO Submit	?		×
Location			
C:\scripts\phy_memory_spy.vbs			
+ × Add Remove			
Submit as False-Positive Submit	С	lose	

Clicking the handle at the bottom center of the panel opens the following options:

- Add Allows you to add files to the 'Submit Files' list
- Remove Allows you to remove files from the 'Submit Files' list

To add new file(s) to 'Submit Files' list

• Click the handle from the bottom center and choose 'Add'

You can add files to the Submit Files list by three ways:

- Files Allows you to navigate to the file or executable of the program you wish to add.
- Folders Allows you to navigate to the folder you wish to add. All the files in the folder will be added to the 'Trusted Files' list.
- Running Processes Allows you to select a currently running process. On selecting a process, the parent
 application, which invoked the process will be added to 'Trusted Files' list.
- Repeat the process to add more files and to submit them at-once.

To remove the files from 'Submit Files' list

- Select the file from the list
- Click the handle from the bottom center and select Remove

After adding the files you want to submit, click 'Submit' button. If you want to submit the files as False Positives to Comodo, select the 'Submit as False-Positive check' box.

The files will be submitted and the progress will be displayed

COMODO Creating Trust Online*

	? <u> </u>
C:\scripts\phy_memory_spy1.vbs	
File Name	State
C:\scripts\Install_Software.vbs	🔽 Uploaded
C:\scripts\memory_spy.vbs	🔽 Already submited
C:\scripts\phy_memory_spy1.vbs	C Lookup
Stop II Pause	Send to Background

You can stop, pause/resume or send the submission process to background by clicking respective buttons.

When a file is first submitted, Comodo's online file look-up service will check whether the file is already queued for analysis by our technicians. The results screen displays these results on completion:

COMODO Submit Files	? <u> </u>
C:\scripts\phy_memory_spy1.vbs	
File Name	State
C:\scripts\Install_Software.vbs	Vploaded
C:\scripts\memory_spy.vbs	🔽 Already submited
C:\scripts\phy_memory_spy1.vbs	Vploaded
* Close	Send to Background

- 'Uploaded' The file's signature was not found in the list of files that are waiting to be tested and was therefore uploaded from your machine to our research labs.
- 'Already submitted' The file has *already* been submitted to our labs by another CIS user and was not uploaded from your machine at this time.

Comodo will analyze all submitted files. If they are found to be trustworthy, they will be added to the Comodo safe list (i.e. white-

listed). Conversely, if they are found to be malicious then they will be added to the database of virus signatures (i.e. black-listed).

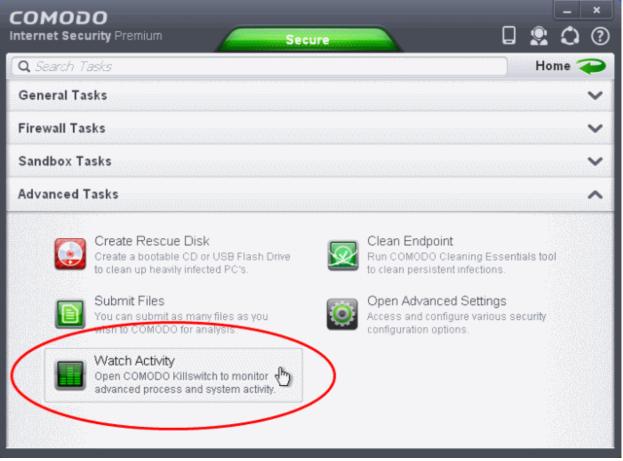

The list of files submitted from your computer can be viewed from the Submitted Files interface.

5.4. Identify and Kill Unsafe Running Processes

Comodo KillSwitch is an advanced system monitoring tool that allows users to quickly identify, monitor and terminate any unsafe processes that are running on their system. Apart from offering unparalleled insight and control over computer processes, KillSwitch provides you with yet another powerful layer of protection for Windows computers.

KillSwitch can show ALL running processes - exposing even those that were invisible or very deeply hidden. It allows you to identify which of those running processes are unsafe and to shut them all down with a single click. You can also use Killswitch to trace back to the malware that generated the process.

Comodo KillSwitch can be directly accessed from the CIS interface by clicking the 'Watch Activity' button in the 'Advanced Tasks' interface.

Clicking the 'Watch Activity' for the first time, CIS will download and install Comodo Killswitch. Once installed, clicking this button in future will open the Killswitch interface.

COMODO Install Package Install Required Packages The feature requires installation of additional packages. The following must be downloaded and installed: Package Name License Agreement Size COMODO Killswitch View License Agreement 5.72 MB By pressing "Agree and Install", you agree with user license agreements for all the packages listed above. Agree and Install"

Read the license agreement by clicking 'View License Agreement' and click 'Agree and Install'. CIS will download and install the application.

COMODO Creating Trust Online

On completion of installation, the Comodo KillSwitch main interface will be opened.

On clicking the 'Watch Activity' button from next time onwards, Comodo Killswitch will be opened.

 Details of how to use KillSwitch to monitor and terminate unsafe process from the main interface can be found at http://help.comodo.com/topic-119-1-328-3529-The-Main-Interface.html

6.Advanced Settings

The 'Advanced Settings' area allows you to configure every aspect of the operation, behavior and appearance of Comodo Internet Security. The 'General Settings' section lets you specify top-level preferences regarding the interface, updates and event logging. The 'Security Settings' section lets advanced users delve into granular configuration of the Antivirus, Firewall, Defense+ and File Ratings modules. For example, the 'Security Settings' area allows you to create custom virus scan schedules, create virus exclusions, create Firewall and HIPS rules, modify sandbox behavior, define network zones and specify how the file rating system deals with trusted and untrusted files.

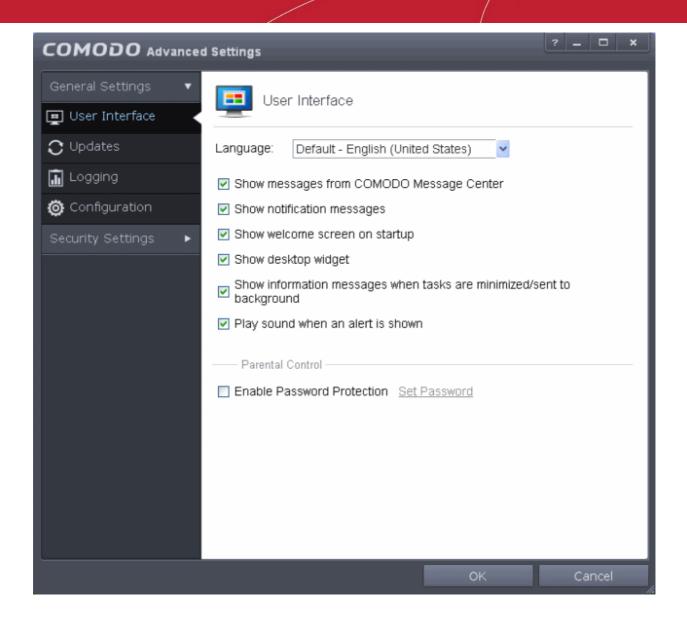

To open 'Advanced Settings':

- · Click the 'Tasks' arrow if you are on the CIS home screen
- Click 'Advanced Tasks' then 'Open Advanced settings'

	Show information messages when tasks are minimized/se background	ent to			
	Play sound when an alert is shown				
	Parental Control				_
	Enable Password Protection Set Password				
	ОК		Car	ncel	

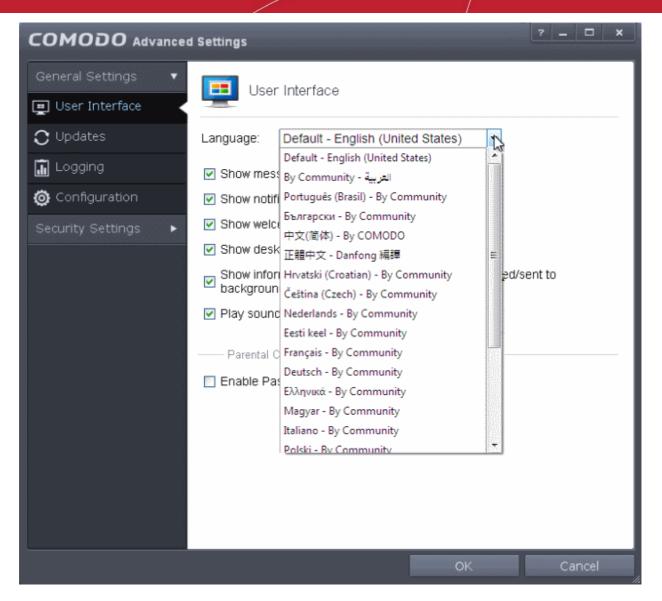

The category has the following sections:

- User Interface
- Updates
- Logging
- Configuration

6.1.1. Customize User Interface

The 'User Interface' tab lets you choose the interface language and customize the look and feel of Comodo Internet Security according to your preferences. You can also configure how messages are displayed and enable password protection for your settings.

COMODO Creating Trust Online

- Language Settings Comodo Internet Security is available in multiple languages. You can switch between installed languages by selecting from the 'Language' drop-down menu (*Default = English (United States)*).
- Show messages from COMODO Message Center If enabled, Comodo Message Center messages will periodically appear to keep you abreast of news in the Comodo world.

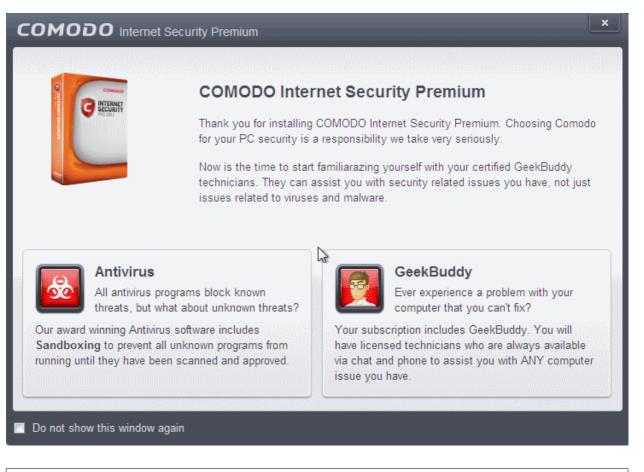

They contain news about product updates, occasional requests for feedback, info about other Comodo products you may be interested to try and other general news. (*Default = Enabled*).

 Show notification messages - These are the CIS system notices that appear in the bottom right hand corner of your screen (just above the tray icons) and inform you about the actions that CIS is taking and any CIS status updates. For example ' Comodo Firewall is learning ' or 'Defense+ is learning ' are generated when these modules are learning the

activity of previously unknown components of trusted applications. Antivirus notifications will also be displayed if you have selected 'Do not show antivirus alerts' check box in **Antivirus > Real-time Scan settings** screen. Clear this check box if you do not want to see these system messages (**Default = Enabled**).

Show Welcome Screen on start up - If enabled, CIS will display a welcome screen when the application first starts.
 (Default = Enabled):

Tip: You can disable the Welcome Screen by selecting the checkbox 'Do not show this window again' in the window itself.

Show desktop widget - The CIS desktop widget displays at-a-glance information about CIS security status, speed of
outgoing and incoming traffic, number of background tasks and links to social networking sites.

СОМ	ספסו
Se	cure
0 B/s	0 B/s
3	
2 📀	🧿 🕘
	f
	~

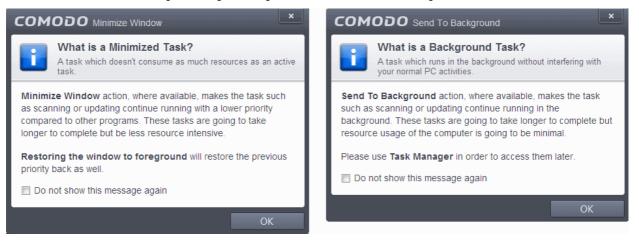

The widget also acts as a shortcut to open the CIS main interface, the Task Manager, your browsers and so on. If you do not want the widget to be displayed on your desktop, clear this checkbox. (*Default = Enabled*).

Tip: You can disable the widget from the CIS system tray icon. Right click on the CIS system tray icon and deselect the 'Show'

COMODO Creating Trust Online

option that appears on hovering the mouse cursor on 'Widget' .

• Show information messages when tasks are minimized/sent to background - CIS displays messages explaining the effects of minimizing or moving a running task like an AV scan to the background:

If you do not want these messages to be displayed, clear this check-box (Default = Enabled).

Tip: You can also disable these messages in the message window itself by selecting 'Do not show this message again'

- Play sound when an alert is shown CIS generates a chime whenever it raises a security alert to grab your attention. If you do not want the sound to be generated, clear this check box (*Default = Enabled*)
- Enable Password Protection Enforces password protection for all important configuration sections and wizards within the interface. If you enable this feature, you must first specify and confirm a password by clicking the 'Set Password' link. You will then be asked for this password whenever you try to access important configuration areas (for example, all sections in the General Tasks, Firewall Tasks, Sandbox Tasks and Advanced Tasks will request the password).

This setting is of particular value to parents, network administrators and administrators of shared computers to prevent other users from modifying critical settings and exposing the machine to threats (*Default = Disabled*).

To enable password protection

 Select the 'Enable Password Protection' check-box then click 'Set Password'. The Change password dialog will appear.

COMODO Change password	?	×
Change password		
Password:		
Retype:		
ОК	Canc	el

Enter and confirm your password then click OK. Make sure to create a strong password containing a mixture
of uppercase and lowercase characters, numbers and symbols so that it cannot be easily guessed by

others.

6.1.2. Configure Program and Virus Database Updates

The 'Updates' area allows you to configure settings that govern CIS program and virus database updates.

This screen can be accessed by clicking 'Updates' under the 'General Settings' section of 'Advanced Settings':

COMODO Advances	d Settings 2 - 🗆 🗙
General Settings 🔹 🔻	
💻 User Interface	
C Updates	Check for program updates every 1 🗘 day(s)
🚡 Logging	Automatically download program updates
🙆 Configuration	If checked, program updates will be automatically downloaded. You will still need to choose when to install them.
Security Settings 🕨	Check for database updates every 6 thour(s)
	Options
	Do NOT check for updates if I am using these connections
	Do NOT check for updates if running on battery
	Proxy and Host Settings
	OK Cancel

- Check program updates every NN day(s) Enables you to set the interval at which CIS will check for program updates. Select the interval in days from the drop-down combo box. (Default = 1 day)
- Automatically download program updates Instructs CIS to automatically download program updates as soon as they are available. (Default=Enabled)
- Check for database updates every NN hour(s)/day(s) Enables you to set the interval at which CIS will check for virus signature database updates. Select the interval in hours or days from the first drop-down combo box and set hours or days in the second drop-down box. (Default and recommended = 6 hours)
- Do NOT check updates if am using these connections Enables you to restrict CIS from checking for updates if you use certain types of Internet connection. For example, you may not wish to check updates if using a wireless connection you know to be slow or not secure (*Default = Disabled*)

To do this:

- · Select the 'Do NOT check updates if am using these connections' check-box
- Then click the 'these connections'. The connections dialog will appear with the list of connections you use.

COMODO Creating Trust Online*

Comodo Internet Security 6.3 - User Guide

COMODO Connections		? X
Connection Names		
Local Area Connection		
	ОК	Cancel

- Select the connection through which you do not want CIS to check for updates and click OK.
- Do NOT check for updates if running on battery If enabled, CIS will not download updates if it detects your computer is running from battery power. This is intended to extend battery lifetime on laptops. (Default = Enabled)
- Proxy and Host Settings Allows you to select the host from which updates are downloaded. By default, CIS will
 directly download updates from Comodo servers. However, advanced users and network admins may wish to first
 download updates to a proxy/staging server and have individual CIS installations collect the updates from there. The
 'Proxy and Host Settings' interface allows you to point CIS at this proxy/staging server. This helps conserve overall
 bandwidth consumption and accelerates the update process when large number of endpoints are involved.

Note: You first need to install Comodo Offline Updater in order to download updates to your proxy server. This can be downloaded from http://enterprise.comodo.com/security-solutions/endpoint-security/endpoint-security-manager/free-trial.php

To configure updates via proxy server

 Click 'Proxy and Host Settings' at the bottom of the 'Updates' interface. The 'Proxy and Host Settings' interface will open.

сомор	O Proxy and Host Settings	?		×
🗹 Use proxy

			_	
	OK	С	ance	

- Select the 'Use Proxy' check-box.
- Enter the host name and port numbers. If the proxy server requires access credentials, select the 'Use Authentication' check-box and enter the login / password accordingly.
- You can add multiple servers from which updates are available. To do this, click the handle at the bottom
 center of the 'Servers' panel, click the 'Add' button then enter the host name in the 'Edit Property' dialog.

COMODO Edit property	?	×	
Add a new host			
ок с	anc	el	

- If you specify multiple servers:
 - Activate or deactivate each update server by selecting or deselecting the check-box alongside it
 - Use the 'Move Up' and 'Move Down' buttons to specify the order in which each server should be consulted for updates. CIS will commence downloading from the first server that contains new updates.
- Click 'OK' for your settings to take effect.

6.1.3. Log Settings

By default, Comodo Internet Security maintains detailed logs of all Antivirus, Firewall and Defense+ events. Logs are also created for 'Alerts Displayed', 'Tasks Launched' and 'Configuration Changes'.

- This 'Logging' interface allows you to specify whether you want to enable logging; the maximum size of the log file and how CIS should react if the maximum file size is exceeded.
- Note: If you wish to actually view, manage and export logs, then you need to open the 'View Logs' interface under 'General Settings' (Tasks > General Settings > View Logs)

	d Settings				
General Settings 🔹 🔻	Logging				
🗘 Updates	Enable Logging (Recommended)				
🚡 Logging	This option enables recording of critical events such as malware events, firewall events etc.				
 Configuration Security Settings 	If log file's size exceeds 20 Mb(s)				
	Oelete it and create a new one				
	Move it to Specified folder				
	OK Cancel				

- Enable Logging CIS logs events only if this setting is enabled. (Default = Enabled)
- If the log file's size exceeds (Mb(s)) Enables you to specify behavior when the log file reaches a certain size. You can decide on whether to maintain log files of larger sizes or to discard them depending on your future reference needs and the storage capacity of your hard drive.
 - Specify the maximum limit for the log file size (in MB) in the text box beside 'If the log file's size exceeds

(MB)' (Default = 20MB).

If you want to discard the log file if it reaches the maximum size, select 'Delete it and create a new one'. Once the log file reaches the specified maximum size, it will be automatically deleted from your system and a new log file will be created with the log of events occurring from that instant (*Default = Enabled*).

If you want to save the log file even if it reaches the maximum size, select 'Move it to' and select a destination folder for the log file (*Default = Disabled*).

	This option enables recording of critical events such as maiware event firewall events etc.	
Security Settings	If log file's size exceeds 20 Mb(s)	
	 Delete it and create a new one Move it to <u>Specified folder</u> 	
	Pick a Directory Pick a Directory <t< th=""><th></th></t<>	

The selected folder path will appear beside 'Move it to'.

LII LOGANA	
Security Settings	If log file's size exceeds 20 Mb(s)
	Delete it and create a new one
	Move it to <u>C:\CIS LOG Archive</u>

Once the log file reaches the maximum size, it will be automatically moved to the selected folder and a new log file will be created with the log of events occurring from that instant.

6.1.4. Manage CIS Configurations

Comodo Internet Security allows you to maintain, save and export multiple configurations of your security settings as configuration profiles. This is especially useful if you are a network administrator looking to roll out a standard security configuration across multiple computers. If you are upgrading your system and there is a need to uninstall and re-install Comodo Internet Security then it can be great time-saver to export your configuration settings beforehand. After re-installation, you can import your previous settings and avoid having to configure everything over again.

Note: Any changes you make over time will be automatically stored in the currently active profile. If you want to export your current settings then export the 'Active' profile.

This panel can be accessed by clicking 'Configuration' under the 'General Settings' section of 'Advanced Settings':

COMODO Advanced	l Settings	? <u>–</u> 🗆 X
General Settings 🔹 🔻		
C Updates	This section lets you import, export and switch configurations	i.
🚡 Logging	Configurations	Active
Ocnfiguration	COMODO - Internet Security	Active
Security Settings 🛛 🕨	COMODO - Proactive Security	
	COMODO - Firewall Security	
	ОК	Cancel

The currently active configuration is indicated under the 'Active' column. Click the following links for more details:

- Comodo Preset Configurations
- Importing/Exporting and Managing Personal Configurations

6.1.4.1. Comodo Preset Configurations

By default, CIS is installed with 'COMODO - Internet Security' as the active configuration. Reminder - the active profile is, in effect, your current CIS settings. Any changes you make to settings are recorded in the active profile. You can change the active profile at any time from the 'Configuration' panel.

Click the links below to find out more details on each configuration:

- COMODO Internet Security
- COMODO Proactive Security
- COMODO Firewall Security

COMODO - Internet Security - This configuration is activated by default, when both Antivirus and Firewall components are installed (i.e. the complete installation). The firewall is always set to 'Safe mode' but, according to the results of the malware scan performed during the setup process, the HIPS setting may vary. If no malware is found, HIPS is set to Clean PC mode.

Otherwise, the default is 'Safe Mode'.

- Behavior Blocker is Enabled.
- Only commonly infected files/folders are protected against infection.
- Only commonly exploited COM interfaces are protected.
- Defense+ is tuned to prevent infection of the system.

If you wish to switch to Internet Security option, you can **select** the option from the 'Configuration' panel.

COMODO - Proactive Security - This configuration turns CIS into the ultimate protection machine. All possible protections are activated and all critical COM interfaces and files are protected. During the setup, if only Comodo Firewall installation option is selected, the next screen allows users to select this configuration as default CIS configuration. If selected, Firewall is always set to Safe mode. But according to the malware scanning results performed during the setup process, if no malware is found, HIPS is set to Clean PC mode. Otherwise, the default is Safe mode.

If you wish to switch to Proactive Security option, you can select the option from the 'Configuration' panel.

COMODO - Firewall Security - This configuration is activated when the user chooses to install Firewall only and selects optimum protection settings for HIPS. Firewall is always set to Safe mode. But according to the malware scanning results performed during the setup process, if no malware is found, HIPS is set to Clean PC mode. Otherwise, the default is Safe mode.

- Behavior Blocker is disabled.
- Computer Monitor and Keyboard are NOT monitored.
- Only commonly infected files/folders are protected against infection.
- Only commonly exploited COM interfaces are protected.
- HIPS is tuned to prevent infection of the system and detect Internet access request leaks even if it is infected.

If you wish to switch to Firewall Security option, you can **select** the option from the 'Configuration' panel.

6.1.4.2. Importing/Exporting and Managing Personal Configurations

The CIS configurations can be exported/imported, activated and managed through the Configuration panel accessible by clicking 'Configuration' tab under 'General Settings' in 'Advanced Settings' interface.

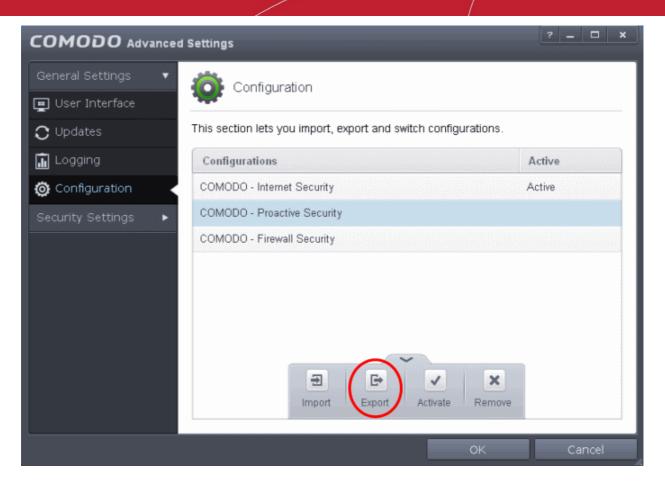

Click the area on which you would like more information:

- Export a stored configuration to a file
- Import a saved configuration from a file
- Select a different active configuration setting
- Delete a inactive configuration profile

Exporting a stored configuration to a file

1. Open 'Configurations' panel by clicking 'Configuration' under General Settings in 'Advanced Tasks' interface

COMODO Creating Trust Online*

2. Select the configuration, click the handle at the foot of the interface and choose 'Export'. The 'Select a path to export the configuration' dialog will open.

Select a path to export the configuration			×

	ОК	Cancel

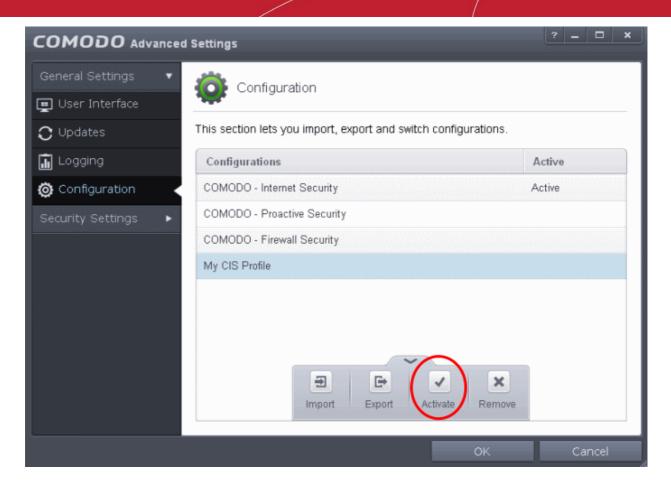

Selecting and Implementing a different configuration profile

You can change the configuration profile active in CIS at any time from the 'Configurations' panel

To change the active configuration profile

- 1. Open 'Configurations' panel by clicking 'Configuration' under General Settings in 'Advanced Tasks' interface
- 2. Select the configuration profile you want to activate, click the handle at the foot of the interface and choose Activate from the options.

COMODO Creating Trust Online*

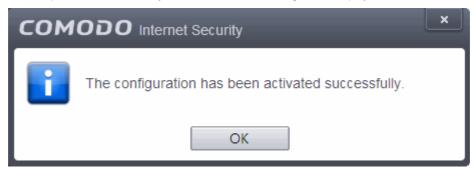

You will be prompted to save the changes to the settings in you current profile before the new profile is deployed.

3. Click 'Yes' to save any setting changes in the current configuration, else click 'No'.

The new profile will be implemented immediately and the confirmation dialog will be displayed.

Deleting an inactive configuration profile

You can remove any unwanted configuration profiles from the list of stored configuration profiles. You cannot delete the profile that Comodo Internet Security is currently using - only the inactive ones. For example if the COMODO - Internet Security is the active profile, you can only delete the inactive profiles, 'COMODO - Proactive Security, 'My_CIS_Configuration and so on.

To remove an unwanted profile

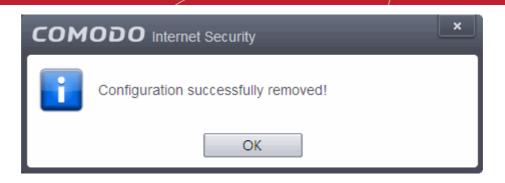

- 1. Open 'Configurations' panel by clicking 'Configuration' under General Settings in 'Advanced Tasks' interface
- 2. Select the configuration profile you want to delete, click the up arrow from the bottom center and choose Remove from the options.

A confirmation dialog will be displayed.

3. Click 'Yes'. The configuration profile will be deleted from your computer.

6.2. Security Settings

The Security Settings area enables you to perform granular configuration of the Antivirus, Firewall, Defense+ and File ratings components of Comodo Internet Security. Although these settings play a large part in governing the level of security offered by the application, Comodo Internet Security 6.2 does ship with secure defaults for all major settings so provides 'out-of-the-box' protection for all users.

COMODO Advanced Settings					
General Settings 🔹 🕨	Realtime Scan

6.2.1. Antivirus Settings

The Antivirus Settings category has sub-sections that allow you to configure Real Time Scans (a.k.a 'On-Access' scanning), Custom Scans, and Exclusions (a list of the files you consider safe).

Click the following links to jump to each section:

- Real Time Scan To set the parameters for on-access scanning;
- Custom Scan To create scan profiles and run custom scans, schedule custom scans and set the parameters for custom scans;
- Exclusions To see the list of ignored threats and to set the parameters for Exclusions.

6.2.1.1. Real-time Scanner Settings

The real-time scanner (aka 'On-Access Scan') is always ON and checks files in real time when they are created, opened or copied (as soon as you interact with a file, Comodo Antivirus checks it). This instant detection of viruses assures you, the user, that your system is perpetually monitored for malware and enjoys the highest level of protection.

The real-time scanner also scans system memory on start. If you launch a program or file which creates destructive anomalies, then the scanner blocks it and alerts you immediately. Should you wish, however, you can specify that CIS does not show you alerts if viruses are found but automatically deals with them (choice of auto-quarantine or auto-block/delete). It is highly recommended that leave the Real Time Scanner enabled to ensure your system remains continually free of infection.

To open the Real Time Scan settings panel

• Click 'Tasks > Advanced Tasks > Open Advanced Settings > Security Settings > Antivirus > Realtime Scan':

COMODO Creating Trust Online*

	d Settings 🥂 🗕 🗖 🗙
General Settings F	Realtime Scan
 Antivirus Realtime Scan Scans Exclusions Defense+ Firewall File Rating 	 Enable Realtime Scan (Recommended) This option enables virus scanning when your computer is used and prevents threats before they enter your system. Enable scanning optimizations (Recommended) Use this option to activate the performance improving technologies for realtime scanning Detection Run cache builder when computer is idle Scan computer memory after the computer starts Do not show antivirus alerts Quarantine Threats • Decompress and scan archive files of extension(s): *_jar, *.exe Set new on-screen alert timeout to 120 secs Set new maximum file size limit to 40 MB Set new maximum script size limit to 40 MB Use heuristics scanning Low •
	Detect potentially unwanted applications
	OK Cancel

- Enable Realtime Scan Allows you to enable or disable real-time scanning. Comodo recommends to leave this
 option selected.(Default=Enabled)
- Enable scanning optimizations On selecting this option, the antivirus will employ various optimization techniques like running the scan in the background in order to reduce consumption of system resources and speed-up the scanning process (*Default = Enabled*)

Note: The above two settings can be modified from the 'Advanced View' of the Home screen by clicking the status link beside Antivirus. If you choose Disabled option, both 'Enable Realtime Scan' and 'Enable scanning optimizations' will be disabled. If you choose 'Stateful', both the settings will be enabled and on choosing 'On Access', only 'Enable Realtime Scan' will be enabled.

Detection Settings

- Run cache builder when computer is idle CIS runs the Antivirus Cache Builder whenever the computer is idle, to boost the real-time scanning. If you do not want the Cache Builder to run, deselect this option (*Default = Enabled*).
- Scan computer memory after the computer starts When this check box is selected, the Antivirus scans the system memory during system start-up (*Default = Disabled*)
- Do not show antivirus alerts Allows you to configure whether or not to show antivirus alerts when malware is
 encountered. Choosing 'Do not show antivirus alerts' will minimize disturbances but at some loss of user awareness. If
 you choose not to show alerts then you have a choice of default responses that CIS should automatically take either
 'Block Threats' or 'Quarantine Threats'. (*Default = Enabled*)
 - Quarantine Threats Moves the detected threat(s) to quarantine for your later assessment and action. (*Default*)
 - Block Threats Stops the application or file from execution, if a threat is detected in it.

Note: If you deselect this option and thus enable alerts then your choice of guarantine/block is presented within the alert itself.

 Decompress and scan archive files of extension(s) - Comodo Antivirus can scan all types of archive files such as .jar, RAR, WinRAR, ZIP, WinZIP ARJ, WinARJ and CAB if this option is left selected. You will be alerted to the presence of viruses in compressed files before you even open them. (Default = Enabled)

You can add the archive file types that should be decompressed and scanned by Comodo Antivirus.

Click link on the file type displayed at the right end. The 'Manage Extensions' dialog will open.

C	OMODO Manage Extensions	?		×
ſ	Extensions			
	*.jar			
	*.exe			
	Add Remove			
	ОК	С	ance	

To add a file type, click the up arrow at the bottom center and click 'Add'.

COMODO Edit property		? X
Set archive extension		
	ОК	Cancel

- Enter the extension (e.x.: rar, msi, zip, 7z, cab and so on) to be included in the Edit property dialog and click OK.
- Repeat the process to add more extensions
- Click OK in the 'Manage Extensions' dialog
- Set new on-screen alert timeout to This box allows you to set the time period (in seconds) for which the alert
 message should stay on the screen. (Default = 120 seconds)
- Set new maximum file size limit to This box allows you to set a maximum size (in MB) for the individual files to be scanned during on-access scanning. Files larger than the size specified here, will not be not scanned. (*Default = 40 MB*)
- Set new maximum script size limit to This box allows you to set a maximum size (in MB) for the script files to be scanned during on-access scanning. Files larger than the size specified here, are not scanned. (*Default = 4 MB*)
- Use heuristics scanning Allows you to enable or disable Heuristics scanning and define scanning level. (Default = Enabled)

Heuristic techniques identify previously unknown viruses and Trojans. 'Heuristics' describes the method of analyzing

the code of a file to ascertain whether it contains code typical of a virus. If it is found to do so then the application deletes the file or recommends it for quarantine. Heuristics is about detecting virus-like behavior or attributes rather than looking for a precise virus signature that match a signature on the virus blacklist.

This is a quantum leap in the battle against malicious scripts and programs as it allows the engine to 'predict' the existence of new viruses - even if it is not contained in the current virus database.

Leave this option selected to keep Heuristics scanning enabled. Else, deselect this checkbox. If enabled, you can select the level of Heuristic scanning from the drop-down:

- Low 'Lowest' sensitivity to detecting unknown threats but will also generate the fewest false positives. This
 setting combines an extremely high level of security and protection with a low rate of false positives.
 Comodo recommends this setting for most users. (*Default*)
- **Medium** Detects unknown threats with greater sensitivity than the 'Low' setting but with a corresponding rise in the possibility of false positives.
- **High** Highest sensitivity to detecting unknown threats but this also raises the possibility of more false positives too.
- Detect potentially unwanted applications When this check box is selected, Antivirus scans also scans for
 applications that (i) a user may or may not be aware is installed on their computer and (ii) may functionality and
 objectives that are not clear to the user. Example PUA's include adware and browser toolbars. PUA's are often
 installed as an additional extra when the user is installing an unrelated piece of software. Unlike malware, many PUA's
 are 'legitimate' pieces of software with their own EULA agreements. However, the 'true' functionality of the software
 might not have been made clear to the end-user at the time of installation. For example, a browser toolbar may also
 contain code that tracks a user's activity on the Internet.

6.2.1.2. Scan Profiles

The Scan Profiles area allows you to view, edit, create and run custom virus scans. Each profile is a collection of scanner settings that tell CIS:

- Where to scan (which files, folders or drives should be covered by the scan)
- When to scan (you have the option to specify a schedule)
- How to scan (options that let you specify the behavior of the scan engine when running this profile)

To open the panel

• Click Security Settings > Antivirus > 'Scans' tab in the 'Advanced Settings' panel.

CIS ships with two predefined scan profiles:

- Full Scan Covers every local drive, folder and file on your system.
- Quick Scan Covers critical areas in your system which are highly prone to infection from viruses, rootkits and other malware. This includes system memory, auto-run entries, hidden services, boot sectors, important registry keys and system files. These areas are responsible for the stability of your computer and keeping them clean is essential.

You can run a profile-scan immediately by clicking the 'Scan' link alongside it. Click the handle at the foot of the interface if you wish to edit, remove or add a profile.

Click the following links for more details on:

- Creating a Scan Profile
- Running a custom scan

To create a custom profile

• Click the handle at the bottom of the interface then click the 'Add' button:

Options:

.

- Enable scanning optimizations On selecting this option, the antivirus will employ various optimization techniques like running the scan in the background in order to speed-up the scanning process (*Default* = *Enabled*).
- Decompress and scan compressed files When this check box is selected, the Antivirus scans archive files such as .ZIP and .RAR files. Supported formats include RAR, WinRAR, ZIP, WinZIP ARJ, WinARJ and CAB archives (*Default = Enabled*).
- Use cloud while scanning Selecting this option enables the Antivirus to detect the very latest viruses
 more accurately because the local scan is augmented with a real-time look-up of Comodo's online signature
 database. With Cloud Scanning enabled your system is capable of detecting zero-day malware even if your
 local anitvirus database is out-dated. (Default = Disabled).
- Automatically clean threats Enables you to select the action to be taken against the detected threats and
 infected files automatically from disinfecting Threats and moving the threats to quarantine. (Default =
 Disabled).
- Use heuristics scanning Enables you to select whether or not Heuristic techniques should be applied on scans in this profile. You are also given the opportunity to define the heuristics scan level. (Default = Disabled).

Background Info: Comodo Internet Security employs various heuristic techniques to identify previously unknown viruses and Trojans. 'Heuristics' describes the method of analyzing the code of a file to ascertain whether it contains code patterns similar to those in known viruses. If it is found to do so then the application deletes the file or recommends it for quarantine. Heuristics is about detecting 'virus-like' traits or attributes rather than looking for a precise virus signature that matches a signature on the virus blacklist.

This allows CIS to 'predict' the existence of new viruses - even if it is not contained in the current virus database.

- Low Lowest' sensitivity to detecting unknown threats but will also generate the fewest false positives. This setting combines an extremely high level of security and protection with a low rate of false positives. Comodo recommends this setting for most users.
- **Medium** Detects unknown threats with greater sensitivity than the 'Low' setting but with a corresponding rise in the possibility of false positives.
- **High** Highest sensitivity to detecting unknown threats but this also raises the possibility of more false positives too.
- Limit maximum file size to Select this option if you want to impose size restrictions on files being scanned. Files of size larger than that specified here, are not scanned, if this option is selected (*Default* = 40 MB).
- Run Scan with Enables you to set the priority of the scanning from High to Low and to run at background. (Default = Disabled).
- Update virus database before running Selecting this option makes CIS to check for virus database
 updates and if available, update the database before commencing the scan. (Default = Enabled).
- Detect potentially unwanted applications When this check box is selected, Antivirus scans also scans for applications that (i) a user may or may not be aware is installed on their computer and (ii) may functionality and objectives that are not clear to the user. Example PUA's include adware and browser toolbars. PUA's are often installed as an additional extra when the user is installing an unrelated piece of software. Unlike malware, many PUA's are 'legitimate' pieces of software with their own EULA agreements. However, the 'true' functionality of the software might not have been made clear to the end-user at the time of installation. For example, a browser toolbar may also contain code that tracks a user's activity on the Internet. (Default = Enabled).
- If you want the scan to be performed periodically, set a Schedule for the custom scan by clicking 'Schedule'

	C:\Program Files\pdf995\setup.exe

To add item(s) to excluded paths

· Click the handle from the bottom center and click on 'Add' from the options

You can choose to add a:

- File Group
- Drive partition/Folder

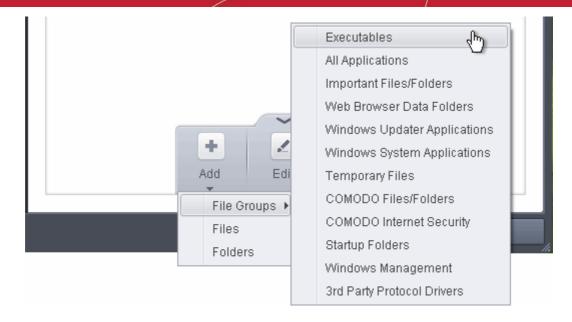

or

• an individual file

Adding a File Group

Choosing File Groups allows you to exclude a category of pre-set files or folders. For example, selecting 'Executables' would enable you to exclude all files with the extensions .exe .dll .sys .ocx .bat .pif .scr .cpl . Other such categories available include 'Windows System Applications', 'Windows Updater Applications', 'Start Up Folders' etc - each of which provide a fast and convenient way to apply a generic ruleset to important files and folders.

COMODO Creating Trust Online

To view the file types and folders that are affected by choosing one of these options, you need to visit the 'File Groups' interface.

The 'File Groups interface can be accessed by the following method:

Navigate to Advanced Settings > Defense+ > HIPS > Protected Files, click the up arrow from the bottom
of the interface and select 'Groups' from the options.

The file groups will be added to Excluded Paths.

6.2.2. Defense+ Settings

Defense+ is a collective term that covers the Host Intrusion Prevention (HIPS), sandboxing and behavior blocker components of Comodo Internet Security. Together, these technologies ensure all applications, processes and services on your PC behave in a secure manner - and are prevented from taking actions that could damage your computer or your data.

COMODO Creating Trust Online

🙆 Behavior Blocker	Advanced
# Sandbox	Enable adaptive mode under low system resources
▶ Firewall	Block all unknown requests when the application is not running
► File Rating	Enable enhanced protection mode (Requires a system restart)
	OK Cancel

The Defense+ settings area allows you to configure the following:

- HIPS
 - HIPS Behaviour Settings
 - Active HIPS Rules
 - Predefined HIPS Rule Sets
 - Protected Objects
- Behavior Blocker
- Sandbox Settings

6.2.2.1. HIPS Behavior Settings

HIPS constantly monitors system activity and only allows executables and processes to run if they comply with the prevailing security rules that have been enforced by the user. For the average user, Comodo Internet Security ships with a default HIPS ruleset that works 'out of the box' - providing extremely high levels of protection without any user intervention. For example, HIPS automatically protects system-critical files, folders and registry keys to prevent unauthorized modifications by malicious programs. Advanced users looking to take a firmer grip on their security posture can quickly create custom policies and rulesets using the powerful rules interface.

Note for beginners: This page often refers to 'executables' (or 'executable files'). An 'executable' is a file that can instruct your computer to perform a task or function. Every program, application and device you run on your computer requires an executable file of some kind to start it. The most recognizable type of executable file is the '.exe' file. (e.g., when you start Microsoft Word, the executable file 'winword.exe' instructs your computer to start and run the Word application). Other types of executable files include those with extensions .cpl .dll, .drv, .inf, .ocx, .pf, .scr, .sys.

Unfortunately, not all executables can be trusted. Some executables, broadly categorized as malware, can instruct your computer to delete valuable data; steal your identity; corrupt system files; give control of your PC to a hacker and much more. You may also have heard these referred to as Trojans, scripts and worms.

- The HIPS Settings panel allows you to enable/disable HIPS, set its security level and configure its general behavior.
- The HIPS Settings panel can be accessed by clicking Security Settings > Defense+ > HIPS > 'HIPS Settings' tab from 'Advanced Settings' interface

COMODO Advanced	d Settings ? _ 🗆 ×

• Enable HIPS - Allows you to enable/disable the HIPS protection.(Default=Disabled)

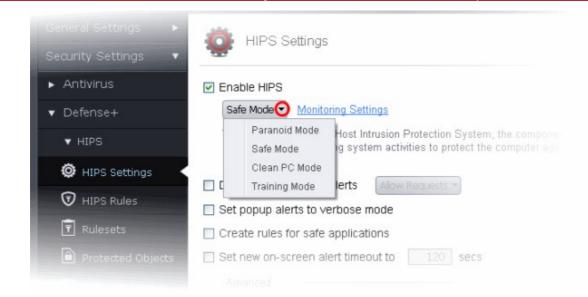

Note: The HIPS settings can also be configured in the 'Advanced View' of the 'Home' screen by clicking the status link beside HIPS in the 'Defense+ and Sandbox' pane.

If enabled, you can choose the security level and configure the monitoring settings for the HIPS component.

Configuring Security Level of HIPS

The security level can be chosen from the drop-down that becomes active only on enabling HIPS:

COMODO Creating Trust Online*

The choices available are:

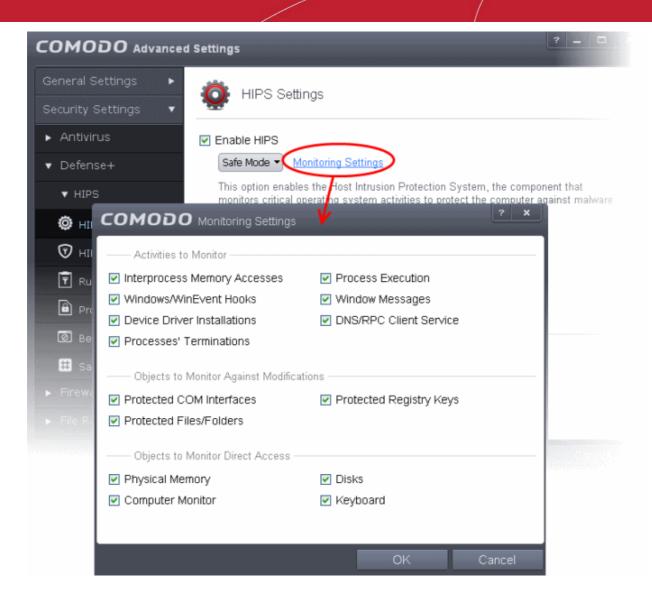

- **Paranoid Mode**: This is the highest security level setting and means that Defense+ monitors and controls all executable files apart from those that you have deemed safe. Comodo Internet Security does not attempt to learn the behavior of any applications even those applications on the Comodo safe list and only uses *your* configuration settings to filter critical system activity. Similarly, the Comodo Internet Security does automatically create 'Allow' rules for any executables although you still have the option to treat an application as 'Trusted' at the HIPS alert. Choosing this option generates the most amount of HIPS alerts and is recommended for advanced users that require complete awareness of activity on their system.
- Safe Mode: While monitoring critical system activity, Defense+ automatically learns the activity of executables and applications certified as 'Safe' by Comodo. It also automatically creates 'Allow' rules these activities, if the checkbox 'Create rules for safe applications' is selected. For non-certified, unknown, applications, you will receive an alert whenever that application attempts to run. Should you choose, you can add that new application to the safe list by choosing 'Treat this application as a Trusted Application' at the alert. This instructs the Defense+ not to generate an alert the next time it runs. If your machine is not new or known to be free of malware and other threats as in 'Clean PC Mode' then 'Safe Mode' is recommended setting for most users combining the highest levels of security with an easy-to-manage number of HIPS alerts.
- Clean PC Mode: From the time you set the slider to 'Clean PC Mode', Defense+ learns the activities of the
 applications currently installed on the computer while all new executables introduced to the system are monitored and
 controlled. This patent-pending mode of operation is the recommended option on a new computer or one that the user
 knows to be clean of malware and other threats. From this point onwards HIPS alerts the user whenever a new,
 unrecognized application is being installed. In this mode, the files in 'Unrecognized Files' are excluded from being
 considered as clean and are monitored and controlled.
- Training Mode: Defense+ monitors and learn the activity of any and all executables and create automatic 'Allow' rules until the security level is adjusted. You do not receive any HIPS alerts in 'Training Mode'. If you choose the 'Training Mode' setting, we advise that you are 100% sure that all applications and executables installed on your computer are safe to run.

Configuring the Monitoring Settings

The activities, entities and objects that should monitored by HIPS can be configured by clicking the Monitoring Settings link.

Note: The settings you choose here are universally applied. If you disable monitoring of an activity, entity or object using this interface it completely switches off monitoring of that activity on a *global* basis - effectively creating a universal 'Allow' rule for that activity. This 'Allow' setting *over-rules* any Ruleset specific 'Block' or 'Ask' setting for that activity that you may have selected using the 'Access Rights' and 'Protection Settings' interface.

COMODO Creating Trust Online*

Activities To Monitor:

- Interprocess Memory Access Malware programs use memory space modification to inject malicious code for numerous types of attacks, including recording your keyboard strokes; modifying the behavior of the invaded application; stealing confidential data by sending confidential information from one process to another process etc. One of the most serious aspects of memory-space breaches is the ability of the offending malware to take the identity of the invaded process, or 'impersonate' the application under attack. This makes life harder for traditional virus scanning software and intrusion-detection systems. Leave this box checked and HIPS alerts you when an application attempts to modify the memory space allocated to another application (*Default = Enabled*).
- Windows/WinEvent Hooks In the Microsoft Windows® operating system, a hook is a mechanism by which a
 function can intercept events (messages, mouse actions, keystrokes) before they reach an application. The function
 can act on events and, in some cases, modify or discard them. Originally developed to allow legitimate software
 developers to develop more powerful and useful applications, hooks have also been exploited by hackers to create
 more powerful malware. Examples include malware that can record every stroke on your keyboard; record your mouse
 movements; monitor and modify all messages on your computer; take over control of your mouse and keyboard to
 remotely administer your computer. Leaving this box checked means that you are warned every time a hook is
 executed by an untrusted application (Default = Enabled).
- Device Driver Installations Device drivers are small programs that allow applications and/or operating systems to
 interact with a hardware device on your computer. Hardware devices include your disk drives, graphics card, wireless
 and LAN network cards, CPU, mouse, USB devices, monitor, DVD player etc.. Even the installation of a perfectly wellintentioned device driver can lead to system instability if it conflicts with other drivers on your system. The installation
 of a malicious driver could, obviously, cause irreparable damage to your computer or even pass control of that device
 to a hacker. Leaving this box checked means HIPS alerts you every time a device driver is installed on your machine
 by an untrusted application (Default = Enabled).
- Processes' Terminations A process is a running instance of a program. (for example, the Comodo Internet Security)

process is called 'cis.exe'. Press 'Ctrl+Alt+Delete' and click on 'Processes' to see the full list that are running on your system). Terminating a process, obviously, terminates the program. Viruses and Trojan horses often try to shut down the processes of any security software you have been running in order to bypass it. With this setting enabled, Defense+ monitors and alerts you to all attempts by an untrusted application to close down another application (*Default = Enabled*).

- **Process Execution** Typical malware like rootkits, keylogger etc. would often invoke by itself and runs its process mostly at the background. These processes, invisible at the foreground will act as agents for infecting your computer and to steal your confidential and sensitive information like your credit card details and passwords and pass to hackers. With this setting enabled, the HIPS monitors and alerts you to whenever a process is invoked by an untrusted application. (*Default = Enabled*).
- Windows Messages This setting means Comodo Internet Security monitors and detects if one application attempts to send special Windows Messages to modify the behavior of another application (e.g. by using the WM_PASTE command) (*Default = Enabled*).
- DNS/RPC Client Service This setting alerts you if an application attempts to access the 'Windows DNS service' possibly in order to launch a DNS recursion attack. A DNS recursion attack is a type of Distributed Denial of Service
 attack whereby an malicious entity sends several thousand spoofed requests to a DNS server. The requests are
 spoofed in that they appear to come from the target or 'victim' server but in fact come from different sources often a
 network of 'zombie' pc's which are sending out these requests without the owners knowledge. The DNS servers are
 tricked into sending all their replies to the victim server overwhelming it with requests and causing it to crash. Leaving
 this setting enabled prevents malware from using the DNS Client Service to launch such an attack (Default =
 Enabled).

Background Note: DNS stands for Domain Name System. It is the part of the Internet infrastructure that translates a familiar domain name, such as 'example.com' to an IP address like 123.456.789.04. This is essential because the Internet routes messages to their destinations on the basis of this destination IP address, not the domain name. Whenever you type a domain name, your Internet browser contacts a DNS server and makes a 'DNS Query'. In simplistic terms, this query is 'What is the IP address of example.com?'. Once the IP address has been located, the DNS server replies to your computer, telling it to connect to the IP in question.

Objects To Monitor Against Modifications:

- Protected COM Interfaces enables monitoring of COM interfaces you specified from the COM Protection pane. (Default = Enabled)
- Protected Registry Keys enables monitoring of Registry keys you specified from the Registry Protection pane. (Default = Enabled).
- Protected Files/Folders enables monitoring of files and folders you specified from the File Protection pane. (Default = Enabled).

Objects To Monitor Against Direct Access:

Determines whether or not Comodo Internet Security should monitor access to system critical objects on your computer. Using direct access methods, malicious applications can obtain data from a storage devices, modify or infect other executable software, record keystrokes and more. Comodo advises the average user to leave these settings enabled:

- Physical Memory: Monitors your computer's memory for direct access by an applications and processes. Malicious programs attempt to access physical memory to run a wide range of exploits the most famous being the 'Buffer Overflow' exploit. Buffer overruns occur when an interface designed to store a certain amount of data at a specific address in memory allows a malicious process to supply too much data to that address. This overwrites its internal structures and can be used by malware to force the system to execute its code (*Default = Enabled*).
- **Computer Monitor:** Comodo Internet Security raises an alert every time a process tries to directly access your computer monitor. Although legitimate applications sometimes require this access, there is also an emerging category of spyware programs that use such access to monitor users' activities. (for example, to take screen shots of your current desktop; to record your browsing activities etc) (*Default = Enabled*).
- **Disks:** Monitors your local disk drives for direct access by running processes. This helps guard against malicious software that need this access to, for example, obtain data stored on the drives, destroy files on a hard disk, format the drive or corrupt the file system by writing junk data (*Default = Enabled*).
- Keyboard: Monitors your keyboard for access attempts. Malicious software, known as 'key loggers', can record every stroke you make on your keyboard and can be used to steal your passwords, credit card numbers and other personal data. With this setting checked, Comodo Internet Security alerts you every time an application attempts to establish direct access to your keyboard (*Default = Enabled*).

Checkbox Options

 Do NOT show popup alerts - Configure whether or not you want to be notified when the HIPS encounters a malware. Choosing 'Do NOT show popup alerts' will minimize disturbances but at some loss of user awareness (*Default = Disabled*).

If you choose not to show alerts then you have a choice of default responses that CIS should automatically take - either 'Block Requests' or 'Allow Requests'.

J	This option enables the Host Intrusion Protection System, the component that monitors critical operating system activities to protect the computer against malware actions.
	Do NOT show popup alerts Allow Requests -
	Set popup alerts to verbose mode
	Create rules for safe applications
on	Set new on-screen alert timeout to 120 secs
	Advanced
tion	Enable adaptive mode under low system resources

- Set popup alerts to verbose mode Enabling this option instructs CIS to display HIPS Alerts in verbose mode, providing more more informative alerts and more options for the user to allow or block the requests (*Default* = *Disabled*).
- Create rules for safe applications Automatically creates rules for safe applications in HIPS Ruleset (Default = Disabled).

Note: HIPS trusts the applications if:

- The application/file is included in the Trusted Files list
- The application is from a vendor included in the Trusted Software Vendors list
- The application is included in the extensive and constantly updated Comodo safelist.

By default, CIS does not automatically create 'allow' rules for safe applications. This helps saving the resource usage, simplifies the rules interface by reducing the number of 'Allowed' rules in it, reduces the number of pop-up alerts and is beneficial to beginners who find difficulties in setting up the rules.

Enabling this checkbox instructs CIS to begin learning the behavior of safe applications so that it can automatically generate the 'Allow' rules. These rules are listed in the **HIPS Rules** interface. The Advanced users can edit / modify the rules as they wish.

Background Note: Prior to version 4.x, CIS would automatically add an allow rule for 'safe' files to the rules interface. This allowed advanced users to have granular control over rules but could also lead to a cluttered rules interface. The constant addition of these 'allow' rules and the corresponding requirement to learn the behavior of applications that are already considered 'safe' also took a toll on system resources. In version 4.x and above, 'allow' rules for applications considered 'safe' are not automatically created - simplifying the rules interface and cutting resource overhead with no loss in security. Advanced users can re-enable this setting if they require the ability to edit rules for safe applications (or, informally, if they preferred the way rules were created in CIS version 3.x).

• Set new on-screen alert time out to: Determines how long the HIPS shows an alert for without any user intervention. By default, the timeout is set at 120 seconds. You may adjust this setting to your own preference.

Advanced HIPS Settings

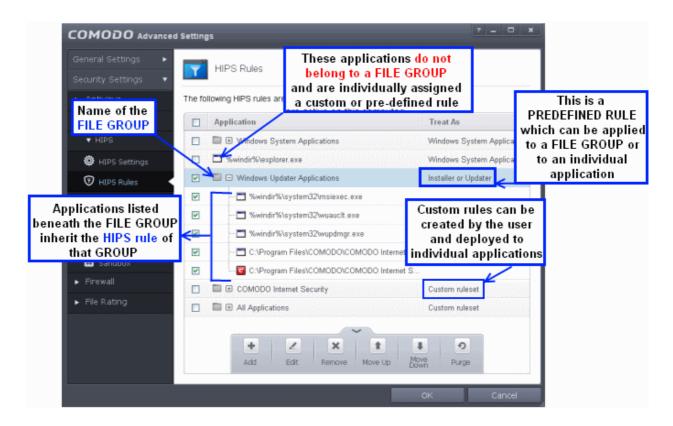

• Enable adaptive mode under low system resources - Very rarely (and only in a heavily loaded system), low memory conditions might cause certain CIS functions to fail. With this option enabled, CIS will attempt to locate and

utilize memory using adaptive techniques so that it can complete its pending tasks. However, the cost of enabling this option may be reduced performance in even lightly loaded systems (*Default = Disabled*).

- Block all unknown requests if the application is closed Selecting this option blocks all unknown execution
 requests if Comodo Internet Security is not running/has been shut down. This is option is very strict indeed and in
 most cases should only be enabled on seriously infested or compromised machines while the user is working to
 resolve these issues. If you know your machine is already 'clean' and are looking just to enable the highest CIS
 security settings then it is OK to leave this box unchecked. (Default = Disabled)
- Enable enhanced protection mode On 64 bit systems, enabling this mode will activate additional host intrusion
 prevention techniques to countermeasure extremely sophisticated malware that tries to bypass regular
 countermeasures. Because of limitations in Windows 7/8 x64 systems, some HIPS functions in previous versions of
 CIS could theoretically be bypassed by malware. Enhanced Protection Mode implements several patent-pending ways
 to improve HIPS. CIS requires a system restart for enabling enhanced protection mode. (*Default = Disabled*)

6.2.2.2. Active HIPS Rules

The HIPS rules tab lists the different groups of applications installed in your system and the Rulesets applied to them. You can change the ruleset applied to selected applications and also create custom rulesets to be applied to selected applications.

The first column, **Application Name**, displays a list of the applications on your system for which a HIPS ruleset has been deployed. If the application belongs to a file group, then all member applications assume the ruleset of the file group. The second column, **Treat as**, column displays the name of the HIPS ruleset assigned to the application or group of applications in column one.

You can use the search option to find a specific file or a company in the list.

To use the search option, click the search icon at the far right in the column header.

~ Applicati C	Search	×<>
Application Treat As	Jows System Applications	Windows System Applic
Swindi	r%\explorer.exe	Windows System Analia

- Click the chevron on the left side of the column header and select the search criteria from the drop-down.
- Enter partly or fully the name of the item as per the selected criteria in the search field.
- Click the right or left arrow at the far right of the column header to begin the search.
- Click the 🗮 icon in the search field to close the search option.

General Navigation:

Clicking the Up arrow at the bottom center of the interface opens an option panel with the following options:

- Add Allows the user to Add a new Application to the list then create it's ruleset. See the section 'Creating or Modifying a HIPS Ruleset'.
- Edit Allows the user to modify the HIPS rule of the selected application. See the section 'Creating or Modifying a HIPS Ruleset'.
- **Remove** Deletes the selected ruleset.

Note: You cannot remove individual applications from a file group using this interface - you must use the 'File Groups' interface to do this.

 Purge - Runs a system check to verify that all the applications for which rulesets are listed are actually installed on the host machine at the path specified. If not, the rule is removed, or 'purged', from the list.

Users can re-order the priority of rules by simply selecting the application name or file group name in question, clicking the handle at the bottom center and selecting 'Move Up' or 'Move Down' from the options. To alter the priority of applications that belong to a file group, you must use the 'File Groups' interface.

Creating or Modifying a HIPS Ruleset

To begin defining an application's HIPS Ruleset

- 1. Select the application or file group that you wish the ruleset to apply to.
- 2. Configure the ruleset for this application.

Step 1 - Select the application or file group that you wish the ruleset to apply to

If you wish to define a rule for a new application (i.e. one that is not already listed), click the handle from the HIPS Rules pane and select 'ADD'. This brings up the 'HIPS Rule' interface as shown below.

COMODO Creating Trust Online*

me:		Browse 🔻	
Use Ruleset: Use a Custom Ruleset		Allowed Ap	plication
Access Rights Protection	n Settings		
Access Name	Action	Exclusions	1
🛲 Run an executable	Ask	Modify (0\0)	
Interprocess Memory Accesses	<u>Ask</u>	Modify (0\0)	
I Windows/WinEvent Hooks	<u>Ask</u>	<u>Modify (0\0)</u>	
🔞 Processes' Termination	<u>Ask</u>	<u>Modify (0\0)</u>	
🌄 Device Drivers' Installation	<u>Ask</u>	<u>Modify (0\0)</u>	
📑 Window Messages	<u>Ask</u>	<u>Modify (0\0)</u>	
😎 Protected COM Interfaces	<u>Ask</u>	Modify (0\0)	
歧 Protected Registry Keys	<u>Ask</u>	<u>Modify (0\0)</u>	

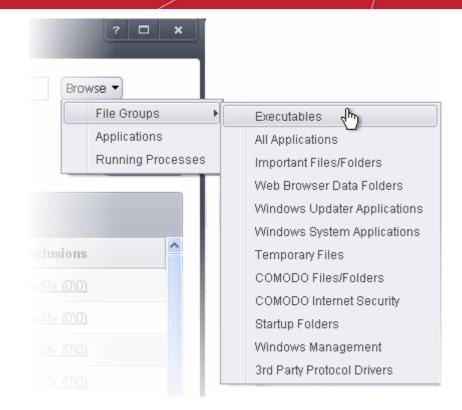

Because you are defining the HIPS rule settings for a new application, you can notice that the 'Name' box is blank. (If you were editing an existing rule instead, then this interface would show that application's name with installation path or application group's name.)

Click 'Browse' to begin.

•

You now have 3 methods available to choose the application for which you wish to create a Ruleset - File Groups; Applications and Running Processes.

 File Groups - Choosing this option allows you to create a HIPS ruleset for a category of pre-set files or folders. For example, selecting 'Executables' would enable you to create a ruleset for all files with the extensions .exe .dll .sys .ocx .bat .pif .scr .cpl . Other such categories available include 'Windows System Applications', 'Windows Updater Applications', 'Start Up Folders' etc - each of which provide a fast and convenient way to apply a generic ruleset to important files and folders.

To view the file types and folders that are affected by choosing one of these options, you need to visit the 'File Groups' interface.

The 'File Groups interface can be accessed by the following method:

- Navigate to Advanced Settings > Defense+ > HIPS > Protected Files, click the up arrow from the bottom of the interface and select 'Groups' from the options.
- 2. Applications This option is the easiest for most users and simply allows you to browse to the location of the application for which you want to deploy the ruleset.

	0	Ж	Cano	el:

Having selected the individual application, running process or file group, the next stage is to Configure the rules for this ruleset.

Step 2 - Configure the HIPS Ruleset for this application

There are two broad options available for selecting a ruleset that applies to an application - Use Ruleset or Use a Custom Ruleset.

1. Use Ruleset - Selecting this option allows the user to quickly deploy an existing HIPS ruleset on to the target application. Choose the ruleset you wish to use from the drop down menu. In the example below, we have chosen 'Allowed Application'. The name of the ruleset you choose is displayed in the 'Treat As' column for that application in the HIPS Rules interface (*Default = enabled*).

	le		? □ ×
Name: C:\Program Files	New SoftwareNew Software.ex	ke B	rowse 🔻
💿 Use Ruleset:		A	llowed Application 👻
🔘 Use a Custom Ruleset			Allowed Application
			Windows System Application
Access Rights	Protection Settings		Isolated Application
Access rights	rotection Settings		Limited Application
Access Name	Action	Exclusi	Installer or Updater
📨 Run an executable	Ask	Modify (DV	D)

Note on 'Installer or Updater' Rule : Applying the Predefined Ruleset 'Installer or Updater' for an application defines it as a trusted installer and all files created by the application will also be considered as trusted files. Some applications may have hidden code that could impair the security of your computer if allowed to create files of their own. Comodo advises you to use this Predefined Ruleset - 'Installer or Updater' with caution. On applying this ruleset to any application, an alert dialog will be displayed, describing the risks involved.

	You are about to define a trusted installer that can change everything in your computer! Furthermore, all the files created by this application will also be treated as trusted installers. If not used with caution, this action can disable the entire security of your computer including antivirus. Do you still want to continue?
--	---

General Note: Predefined Rulesets, once chosen, cannot be modified directly from this interface - they can only be modified and defined using the '**Rulesets**' interface. If you require the ability to add or modify settings for an specific application then you are effectively creating a new, custom ruleset and should choose the more flexible **Use a Custom Ruleset** option instead.

 Use a Custom Ruleset - designed for more experienced users, the 'Custom Ruleset' option enables full control over the configuration specific security ruleset and the parameters of each rule within that ruleset. The Custom ruleset has two main configuration areas - Access Rights and Protection Settings (Default = Disabled).

In simplistic terms 'Access Rights' determine what the application can do to other processes and objects whereas

'Protection Settings' determine what the application can have done to it by other processes.

i. Access Rights - The Process Access Rights tab allows you to determine what activities the applications in your custom ruleset are allowed to execute. These activities are called 'Access Names'.

me: C:\Program Fi	les\New Software\Nev	v Software.e	Browse •	
Use Ruleset: Use a Custom Rule	set			pplication opy from ¬

- Protected Registry	/ Kevs	Ask	Modify (0\0)	

Refer to the section **HIPS Behavior Settings > Activities to Monitor** to view a list of definitions of the Action Names listed above and the implications of choosing the action from 'Ask', 'Allow' or 'Block' for each setting as shown below:

Interprocess Memory Accesses	<u>Ask</u>	<u>Modify (0\0)</u>	
I Windows/WinEvent Hooks	Ask Block	Modify (0\0)	
📧 Processes' Termination	Allow	<u>Modify (0\0)</u>	

- Exceptions to your choice of 'Ask', 'Allow' or 'Block' can be specified for the ruleset by clicking the 'Modify' link on the right.
- Select the 'Allowed Applications' or 'Blocked Applications' tab depending on the type of exception you wish to create.

COMODO Creating Trust Online*

Clicking the handle and selecting 'Add' allows you to choose which applications or file groups you wish this exception to apply to. (**click here** for an explanation of available options).

In **the example above**, the default action for '*Interprocess Memory Access*' is '*Ask*'. This means HIPS will generate an alert asking your permission if 'New Software.exe' tries to modify the memory space of any other program. Clicking 'Modify' then adding 'opera.exe' to the 'Allowed Applications' tab creates an exception to this rule. New Software.exe can now modify the memory space of opera.exe.

ii. **Protection Settings -** Protection Settings determine how protected the application or file group in your ruleset is *against* activities by other processes. These protections are called 'Protection Types'.

		? 🗖 🗙
Name: C:\Program Files\New Software\New Softwa	re.exe	Browse 💌
 O Use Ruleset: ● Use a Custom Ruleset 		Allowed Application 👻
Access Rights Protection Settings		
Protection	State	Exclusions
Interprocess Memory Accesses	Inactive	<u>Modify (D)</u>
I Windows/WinEvent Hooks	Inactive	Modify (D)
👦 Processes' Termination	Inactive	Modify (D)
🥅 Window Messages	Inactive	<u>Modify (0)</u>
	ОК	Cancel

 Select 'Active' to enable monitoring and protect the application or file group against the process listed in the 'Protection Type' column. Select 'Inactive' to disable such protection.

Click here to view a list of definitions of the 'Protection Types' listed above and the implications of activating each setting.

Exceptions to your choice of 'Active' or 'Inactive' can be specified in the application's Ruleset by clicking the 'Modify' link on the right.

3. Click 'OK' to confirm your settings.

6.2.2.3. HIPS Rule Sets

A Pre-defined ruleset is a set of **access rights and protection settings** that has been saved and can be re-used and deployed on multiple applications or groups. Each ruleset is comprised of a number of 'Rules' and each of these 'Rules' is defined by a set of conditions/settings/parameters. 'Predefined rulesets' is a set of rulesets that concern an application's access rights to memory, other programs, the registry etc.

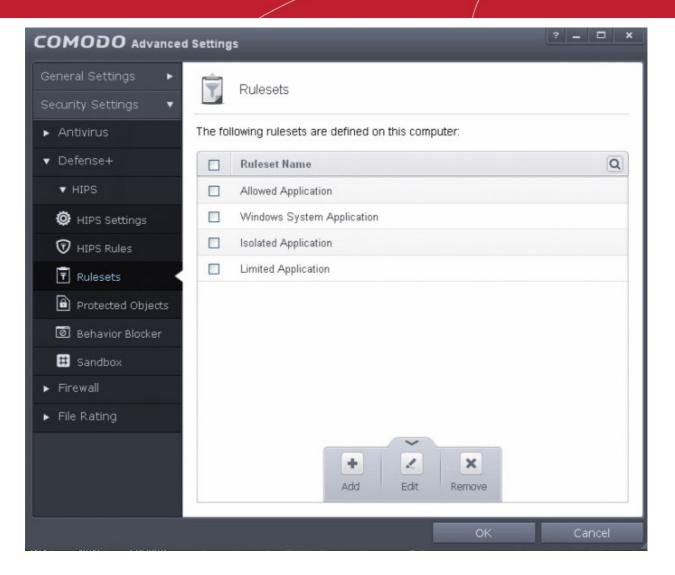

Note: This section is for advanced and experienced users. If you are a novice user to Comodo Internet Security, we advise you first read the **Active HIPS Rules** section in this help guide if you have not already done so.

Although each application's ruleset could be defined from the ground up by individually configuring its constituent rules, this practice may prove time consuming if it had to be performed for every single program on your system. For this reason, Comodo Internet Security contains a selection of rulesets according to broad application categories. Each predefined ruleset has been specifically designed by Comodo to optimize the security level of a certain type of application. Users can, of course, modify these predefined rulesets to suit their environment and requirements.

To configure this category

 Navigate to: Advanced Tasks > Security Settings >Defense+ > HIPS > Rulesets. There are four default Rulesets listed under the 'Rules' column.

COMODO

You can use the search option to find a ruleset in the list.

To use the search option, click the search icon at the far right in the column header.

- Ruleset Na Q Search	×<>
Ruleset Name	
ation	

- Click the chevron on the left side of the column header and select the search criteria from the drop-down.
- Enter partly or fully the name of the ruleset in the search field.
- Click the right or left arrow at the far right of the column header to begin the search.
- Click the 🗮 icon in the search field to close the search option.

To view or edit an existing predefined ruleset

• Double click on the Ruleset in the list

or

Select the Ruleset, click the handle at the bottom of the interface and choose 'Edit' from the options.

From here, you can modify a ruleset and, if desired, make changes to its 'Access Rights' and 'Protection Settings'. Any changes you make here are automatically rolled out to all applications that are currently applied with the ruleset.

To create a new predefined ruleset

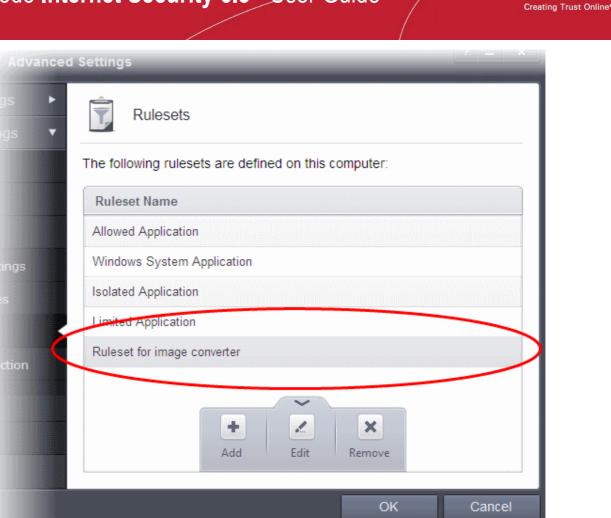

COMODO Creating Trust Online*

• Click up arrow at the bottom of the interface and choose 'Add' from the options.

- Enter a name for the new ruleset.
- To copy the Access Rights and Protection Settings from another pre-existing ruleset, click 'Copy From' and select the ruleset from the drop-down
- To customize the Access Rights and Protection Settings as per the requirements of this new rule set, follow the procedure explained in the section Use a Custom Ruleset.
- Click OK to save the new ruleset.

Once created, your ruleset is available for deployment onto specific application or file groups via the Active HIPS Rules interface.

6.2.2.4. Protected Objects

The Protected Objects panel allows you to protect specific files and folders, system critical registry keys and COM interfaces against access or modification by unauthorized processes and services.

The Protected Objects panel can be accessed by clicking Security Settings > Defense+ > HIPS > Protected Objects from the Advanced Settings interface.

сомодо

COMODO Advanced	Settings	? _	×

The panel has four tabs:

- · Protected Files Allows you to specify programs, applications and files that are to be protected from changes
- Blocked Files Allows you to specify programs, applications and files that are to be blocked from execution and opening
- Registry Keys Allows you to specify registry keys that are to be protected from changes
- COM Interfaces Allows you to specify COM interfaces that are to be protected from changes

6.2.2.4.1. Protected Files

The Protected Files tab displays a list of files and file groups that are protected from access by other programs, especially malicious programs such as virus, Trojans and spyware. It is also useful for safeguarding very valuable files (spreadsheets, databases, documents) by denying anyone and any program the ability to modify the file - avoiding the possibility of accidental or deliberate sabotage. If a file is 'Protected' it can still be accessed and read by users, but not altered. A good example of a file that ought to be protected is your 'hosts' file (c:\windows\system32\drivers\etc\hosts). Placing this in the 'Protected Files and Folders' area would allow web browsers to access and read from the file as per normal. However, should any process attempt to modify it then Comodo Internet Security blocks this attempt and produce a 'Protected File Access' pop-up alert.

	•					
				ОК		Cancel

- Add Allows you to add individual files, programs, applications to Protected Files.
- Edit Allows you to edit the path of the file or group of a selected item in the Protected Files interface.
- **Remove** Deletes the currently highlighted file or file group.
- Groups Opens the Manage Groups interface that allows you to edit pre-defined file groups and define new file groups for inclusion in Protected Files list
- Purge Runs a system check to verify that all the files listed are actually installed on the host machine at the path specified. If not, the file or the file group is removed, or 'purged', from the list.

COMODO Creating Trust Online

To manually add an individual file, folder, file group or process

• Click the handle from the bottom center and select 'Add'.

You can add the files by following methods:

- Selecting from File Groups
- Selecting from currently running Processes
- Browsing to the File
- Browsing to the Folder

To edit an item in the Protected Files list

Select the item from the list, click the handle from the bottom and select Edit. The 'Edit Property' dialog will appear.

COMODO Edit property	?	×
Edit File Path C:\Users\John Smith\Documents\accounts.odt		
ОК С	anc	el

• Edit the file path, if you have relocated the file and click OK

To delete an item from Protected Files list

• Select the item from the list, click the handle from the bottom and select 'Remove'.

The selected item will be deleted from the protected files list. CIS will not generate alerts, if the file or program is subjected to unauthorized access.

File Groups

File groups are handy, predefined groupings of one or more file types. Creating a file group allows you to quickly deploy a ruleset across multiple file types and applications.

To open the Manage File Groups interface

1. Click the handle from the bottom center of Protected Files interface and select 'Groups'.

The Manage File Groups interface will open.

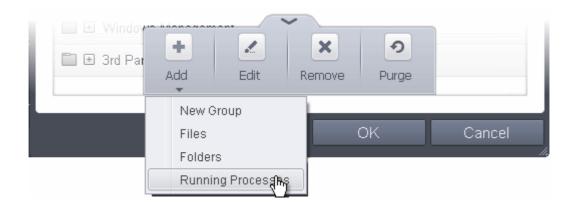

COMODO Manage File Groups	? 🗆 🗙

This interface allows you to

- Create a new File Group
- Edit the names of an Existing File Group
- Add a file to an existing file group
- Remove existing file group(s) or individual file(s) from existing group

Note: This area is for the creation and modification of file groups only. You are not able to modify the security ruleset of any applications or files from here. To do that, you should use the **HIPS Rules** interface or the **Predefined Rules** Interface.

To add a new group or add files to an existing group, click the handle from the bottom and click 'Add'.

Add a new group - Select 'New Group' from the 'Add' drop-down, enter a name for the group in the 'Edit property' dialog and click OK

COMODO Edit property		? X
Choose File Group Name Files from Alice		
	ОК	Cancel

- Add files to a group Select the Group, click the handle and select Add. Choose from 'Files', 'Folders' or 'Running Processes' to add files by browsing to the fle or folder or from currently running processes
- To edit an existing group, select the group, click the handle and choose Edit. Edit the name of the group in the Edit Property dialog
- To remove a group, select the group, click the handle and choose Remove.
- To remove an individual file from a group, click + at the left of the group to expand the group, select the file to be removed, click the handle and choose 'Remove'.

Exceptions

Users can choose to selectively allow another application (or file group) to modify a protected file by affording the appropriate Access Right in 'Active HIPS Rules' interface. A simplistic example would be the imaginary file 'Accounts.ods'. You would want the Open Office Calc program to be able to modify this file as you are working on it, but you would not want it to be accessed by a potential malicious program. You would first add the spreadsheet to the 'Protected Files' area. Once added to 'Protected Files', you would go into 'Active HIPS Rules' and create an exception for 'scalc' so that it alone could modify 'Accounts.ods'.

First add Accounts.odt to Protected Files area.

Protected Files **Blocked Files Registry Keys COM Interfaces** Path 🛅 🗉 Startup Folders 🛅 🗄 Important Files/Folders COMODO Files/Folders 🛅 🗄 Executables 🛅 🗉 Windows Management 🛅 🗉 3rd Party Protocol Drivers C:\Documents and Settings\Administrator\My Documents\accounts.ods × Ъ Ð ÷. 1 Add Edit Remove Groups Purge

 Then go to HIPS Rules interface and add it to the list of applications. Click the handle at the bottom and choose 'Edit' after selecting the checkbox beside it.

	Application	Treat As
	Windows System Applications	Windows System Applicati
	🗂 %windir%\explorer.exe	Windows System Applicati

- Under the 'Access Rights' tab, click the link 'Modify' beside the entry Protected Files/Folders. The Protected Files and Folders interface will appear.
- Under the 'Allowed Files/Folders' tab, click the handle, choose 'Add' > 'Files' and add scalc.exe as exceptions to the 'Ask' or 'Block' rule in the 'Access Rights'.

COMODO Creating Trust Online*

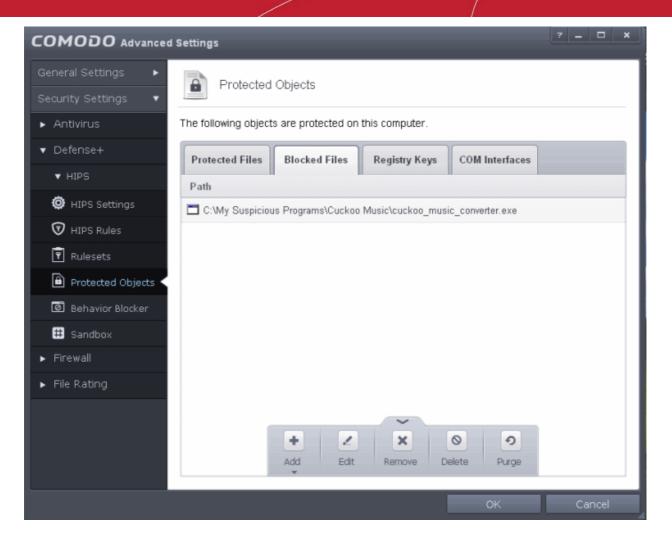

Another example of where protected files should be given selective access is the Windows system directory at 'c:\windows\system32'. Files in this folder should be off-limits to modification by anything except certain, Trusted, applications like Windows Updater Applications. In this case, you would add the directory c:\windows\system32* to the 'Protected Files area (* = all files in this directory). Next go to '**HIPS Rules**', locate the file group 'Windows Updater Applications' in the list and follow the same process outlined above to create an exception for that group of executables.

6.2.2.4.2. Blocked Files

Defense+ allows you to lock-down files and folders by completely denying all access rights to them from other processes or users - effectively cutting it off from the rest of your system. If the file you block is an executable, then neither you nor anything else is able to run that program. Unlike files that are placed in 'Protected Files', users cannot selectively allow any process access to a blocked file.

Clicking the handle at the bottom of the interface opens an options panel with the following options:

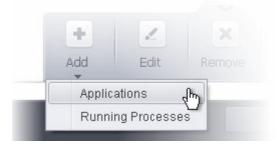

- Add Allows you to add individual files, programs, applications to Blocked Files.
- Edit Allows you to edit the path of the file.
- Remove Releases the currently highlighted file from the blocked files list.
- Delete Deletes the highlighted file from your computer
- Purge Runs a system check to verify that all the files listed are actually installed on the host machine at the path specified. If not, the file or the file group is removed, or 'purged', from the list.

COMODO Creating Trust Online*

To manually add an individual file or application

Click the handle from the bottom center and select 'Add'.

You can add the files by following methods:

- Selecting from currently running Processes
- Browsing to File

To edit an item in the Blocked Files list

Select the item from the list, click the handle from the bottom and select Edit. The 'Edit Property' dialog will appear.

COMODO Edit property	?	×	
Edit File Path C:\My Suspicious Programs\Cuckoo Music\cuckoo_music_converter.et	xe		
ок с	anc	el	

• Edit the file path, if you have relocated the file and click OK

To release an item from Blocked Files list

Select the item from the list, click the handle from the bottom and select 'Remove'.

The selected item will be removed from the Blocked Files list. CIS will not block the application or file from execution or opening then onwards.

To permanently delete a blocked file from your system

• Select the item from the list, click the up arrow from the bottom and select 'Delete'.

The selected item will be deleted from your computer immediately.

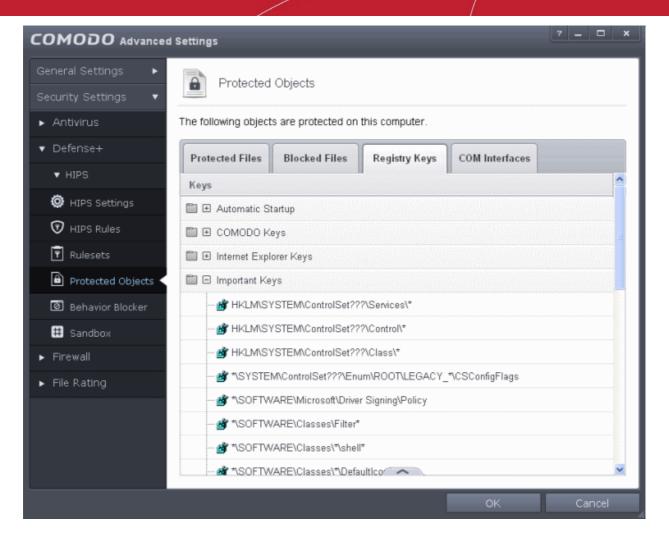

Warning: Deleting a file from from the Blocked Files interface permanently deletes the file from your system, rendering it inaccessible in future and it cannot be undone. Ensure that you have selected the correct file to be deleted before clicking 'Delete'.

6.2.2.4.3. Protected Registry Keys

The 'Registry Protection' panel allows you to protect system critical registry keys against modification. Irreversible damage can be caused to your system if important registry keys are corrupted or modified in any way. It is essential that your registry keys are protected against any type of attack.

Click the 'Registry Keys' tab in the Protected Objects interface.

COMODO Creating Trust Online*

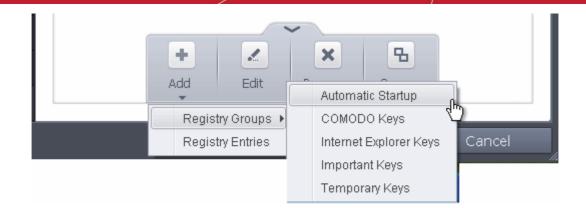

Clicking the handle at the bottom of the interface opens an options panel with the following options:

*\SOF7		181 ~		
	+	2	×	8
*\SOF	Add	Edit F	Remove	Groups
*\SOF	*	Luit	Centove	Groups

- Add Allows you to add Registry groups or individual registry keys/entries to Registry Protection list.
- Edit Allows you to edit the path of the Registry group or individual registry keys/entries of the selected item in the Registry Protection interface.
- Remove Deletes the currently highlighted Registry group or individual registry key from the Registry Protection list.
- Groups Opens the Manage Registry Groups interface that allows you to edit pre-defined Registry groups and define new Registry groups for inclusion in Registry Protection list.

To manually add an individual Registry key or Registry Group

Click the handle from the bottom center and select 'Add'.

You can add the items by following methods:

- Adding Registry Groups Selecting Registry Groups allows you to batch select and import predefined groups of important registry keys. Comodo Internet Security provides a default selection of 'Automatic Startup' (keys), 'Comodo Keys', 'Internet Explorer Keys' and 'Important Keys'. For explanations on editing existing registry groups and creating new groups refer to the section Registry Groups.
- Adding individual Registry Keys Selecting 'Registry Entries' opens the 'Select Registry Keys'.

6.2.2.4.4. Protected COM interfaces

Component Object Model (COM) is Microsoft's object-oriented programming model that defines how objects interact within a single application or between applications - specifying how components work together and inter-operate. COM is used as the basis for Active X and OLE - two favorite targets of hackers and malicious programs to launch attacks on your computer. It is a critical part of any security system to restrict processes from accessing the Component Object Model - in other words, to protect the COM interfaces.

Comodo Internet Security automatically protects COM interfaces against against modification, corruption and manipulation by malicious processes. The predefined **COM Interface groups** can be accessed by clicking the 'Groups...' button.

The 'COM Interface' allows you to view the list of predefined **COM Interface groups** protected by CIS, edit them and to add new COM interface components to the list. This interface can be accessed by clicking the 'COM Interfaces' tab in the Protected Objects interface.

6.2.2.5. Behavior Blocker

The Behavior Blocker is an integral part of the Defense+ engine and is responsible for authenticating every executable image that is loaded into the memory. The Behavior Blocker intercepts all files before they are loaded into memory and intercepts prefetching/caching attempts for those files. It calculates the hash of the executable at the point it attempts to load into the memory. It then compares this hash with the list of known / recognized applications that are on the Comodo safe list. If the hash matches the one on record for the executable, then the application is safe and the Behavior Blocker allows it to run. If no matching hash is found on the safelist, then the executable is 'unrecognized' and is run inside the auto-sandbox. You will be notified via an alert when this happens.

COMODO Creating Trust Online*

The 'Behavior Blocker' configuration panel can be accessed by clicking 'Tasks > Advanced Tasks > Open Advanced Settings > Security Settings > Defense + > Behavior Blocker'. This panel allows you to quickly determine how proactive the Behavior Blocker should be and which types of files it should check.

Auto-sandbox unknown applications as - Allows you to enable or disable the Behavior Blocker. If enabled, the
Behavior Blocker runs unrecognized applications inside the auto-sandbox with the access restriction as selected in the
drop down menu. (*Default = 'Enabled' with 'Partially Limited'*)

Note: The Behavior Blocker configuration setting can also be set in the 'Advanced View' of the 'Home' screen beside the Auto-Sandbox status link in the 'Defense+ and Sandbox' pane.

Note: The 'auto-sandbox' referred to here is distinct from the Virtual Kiosk discussed in **Sandbox Tasks**. For the most part, the 'auto-sandbox' is a non-virtual environment under which unrecognized applications are allowed to run under a set of strict access restrictions (default='Partially Limited'). These restrictions prevent the application from taking actions that are damaging to your system. Users can, however, enable 'Full Virtualization' of auto-sandboxed files in the Behavior Blocker settings.

Configuring Access Restriction

The Behavior Blocker will auto-sandbox an unknown executable and restrict its execution privileges according to an access restriction level set by you. Access restriction levels determine what level of rights a sandboxed application has to access other software and hardware resources on your computer:

- Partially Limited The application is allowed to access all operating system files and resources like the clipboard. Modification of protected files/registry keys is not allowed. Privileged operations like loading drivers or debugging other applications are also not allowed.(*Default*)
- Limited Only selected operating system resources can be accessed by the application. The application is
 not allowed to execute more than 10 processes at a time and is run without Administrator account privileges.
- Restricted The application is allowed to access very few operating system resources. The application is
 not allowed to execute more than 10 processes at a time and is run with very limited access rights. Some
 applications, like computer games, may not work properly under this setting.
- Untrusted The application is not allowed to access any operating system resources. The application is not
 allowed to execute more than 10 processes at a time and is run with very limited access rights. Some
 applications that require user interaction may not work properly under this setting.
- **Blocked** The application is not allowed to run at all.
- **Fully Virtualized** The application will be run in a virtual environment completely isolated from your operating system and files on the rest of your computer.
- Detect programs which require elevated privileges: Allows you to instruct the Behavior Blocker to display alerts
 when an installer or updater requires administrator or elevated privileges to run. An installer that is allowed to run with
 elevated privileges is permitted to make changes to important areas of your computer such as the registry. Refer to the
 section Understanding Security Alerts for more details.

сомо	DDO Behavior Blocker
	CuckooSetup.exe could not be recognized and requests unlimited access to your computer
Ö	CuckooSetup.exe Unidentified Publisher
	Run Isolated(Default) Runs the application with limited access rights
	Allow Grants unlimited access to the application above
	Block Stops execution of the application above
🔲 Trust th	is application

You can decide on whether or not to allow the installer or update based on your assessment, from the alert itself. (*Default=Enabled*)

- Show privilege elevation alerts for unknown programs : Allows you to instruct the Behavior Blocker to display
 alerts when a new or unrecognized program, application or executable requires administrator or elevated privileges to
 run. You can decide on whether or not to allow the the unknown application based on your assessment, from the alert
 itself. (*Default=Enabled*)
- Define exceptions for behavior blocking Allows you to add certain file paths for being excluded from monitoring by the Behavior Blocker. The executables included in the exceptions area are allowed to run without checking of authenticity. (Default = Disabled)

Note: The files added through this interface will be exempted only from monitoring by Behavior Blocker. To exclude a file from monitoring by all the components of CIS including Antivirus, Firewall, HIPS and Behavior Blocker, add it to **Trusted Files** list.

To define exceptions

Select the 'Define exceptions for behavior blocking' checkbox and click the <u>Exceptions</u> link. The 'Manage Exceptions' dialog will appear.

СОМОДО Мапа	ge Exceptions	? 🗆 🗙
Path	ns\Peacock_Image_Edito	or.exe
	+ O Add Remove File Groups + Files Folders Running Processes	Executables All Applications Important Files/Folders Web Browser Data Folders Windows Updater Applications Windows System Applications Temporary Files COMODO Files/Folders COMODO Internet Security Startup Folders Windows Management 3rd Party Protocol Drivers

- Click the handle at the bottom of the interface and choose 'Add'
- You can add items by selecting the required option from the drop-down:
 - File Groups Enables you to select a category of pre-set files or folders. For example, selecting
 'Executables' would enable you to create a ruleset for all files with the extensions .exe .dll .sys .ocx .bat
 .pif .scr .cpl . Other such categories available include 'Windows System Applications', 'Windows
 Updater Applications', 'Start Up Folders' etc. For more details on file groups, refer to the section File
 Groups.
 - Running Processes As the name suggests, this option allows you to select an application or executable from the processes that are currently running on your PC.
 - Browse Folders Opens the 'Browse for Folders' window and enables you to navigate to the folder you wish to add.
 - Browse File Opens the 'Open' window and enables you to navigate to the application or file you wish

to add.

Click 'OK' to implement your settings.

Advanced Settings:

Do heuristic command-line analysis for certain applications - Selecting this option instructs Comodo Internet Security to perform heuristic analysis of programs that are capable of executing code such as visual basic scripts and java applications. Example programs that are affected by enabling this option are wscript.exe, cmd.exe, java.exe and javaw.exe. For example, the program wscipt.exe can be made to execute visual basic scripts (.vbs file extension) via a command similar to 'wscript.exe c:\tests\test.vbs'. If this option is selected, CIS detects c:\tests\test.vbs from the command-line and applies all security checks based on this file. If test.vbs attempts to connect to the Internet, for example, the alert will state 'test.vbs' is attempting to connect to the Internet (Default = Enabled).

If this option is disabled, the alert would only state 'wscript.exe' is trying to connect to the Internet'.

Background note: 'Heuristics' describes the method of analyzing a file to ascertain whether it contains codes typical of a virus. Heuristics is about detecting virus-like behavior or attributes rather than looking for a precise virus signature that matches a signature on the virus blacklist. This helps to identify previously unknown (new) viruses.

Detect shellcode injections (i.e. Buffer overflow protection) - Enabling this setting turns-on the Buffer over flow protection.

Background: A buffer overflow is an anomalous condition where a process/executable attempts to store data beyond the boundaries of a fixed-length buffer. The result is that the extra data overwrites adjacent memory locations. The overwritten data may include other buffers, variables and program flow data and may cause a process to crash or produce incorrect results. They can be triggered by inputs specifically designed to execute malicious code or to make the program operate in an unintended way. As such, buffer overflows cause many software vulnerabilities and form the basis of many exploits.

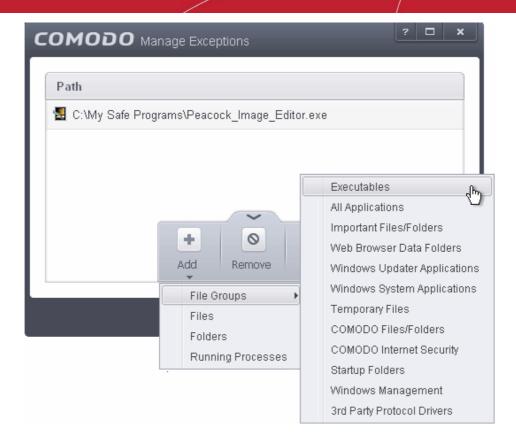

Turning-on buffer overflow protection instructs the Comodo Internet Security to raise pop-up alerts in every event of a possible buffer overflow attack. You can allow or deny the requested activity raised by the process under execution depending on the reliability of the software and its vendor. **Click here** for more details on the alerts.

Comodo recommends that this setting to be maintained selected always (Default = Enabled).

To exclude some of the file types from being monitored under Detect Shellcode injections.

Select the 'Detect shellcode injections' checkbox and click the <u>Exceptions</u> link. The 'Manage Exceptions' dialog will appear.

COMODO Creating Trust Online

- · Click the handle from the bottom of the interface and choose 'Add'
- You can add items by selecting the required option from the drop-down:
 - File Groups Enables you to select a category of pre-set files or folders. For example, selecting 'Executables' would enable you to create a ruleset for all files with the extensions .exe .dll .sys .ocx .bat .pif .scr .cpl . Other such categories available include 'Windows System Applications', 'Windows Updater Applications', 'Start Up Folders' etc. For more details on file groups, refer to the section File Groups.
 - Running Processes As the name suggests, this option allows you to select an application or executable from the processes that are currently running on your PC.
 - Browse Folders Opens the 'Browse for Folders' window and enables you to navigate to the folder you wish to add.
 - Browse File Opens the 'Open' window and enables you to navigate to the application or file you wish to add.

Note: These settings are recommended for advanced users only.

Click 'OK' to implement your settings.

6.2.2.5.1. The Sandbox - An Overview

Comodo Internet Security's new sandbox is an isolated operating environment for unknown and untrusted applications. Running an application in the sandbox means that it cannot make permanent changes to other processes, programs or data on your 'real' system. Comodo have integrated sand-boxing technology directly into the security architecture of Comodo Internet Security to complement and strengthen the Firewall, Defense+ and Antivirus modules.

Applications in the sandbox are executed under a carefully selected set of privileges and write to a virtual file system and registry instead of the real system. This delivers the smoothest user experience possible by allowing unknown applications to run and operate as they normally would while denying them the potential to cause lasting damage.

After an unknown application has been placed in the sandbox, CIS also automatically queues it for submission to Comodo Cloud Scanners for automatic behavior analysis. Firstly, the files undergo another antivirus scan on our servers. If the scan discovers the file to be malicious, then it is designated as malware, the result is sent back to the local installation of CIS and the local black-list is updated. If the scan does not detect that the file is malicious then its behavior will be monitored by running it in a virtual environment within Comodo's Instant Malware Analysis (CIMA) servers and all its activities are recorded. If these

behaviors are found to be malicious then the signature of the executable is automatically added to the antivirus black list. If no malicious behavior is recorded then the file is placed into 'Unrecognized Files' (for execution within the sandbox) and will be submitted to our technicians for further checks. The cloud scanning processes take around 15 minutes to complete and report their results back to CIS.

By uniquely deploying 'sandboxing as security', CIS 2013 offers improved security, fewer pop-ups and greater ease of use than ever before.

6.2.2.5.2. Unknown Files: The Auto-Sandboxing and Scanning Processes

- When an executable is first run it passes through the following CIS security inspections:
 - Antivirus scan
 - HIPS Heuristic check
 - Buffer Overflow check
- If the processes above determine that the file is malware then the user is alerted and the file is quarantined or deleted
- An application can become recognized as 'safe' by CIS (and therefore not auto-sandboxed or scanned in the cloud) in the following ways:
 - · Because it is on the local Comodo White List of known safe applications
 - Because the user has added the application to the local 'Trusted Files'
 - By the user granting the installer elevated privileges (CIS detects if an executable requires administrative privileges. If it does, it asks the user. If they choose to trust, CIS regards the installer and all files generated by the installer as safe)
 - Additionally, a file is not auto-sandboxed or sent for analysis in the cloud if it is defined as an Installer or Updater in HIPS Ruleset (See Active HIPS Rules for more details)
 - Cloud Scanning Part 1

Files and processes that pass the security inspections above but are not yet recognized as 'safe' (whitelisted) are 'Unrecognized' files. In order to try to establish whether a file is safe or not, CIS will first consult Comodo's File Look-Up Server (FLS) to check the very latest signature databases:

- A digital hash of the unrecognized process or file is created.
- These hashes are uploaded to the FLS to check whether the signature of the file is present on the latest databases. This database contains the latest, global black list of the signatures of all known malware and a white list of the signatures of the 'safe' files.
 - First, our servers check these hashes against the latest available black-list
 - If the hash is discovered on this blacklist then it is malware
 - The result is sent back to the local installation of CIS
- If the hash is not on the latest black-list, it's signature is checked against the latest white-list
 - If the hash is discovered on this white-list then it is trusted
 - The result is sent back to local installation of CIS
 - The local white-list is updated
- The FLS checks detailed above are near instantaneous.

Sandbox and Cloud Scanning Part 2

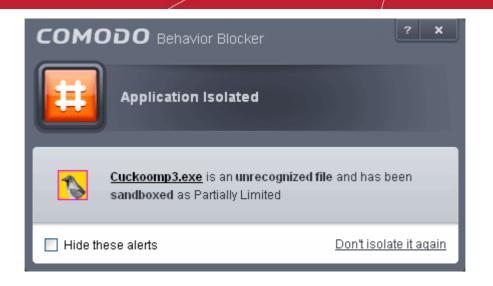

If the hash is not on the latest black-list or white-list then it remains as 'unrecognized'. CIS simultaneously takes two distinct but complementary actions -

(1) It will run the unrecognized file in the auto-sandbox so that it cannot access important operating system files or damage your computer

(2) It will leverage Comodo's Cloud Scanning technology to determine whether the file behaves in a malicious fashion.

Unrecognized files and applications will be isolated and run in the auto-sandbox. CIS will alert the user that it
is going to run the application in the sandbox.

COMODO Creating Trust Online*

• By default, auto-sandboxed applications are run with 'Partially Limited' restrictions.

More detail: Auto-sandboxed applications are allowed to run under a specific set of conditions or privileges. In CIS, these are known as 'Restriction Levels'. In part, auto-sandbox restriction levels are implemented by enforcing or relaxing the native access rights that Windows can grant to an application. There are six levels -Partially Limited, Limited, Restricted, Untrusted, Blocked and Fully Virtualized. 'Partially Limited' is the default restriction level for auto-sandboxed applications, but you can change this to a different level in the Behavior Blocker Settings panel:

- Partially Limited The application is allowed to access all operating system files and resources like the clipboard. Modification of protected files/registry keys is not allowed. Privileged operations like loading drivers or debugging other applications are also not allowed. (Default)
- Limited Only selected operating system resources can be accessed by the application. The
 application is not allowed to execute more than 10 processes at a time and is run without Administrator
 account privileges.
- Restricted The application is allowed to access very few operating system resources. The application
 is not allowed to execute more than 10 processes at a time and is run with very limited access rights.
 Some applications, like computer games, may not work properly under this setting.
- Untrusted The application is not allowed to access any operating system resources. The application is
 not allowed to execute more than 10 processes at a time and is run with very limited access rights.
 Some applications that require user interaction may not work properly under this setting.
- Blocked The application is not allowed to run at all.
- Fully Virtualized The application will be run in a virtual environment completely isolated from your
 operating system and files on the rest of your computer.
- Unrecognized files are simultaneously uploaded to Comodo's Instant Malware Analysis servers for further checks:
 - Firstly, the files undergo another antivirus scan on our servers.
 - If the scan discovers the file to be malicious (for example, heuristics discover it is a brand new variant) then it is designated as malware. This result is sent back to the local installation of CIS and the local and global black-list is updated.
 - If the scan does not detect that the file is malicious then it passes onto the the next stage of inspection behavior monitoring.
 - The behavior analysis system is a cloud based service that is used to help determine whether a file
 exhibits malicious behavior. Once submitted to the system, the unknown executable will be
 automatically run in a virtual environment and all actions that it takes will be monitored. For example,
 processes spawned, files and registry key modifications, host state changes and network activity will be
 recorded.
 - If these behaviors are found to be malicious then the signature of the executable is automatically added to the antivirus black list.
 - If no malicious behavior is recorded then the file is placed into 'Unrecognized Files' and will be submitted to our technicians for further checks. Note: Behavior Analysis can identify malicious files and

add to the global black list, but it cannot declare that a file is 'safe'. The status of 'safe' can only be given to a file after more in-depth checks by our technicians.

In either case, the result is reported back to your CIS installation in approximately 15 minutes. If the
executable was not found to be malicious then it will be run in the auto-sandbox. It will simultaneously
be added to the 'Unrecognized Files' list and uploaded to our technicians for analysis. If it is discovered
to be a threat then CIS will show an AV alert to the user. From this alert the user can opt to quarantine,
clean (delete) or disinfect the malicious file. This new threat will be automatically added to the global
black list database and therefore benefit all CIS users.

6.2.2.6. Configure the Sandbox

The 'Sandbox' section of 'Advanced Settings' allows you to view, manage and add applications which should always be run inside the sandbox. A sandboxed application has much less opportunity to damage your computer because it is run in a virtual environment isolated from your operating system and your files. This allows you to safely run applications that you are not 100% sure about. When adding a new application, you can also set that particular application's 'restriction level' (this determines the degree of access that the application has to your 'real' system) and the amount of resources it should be allowed to consume. If you do not select a restriction level then it will run as 'Fully Virtualized'.

The 'Sandbox' area allows you to configure settings that apply to all sandboxed programs. Other sandbox-related options include the ability to password protect the Virtual Kiosk. For easy identification, Comodo Internet Security will show a green border around programs that are running in the sandbox.

 The 'Sandbox' panel can be accessed by clicking 'Tasks > Sandbox Tasks > Open Advanced Settings > Security Settings > Defense+ > Sandbox

COMODO Advanced	d Settings	? - ×

Click the following links to find out more about each section:

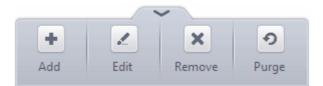

• Sandboxed Programs - Add and configure programs that should always run sandboxed

- Shared Space Settings Files downloaded or generated by sandboxed applications that you wish to be able to
 access from your real system should be downloaded to tshared space
- Virtual Kiosk Settings Create an 'exit' password for the kiosk. If set, the Kiosk cannot be closed or minimized until the correct password is entered. This prevents guests or younger users from exiting this sandbox environment.

Sandboxed Programs

The upper pane lists all programs that you have added to sandbox along with their installation paths and their access restriction level. Because the sandbox is isolated from your operating system, any programs that are known to be problematic or to cause conflicts with other software can be safely run in the sandbox.

Clicking the handle at the bottom of the pane opens the sandbox tools panel:

- Add Allows you to add programs that should be run in the sandbox in future.
- Edit Allows you to edit sandbox options for a selected program in the list.
- Remove Releases the currently selected program from the sandbox
- **Purge** Checks that all files listed are actually installed on your computer at the path specified. If not, the file or the file group is removed (purged) from the list.

Note: Programs added to this list will always be executed inside the sandbox. If you want to run an application in the sandbox on a 'one off' basis instead, you can do it in two ways:

· Right click on the program or file to be opened from the Windows Explorer and select 'Run in Comodo Sandbox'

or

• Flip the 'Scan objects' pane in the CIS Home screen to show 'Sandbox Objects' and drag and drop the program or file from Windows Explorer to the pane

To manually add a program to Sandbox

• Click the handle at the bottom and select 'Add':

The 'Manage Sandboxed Program' interface will open:

COMODO Creating Trust Online*

COMODO Manage Sandboxed Program	? X
Program Path:	Browse -
Settings	Running Processes
Set Restriction Level Partially Limited	
 Fully virtualized application will not be restricted by the operating system but itself 	by the Sandbox
Limit maximum memory consumption to	
Limit program execution time to	
ОК	Cancel

To add a program, you can manually enter the path to the executable or click 'Browse' to add the program by choosing:

- Files Allows you to navigate to the executable of the program you wish to add.
- Running Processes Allows you to add a program to the sandbox by choosing a running process. Note, adding a
 process to the sandbox will also run it's parent processes in the sandbox.

Settings:

- Set Restriction Level The Access restriction level determines the amount of privileges a sandboxed application has
 to access other software and hardware resources on your computer. (*Default = Disabled*)
- Set an access restriction level by enabling the 'Set Restriction Level' check-box and choosing a level from the drop-down.
- If you do not set a restriction level, CIS will automatically apply a level of 'Fully Virtualized'.

Settings	
Set Restriction Level	Untrusted 🔹
	Untrusted Jhn
 The Sandbox applies 	Restricted
 The sandboxed proce 	
 The sandboxed proce 	Partially Limited
 The sandboxed proce 	

- Fully Virtualized The application will be run in a virtual environment completely isolated from your operating system and files on the rest of your computer.
- Untrusted The application is not allowed to access any operating system resources. The application is not
 allowed to execute more than 10 processes at a time and is run with very limited access rights. Please note,
 some applications that require user interaction may not work properly under this setting.
- Restricted The application is allowed to access very few operating system resources. The application is
 not allowed to execute more than 10 processes at a time and is run with very limited access rights. Please
 note, applications like computer games may not work properly under this setting.
- Limited Only selected operating system resources can be accessed by the application. The application is
 not allowed to execute more than 10 processes at a time and is not allowed to execute actions that require

Administrator account privileges. Access to many system resources, like the clipboard, are also prohibited.

- Partially Limited (*Default*)- The application is allowed to access all operating system files and resources like the clipboard. Modification of protected files/registry keys is not allowed. Privileged operations like loading drivers or debugging other applications are also not allowed.
- Limit maximum memory consumption to: You can define how much system memory can be allocated to the application by selecting this check-box then entering the desired memory (in MB) in the combo box beside it (*Default* = *Disabled*).
- Limit the program execution time to: You can define how long the program is allowed to run by selecting this checkbox then entering the time (in seconds). The program will be terminated after this time has elapsed. (*Default* = *Disabled*).
- Click OK to add the program to the list of sandboxed programs. From this point onwards the application will be run in the sandbox.
- If you wish to remove it at a later date, simply select it in the list and click 'Remove'. Next time you execute this
 application it will run outside of the sandbox (presuming it is not then detected as malicious or automatically
 sandboxed as per the sandboxing process).
- To edit the restriction settings for an application included in the sandbox, select the application and click 'Edit'. The
 process is same as explained in adding a program to sandbox.

Shared Space Settings:

'Shared Space' is a dedicated area on your local drive that sandboxed applications are permitted to write to and which can also be accessed by non-sandboxed applications (hence the term 'Shared Space'). For example, any files or programs you download via a sandboxed browser that you wish to be able to access from your real system should be downloaded to the shared space. This folder is also used by the Virtual Kiosk and is located by default at 'C:/Program Data/Shared Space'.

You can access the shared space folder in the following ways:

- Clicking the 'Shared Space' shortcut on your computer desktop
- Clicking 'Shared Space' button on the CIS interface
- Opening 'Sandbox Tasks' from the Tasks interface then clicking 'Open Shared Space'
- By default, sandboxed applications can access folders and files on your 'real' system but cannot save any changes to them. However, you can define exceptions to this rule by using the 'Do not virtualize access to...' links.

To define exceptions for files and folders

- Enable the 'Do not virtualize access to the specified files/folders' check-box then click on the words the specified files/folders. The 'Manage Exceptions' dialog will appear.
 - Click the handle at the bottom to open the tools menu then click 'Add.

Files - Allows you to specify files or applications that sandboxed applications are able to access Folders - Specify a folder that can be accessed by sandboxed applications File Groups - Enables you to choose a category of files or folders to which access should be granted. For example, selecting 'Executables' would enable you to create an exception for all files with the extensions .exe .dll .sys .ocx .bat .pif .scr .cpl. For more details on file groups, refer to the section File Groups.

- To edit an exception, select it from the list, click the handle to open the tools menu then select 'Edit'.
 - Change file or folder location path and click 'OK'
 - Click 'OK' to implement your settings
 - To manage available file groups, click the 'Groups' button from the tools menu. The 'Manage File Groups' dialog allows you to view, add and edit file groups. Please refer to File Groups if you need more information with this area.

To define exceptions for specific Registry keys and values

- Enable the 'Do not virtualize access to the specified registry keys/values' check-box then click on the words the specified registry keys/values. The 'Manage Exceptions' dialog will appear.
 - Click the handle at the bottom to open the tools menu then click 'Add'.
 - **Registry Groups** Allows you to batch select a predefined group of important registry keys as exceptions. For an explanation of CIS registry groups, refer to the section **Registry Groups**.
 - Registry Entries Opens an interface that allows you to quickly browse Windows registry keys and add them as exceptions:

Add new item:	eys	Peacock_Image_Editor	×
Google Microsoft MozillaPlugins OpenOffice.org Opera Software Peacock_Image_Editor Indicise Im Im Modeling	•	ОК Сапсе	

- Click 'OK' to implement your settings.
- To edit an exception, first select it from the list, click the handle to open the tools menu then select 'Edit'.

• Edit the key path and click OK.		
COMODO Edit property		? X
Edit Registry Key HKLM\SOFTWARE\Peacock Image Editor*		
	ОК	Cancel

To view and manage Registry Groups, click the handle at the bottom and select 'Groups'. From here you can
add/remove registry groups, rename a groups and add/remove individual keys to/from a group. Note - any changes
you make here are not limited to registry group 'exceptions', they apply to registry groups overall. Refer to the section
Registry Groups for more details on managing registry groups.

Other Settings:

• Enable automatic startup for services installed in the sandbox - By default, CIS does not permit sandboxed

services to run at Windows startup. Select this check-box to allow them to do so. (Default = Disabled)

Show highlight frame for virtualized programs - If enabled, CIS displays a green border around the windows of programs that are running inside the sandbox. The following example shows an .odt document opened with a sandboxed version OpenOffice Writer:

🖀 Devious Diesel - Friend of Thomas.odt - OpenOffice.org Writer

Devious Diesel – Friend of Thomas
A diesel locomotive is a type of railroad locomotive in which the prime mover is a diesel engine, a reciprocating engine operating on the Diesel cycle as invented by Dr. Rudolf Diesel. Several types of diesel locomotive have been developed, the principal distinction being in the means by which the prin mover's mechanical power is conveyed to the driving wheels (drivers).
Overview Early internal combustion engine-powered locomotives used gasoline as their fuel. Soon after Dr. Rudolf Diesel patented his first compression ignition engine in 1892,[1] its application for railway propulsion was considered. Progress was slow, however, because of the poor power-to-weight ratio of the early engines, as well as the difficulty inherent in mechanically applying power to multiple driving wheels on swiveling trucks (bogies)
Page 1 / 13 Default English (USA) INSRT STD *

Virtual Kiosk Settings

The Virtual Kiosk Settings area allows you to password protect your Virtual Kiosk. Once set, the password has to be entered every time when the Virtual Kiosk is closed.

The exit password for Virtual Kiosk acts as a security measure to prevent guest users or younger users from exiting out of the isolated environment you have prepared for them and potentially exposing the real system to danger.

To set an exit password for Virtual Kiosk:

Select the 'Protect Virtual Kiosk with a password' check-box then click the words password. The 'Change password' dialog will appear.

сомор	O Change password	? X
💻 Cha	nge password	
Password:	•••••	
Retype:	•••••	
	ОК	Cancel

- Type a password which contains a combination of alphabetic and numeric characters and symbols which cannot be easily guessed by others. We recommend a password of at least 8 character in length.
- Re-enter the password in the 'Retype' field then click 'OK'.

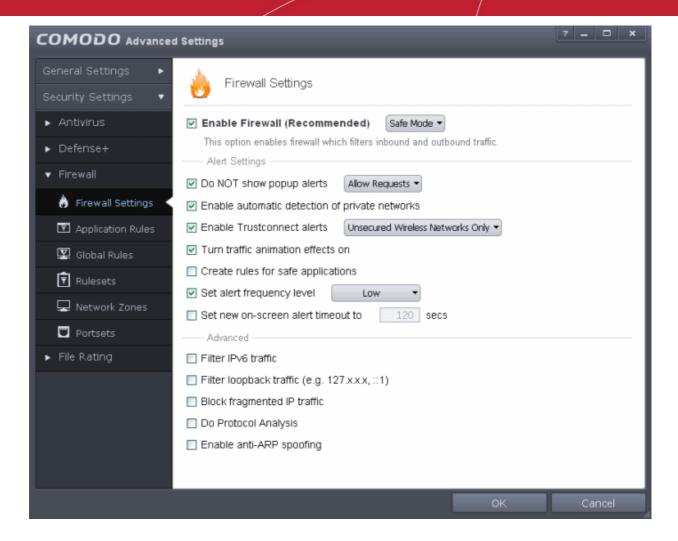

You will now be asked for a password every time you exit the Virtual Kiosk.

6.2.3. Firewall Settings

.

The Firewall component of Comodo Internet Security offers the highest levels of security against inbound and outbound threats. It checks that all network traffic in and out of your computer is legitimate, it stealths your computer's ports against hackers and it blocks malicious software from transmitting your confidential data over the Internet. Comodo Firewall also makes it easy for you to specify exactly which applications are allowed to connect to the Internet and immediately warns you when there is suspicious activity.

COMODO Creating Trust Online*

The 'Firewall Settings' area has several sub-sections that allow you to configure overall behavior; configure network zones and portsets and (for advanced users) to configure and deploy traffic filtering rules on an application specific and global basis.

Click the following links to jump to the section you need help with:

- Firewall Behavior Settings Configure settings that govern the overall behavior of the firewall component.
- Application Rules View, create and modify rules that determine the network access privileges of individual
 applications or specific types of application
- Global Rules View, create and modify rules that apply to all traffic flowing in and out of your computer.
- Rule Sets Predefined collections of firewall rules that can be applied, out-of-the-box, to Internet capable applications such as browsers, email clients and FTP clients.
- Network Zones A network zone is a named grouping of one or more IP addresses. Once created, you can specify a zone as the target of firewall rule.
- Portsets Predefined groups of regularly used ports that can used and reused when creating traffic filtering rules.

Background note on rules: Both application rules and global rules are consulted when the firewall is determining whether or not to allow or block a connection attempt.

- For Outgoing connection attempts, the application rules are consulted first then the global rules.

- For Incoming connection attempts, the global rules are consulted first then application specific rules.

6.2.3.1. Firewall Behavior Settings

Firewall Settings panel allows you to quickly configure overall Firewall settings and is divided into three main areas:

- General Settings
- Alert Settings

General Settings

• Enable Firewall - Allows you to enable or disable Firewall protection.(Default and recommended = Enabled)

Note: The Firewall configuration settings can also be modified in the 'Advanced View' of the Home screen by clicking the status link beside Firewall in the Firewall pane.

If enabled, you can also choose the security level from the accompanying drop-down menu:

ngs 🔻	Firewall Settings
	Enable Firewall (Recommended) Safe Mode ▼ This option enables firewall which filters i Block All Alert Settings Custom Ruleset Safe Mode Safe Mode Training Mode Training Mode

The choices available are:

 Block All: The firewall blocks all traffic in and out of your computer regardless of any user-defined configuration and rules. The firewall does not attempt to learn the behavior of any application and does not automatically create traffic rules for any applications. Choosing this option effectively prevents your computer from accessing any networks, including the Internet.

Custom Ruleset Mode: The firewall applies ONLY the custom security configurations and network traffic rules
specified by the user. New users may want to think of this as the 'Do Not Learn' setting because the firewall does not
attempt to learn the behavior of any applications. Nor does it automatically create network traffic rules for those
applications. You will receive alerts every time there is a connection attempt by an application - even for applications
on the Comodo Safe list (unless, of course, you have specified rules and policies that instruct the firewall to trust the
application's connection attempt).

If any application tries to make a connection to the outside, the firewall audits all the loaded components and checks each against the list of components already allowed or blocked. If a component is found to be blocked, the entire application is denied Internet access and an alert is generated. This setting is advised for experienced firewall users that wish to maximize the visibility and control over traffic in and out of their computer.

Safe Mode (Default): While filtering network traffic, the firewall automatically creates rules that allow all traffic for the components of applications certified as 'Safe' by Comodo, if the checkbox Create rules for safe applications is selected. For non-certified new applications, you will receive an alert whenever that application attempts to access the network. Should you choose, you can grant that application Internet access by choosing 'Treat this application as a Trusted Application' at the alert. This deploys the predefined firewall ruleset 'Trusted Application' onto the application.

'Safe Mode' is the recommended setting for most users - combining the highest levels of security with an easy-tomanage number of connection alerts.

 Training Mode : The firewall monitors network traffic and create automatic allow rules for all new applications until the security level is adjusted. You will not receive any alerts in 'Training Mode' mode. If you choose the 'Training Mode' setting, we advise that you are 100% sure that all applications installed on your computer are assigned the correct network access rights.

Alert Settings

 Do NOT show popup alerts - Configure whether or not you want to be notified when the firewall encounters a request for network access. Choosing 'Do NOT show popup alerts' will minimize disturbances but at some loss of user awareness. (*Default = Enabled*)

If you choose not to show alerts then you have a choice of default responses that CIS should automatically take - either 'Block Requests' or 'Allow Requests'.

	This option enables firewall which filters inbound and outbound traffic.
	Alert Settings
	☑ Do NOT show popup alerts Allow Requests ▼
ttings	Enable automatic detection of Block Requests is
Rules	Enable Trustconnect alerts Unsecured Wireless Networks Only

 Enable automatic detection of private networks - Instructs Comodo Firewall to keep monitoring whether your computer is connected to any new wired or wireless network. The firewall will display an alert as shown below if it detects a new network (for example, when you connect to a wired home or office network or a Wi-Fi network)

DO Network Detected	
ect your location:	
I am at Home Choose if you are at home and have just connected your computer to a local network	
I am at Work Choose if you are at work place and have just connected your computer to a local network	
I am at Public Place Choose this option if you are at public place such as a coffee shop, hotel or school etc.	
	Choose if you are at home and have just connected your computer to a local network I am at Work Choose if you are at work place and have just connected your computer to a local network I am at Public Place Choose this option if you are at public place such as a coffee shop, hotel or

You can select the type of new network you are connected to, so that the firewall configuration is optimized for the type of connection. Comodo recommends users to leave this option at its default, enabled setting (*Default = Enabled*).

Enable Trustconnect alerts - If you are connecting to Internet at a public place like an airport or a coffee shop then you are potentially exposing yourself to danger. Unsecured public networks can allow other people to easily eavesdrop on your communications or even gain access to your computer to steal your confidential information. In order to safeguard against such attempts, Comodo recommends you encrypt your connection in public hotspots using TrustConnect - a secure Internet proxy service.

If selected, Comodo Firewall will display an alert if it detects you are connected to the Internet through an unsecured network (*Default=Enabled*). The drop-down options allow you to select the conditions under which you want alerts to be displayed:

		Enable automatic detection of private networks		
Deal Rules Insecured Wireless Networks Only Public and Unsecured Wireless Networks Only	plication Rules	Enable Trustconnect alerts Unsecured Wireless Networks Only		
		☑ Turn traffic animation effects	Unsecured Wireless Networks Only Public and Unsecured Wireless Networks	
Create rules for safe applications		🔄 Create rules for safe applicat	ions	

- Unsecured Wireless Networks Only (*Default*) TrustConnect alerts are displayed only if you are connecting to an unencrypted wireless network.
- **Public and Unsecured Wireless Networks only** TrustConnect alerts are displayed whenever you connect to a public wireless network irrespective of whether the connection is encrypted

You will be alerted and offered the opportunity to secure the connection via the following notification:

COMODO Creating Trust Online

Turn traffic animation effects on - By default, the Comodo Internet Security's 'Shield' tray icon displays a small animation whenever traffic moves to or from your computer.

If the traffic is outbound, you can see green arrows moving upwards on the right hand side of the shield. Similarly, for inbound traffic you can see yellow arrows moving down the left hand side. This provides a very useful indicator of the real-time movement of data in and out of your computer. Clear this check box If you would rather not see this animation (*Default = Enabled*).

- Create rules for safe applications Comodo Firewall trusts the applications if:
 - The application/file is included in the Trusted Files list under File Rating Settings;
 - The application is from a vendor included in the Trusted Software Vendors list under File Rating Settings;
 - The application is included in the extensive and constantly updated Comodo safelist.

By default, CIS does not automatically create 'allow' rules for safe applications. This helps saving the resource usage, simplifies the rules interface by reducing the number of 'Allowed' rules in it, reduces the number of pop-up alerts and is beneficial to beginners who find difficulties in setting up the rules.

Enabling this checkbox instructs CIS to begin learning the behavior of safe applications so that it can automatically generate the 'Allow' rules. These rules are listed in the **Application Rules** interface. The Advanced users can edit/modify the rules as they wish (*Default = Disabled*).

Background Note: Prior to version 4.x, CIS would automatically add an allow rule for 'safe' files to the rules interface. This allowed advanced users to have granular control over rules but could also lead to a cluttered rules interface. The constant addition of these 'allow' rules and the corresponding requirement to learn the behavior of applications that are already considered 'safe' also took a toll on system resources. In version 4.x and above, 'allow' rules for applications considered 'safe' are not automatically created - simplifying the rules interface and cutting resource overhead with no loss in security. Advanced users can re-enable this setting if they require the ability to edit rules for safe applications (or, informally, if they preferred the way rules were created in CIS version 3.x).

Set alert Frequency level - Enabling this option allows you to configure the amount of alerts that Comodo Firewall
generates, from the drop-down. It should be noted that this does not affect your security, which is determined by the
rules you have configured (for example, in 'Application Rules' and 'Global Rules'). For the majority of users, the
default setting of 'Low' is the perfect level - ensuring you are kept informed of connection attempts and suspicious
behaviors whilst not overwhelming you with alert messages. (Default=Disabled)

	WINDOW CONTRACTOR	
Turn traffic animation effects o		
Create rules for safe applicatio	ins	
Set alert frequency level	Low 💌	
🗌 Set new on-screen alert time		secs
Advanced	High Medium	
E Filter IPv6 traffic	Low	
Filter loopback traffic (e.g. 1	Very Low	

The options available are:

- Very High: The firewall shows separate alerts for outgoing and incoming connection requests for both TCP and UDP protocols on specific ports and for specific IP addresses, for an application. This setting provides the highest degree of visibility to inbound and outbound connection attempts but leads to a proliferation of firewall alerts. For example, using a browser to connect to your Internet home-page may generate as many as 5 separate alerts for an outgoing TCP connection alone.
- High: The firewall shows separate alerts for outgoing and incoming connection requests for both TCP and UDP protocols on specific ports for an application.
- Medium: The firewall shows alerts for outgoing and incoming connection requests for both TCP and UDP
 protocols for an application.
- Low: The firewall shows alerts for outgoing and incoming connection requests for an application. This is the setting recommended by Comodo and is suitable for the majority of users.
- Very Low: The firewall shows only one alert for an application.

The Alert Frequency settings refer only to connection attempts by applications or from IP addresses that you have not (yet) decided to trust. For example, you could specify a very high alert frequency level, but not receive any alerts at all if you have chosen to trust the application that is making the connection attempt.

 Set new on-screen alert time out to: Determines how long the Firewall shows an alert for without any user intervention. By default, the timeout is set at 120 seconds. You may adjust this setting to your own preference.

Advanced Settings

Comodo Firewall features advanced detection settings to help protect your computer against common types of denial of service (DoS) attack. When launching a denial of service or 'flood' attack, an attacker bombards a target machine with so many connection requests that your computer is unable to accept legitimate connections, effectively shutting down your web, email, FTP or VPN server.

Filter IP v6 traffic - If enabled, CIS will filter IPv6 network traffic in addition to IPv4 traffic.(Default = Disabled).

Background Note: IPv6 stands for Internet Protocol Version 6 and is intended to replace Internet Protocol Version 4 (IPv4). The move is primarily driven by the anticipated exhaustion of available IP addresses. IPv4 was developed in 1981 and is still the most widely deployed version - accounting for almost all of today's Internet traffic. However, because IPv4 uses 32 bits for IP addresses, there is a physical upper limit of around 4.3 billion possible IP addresses - a figure widely viewed as inadequate to cope with the further expansion of the Internet. In simple terms, the number of devices requiring IP addresses is in danger of exceeding the number of IP addresses that are available. This hard limit has already led to the development of 'work-around' solutions such as Network Address Translation (NAT), which enable multiple hosts on private networks to access the Internet using a single IP addresse.

IPv6 on the other hand, uses 128 bits per address (delivering 3.4×1038 unique addresses) and is viewed as the only realistic, long term solution to IP address exhaustion. IPv6 also implements numerous enhancements that are not present in IPv4 - including greater security, improved support for mobile devices and more efficient routing of data packets.

- Filter loopback traffic: Loopback connections refer to the internal communications within your PC. Any data transmitted by your computer through a loopback connection is immediately also received by it. This involves no connection outside your computer to the Internet or a local network. The IP address of the loopback network is 127.0.0.1, which you may have heard referred to under its domain name of 'http://localhost' i.e. the address of your computer. Loopback channel attacks can be used to flood your computer with TCP and/or UDP requests which can smash your IP stack or crash your computer. Leaving this box checked means the firewall filter traffic sent through this channel. communicate using the loopback channel. (*Default = Enabled*).
- Block Fragmented IP traffic When a connection is opened between two computers, they must agree on a
 Maximum Transmission Unit (MTU). IP Datagram fragmentation occurs when data passes through a router with an
 MTU less than the MTU you are using i.e when a datagram is larger than the MTU of the network over which it must
 be sent, it is divided into smaller 'fragments' which are each sent separately. Fragmented IP packets can create
 threats similar to a DOS attack. Moreover, these fragmentations can double the amount of time it takes to send a
 single packet and slow down your download time (*Default = Disabled*).
- Do protocol Analysis Protocol Analysis is key to the detection of fake packets used in denial of service attacks. Checking this option means Comodo Firewall checks every packet conforms to that protocols standards. If not, then the packets are blocked (*Default = Disabled*).
- Enable anti-ARP spoofing A gratuitous Address Resolution Protocol (ARP) frame is an ARP Reply that is broadcast to all machines in a network and is not in response to any ARP Request. When an ARP Reply is broadcast, all hosts are required to update their local ARP caches, whether or not the ARP Reply was in response to an ARP Request they had issued. Gratuitous ARP frames are important as they update your machine's ARP cache whenever there is a change to another machine on the network (for example, if a network card is replaced in a machine on the network, then a gratuitous ARP frame informs your machine of this change and requests to update your ARP cache so that data can be correctly routed). However, while ARP calls might be relevant to an ever shifting office network comprising many machines that need to keep each other updated , it is of far less relevance to, say, a single computer in your home network. Enabling this setting helps to block such requests protecting the ARP cache from potentially malicious updates (*Default = Disabled*).

6.2.3.2. Application Rules

Overview of Rules and Rulesets

Whenever an application makes a request for Internet or network access, Comodo Firewall allows or denies this request based upon the Firewall Ruleset that has been specified for that application. Firewall Rulesets are, in turn, made up from one or more individual network access rules. Each individual network access rule contains instructions that determine whether the application should be allowed or blocked; which protocols it is allowed to use; which ports it is allowed to use and so forth.

COMODO Advanced Settings Application Rules following firewall application rules are active on this computer The application's name is listed directly Treat As Q Application above the rules applied 📃 🖂 System Custom to it Allow System To Send Requests If The Target **1** 1-12 The rule applied to an Allow System To Receive Requests If The Sen. application determines COMODO Internet Security Outgoing Only its network access rights Allow All Outgoing Requests C Block and Log All Unmatching Requests C:\Program Files\COMODO\Dragon\dragon_upda. Custom Each ruleset is derived 🗖 🗉 C:\Program Files\COMODO\\ceDragon\\cedragon_u. Custom from atleast one but usually a combination of individually 🕕 🖂 C:\Program Files\Opera\opera.exe Web Brows configurable rules ✓ Allow Access to Loopback Zone Allow Outgoing HTTP Requests Name of the pre-defined ruleset Allow Outgoing FTP Requests ✓ Allow Outgoing FTP-PASV Requests

The first column, **Application**, displays a list of the applications on your system for which a Firewall ruleset has been deployed. If the application belongs to a file group, then all member applications assume the ruleset of the file group. The second column, **Treat as**, column displays the name of the Firewall ruleset assigned to the application or group of applications in column one.

You can use the search option to find a specific name in the list.

To use the search option, click the search icon at the far right in the column header.

→ Applicati O	Search	×<>
Application	IODO Internet Security	Outgoing Only
Treat As	iobo internet Security	Oalgoing Only
	farment for all a second second second second	

- Click the chevron on the left side of the column header and select the search criteria from the drop-down.
- Enter partly or fully the name of the item as per the selected criteria in the search field.
- Click the right or left arrow at the far right of the column header to begin the search.
- Click the 🗮 icon in the search field to close the search option.

General Navigation:

Clicking the handle at the bottom center of the interface opens an option panel with the following options:

	···· A				9
-				Maua	
Add	Edit	Remove	Move Up	Move Down	Purge

COMODO Creating Trust Online

- Add Allows the user to Add a new Application to the list then create it's ruleset. See the sections 'Creating or Modifying Firewall Rules' and 'Adding and Editing a Firewall Control Rule'.
- Edit Allows the user to modify the Firewall rule or ruleset of the selected application. See the sections 'Creating
 or Modifying Firewall Rules' and 'Adding and Editing a Firewall Rule'.
- Remove Deletes the selected ruleset.
- **Purge** Runs a system check to verify that all the applications for which rulesets are listed are actually installed on the host machine at the path specified. If not, the rule is removed, or 'purged', from the list.

If you wish to modify the **firewall ruleset** for an application:

- Double click on the application name to begin 'Creating or Modifying Firewall Rules'
- Select the application name click the handle at the bottom right and choose 'Edit' from the options to begin 'Creating or Modifying Firewall Rules'

If you wish to modify an **individual rule** within the ruleset:

- Double click on the specific rule to begin 'Adding and Editing a Firewall Rule'
- Select the specific rule and click the handle at the bottom center and choose 'Edit' from the options to begin 'Adding and Editing a Firewall Rule'

Users can also re-prioritize rulesets by clicking the handle at the bottom center and select 'Move Up' or 'Move Down' from the options.

Although each ruleset can be defined from the ground up by individually configuring its constituent rules, this practice would be time consuming if it had to be performed for every single program on your system. For this reason, Comodo Firewall contains a selection of predefined rulesets according to broad application category. For example, you may choose to apply the ruleset 'Web Browser' to the applications like 'Internet Explorer', 'Firefox' and 'Opera'. Each predefined ruleset has been specifically designed by Comodo Firewall to optimize the security level of a certain type of application. Users can, of course, modify these predefined rulesets to suit their environment and requirements. For more details, see **Predefined Rule Sets**.

- See Application Rule interface for an introduction to the rule setting interface
- · See Creating and Modifying Firewall Rulesets to learn how to create and edit Firewall rulesets
- See Understanding Firewall Rules for an overview of the meaning, construction and importance of individual rules
- See Adding and Editing a Firewall Rule for an explanation of individual rule configuration

Application Rule interface

Firewall rules can be added/modified/removed and re-ordered through the Application Rule interface. Any rules created using **Adding and Editing a Firewall Rule** is displayed in this list.

The Application Rule interface is displayed when you click 'Add' or 'Edit' from the options in 'Application Rules' interface.

COMODO Creating Trust Online*

	? 🗆 X

- Click the X icon in the search field to close the search option.

Creating and Modifying Firewall Rulesets

To begin defining an application's Firewall ruleset, you need take two basic steps.

- Step 1 Select the application that you wish the ruleset is to be applied.
- Step2 Configure the rules for this application's ruleset.

Step 1 - Select the application that you wish the ruleset is to be applied

If you wish to define a ruleset for a new application (i.e. one that is not already listed) then click the handle from the **Application Rules interface** and select 'Add' from the options. This brings up the '**Application Rule**' interface shown below:

COMODO Application Rule	? 🗆 X
Name:	Browse 💌
🔿 Use Ruleset:	Web Browser 💌
⊙ Use a Custom Ruleset	Copy from 👻
Rules	Q
OK	Cancel

Because this is a new application, the 'Application Path' field is blank. (If you are modifying an existing ruleset, then this interface shows the individual rules for that application's ruleset).

Click 'Browse' button.

? × Browse ▼	
File Groups	Executables
Files	All Applications
Running Processes	Important Files/Folders
	Web Browser Data Folders
	Windows Updater Applications
	Windows System Applications
	Temporary Files
	COMODO Files/Folders
	COMODO Internet Security
	Startup Folders
	Windows Management
	3rd Party Protocol Drivers

You now have 3 methods available to choose the application for which you wish to create a ruleset - File Groups; Files and Running Processes and

- i. File Groups choosing this option allows you to create firewall ruleset for a category of pre-set files or folders. For example, selecting 'Executables' would enable you to create a Firewall Ruleset for any file that attempts to connect to the Internet with the extensions .exe .dll .sys .ocx .bat .pif .scr .cpl . Other such categories available include 'Windows System Applications' , 'Windows Updater Applications' , 'Start Up Folders' etc each of which provide a fast and convenient way to apply a generic ruleset to important files and folders. To view the file types and folders that are affected by choosing one of these options, you need to visit the 'Protected Files' of Comodo Internet Security by navigating to: Advanced Settings > Security Settings > Defense+ > HIPS > File Protection> Protected Files and clicking the handle from the bottom center > Groups. For more details on file groups, refer to the section File Groups.
- ii. Files this option is the easiest for most users and simply allows you to browse to the location of the application for which you want to deploy the firewall ruleset. In the example below, we have decided to create a firewall ruleset for the Opera web browser.

Open								? 🗙
Look <u>i</u> n:	🚞 Opera		*	0	ø	ø	•	
My Recent Documents Desktop My Documents	 defaults extra gstreamer locale mapi pluginwrapper program region skin styles ui C3nform.vxml D3DCompiler_43 	encoding files.sig files_old.sig files_old.sig html5_entity_init html40_entities.dtd files_old opera mathml.dtd opera opera.dll opera_install_log operaprefs_default pubsuffix 3.dll						
My Computer	File <u>n</u> ame:	opera				~]	<u>O</u> pen
My Network	Files of <u>type</u> :	All files (*.*) Open as <u>r</u> ead-only				~]	Cancel

iii. **Running Processes** - as the name suggests, this option allows you to create and deploy firewall ruleset for any process that is currently running on your PC.

× COMODO Browse for Processes PID Application 🖃 [cis.exe 3128 [cis.exe 2184 🖃 📩 services.exe 1496 🖃 🥅 svchost.exe 188 🔭 wuauclt.exe 620 🖃 🛅 svchost.exe 1684 wmiprvse.exe 2672 unsecapp.exe 2540 🗂 svchost.exe 600 launcher_service.exe 1672 WifiSvc.exe 1096 sychost.exe 552 svchost.exe 1844 acs.exe 876 spoolsv.exe 792 tvnserver.exe 878 1036 dragon_updater.exe 628 🖃 📷 Idle 0 🖃 📷 System 4 🖃 🔚 smss.exe 824 OK. Cancel

You can choose an individual process (shown above) or the parent process of a set of running processes. Click 'OK' to confirm your choice.

Having selected the individual application, running process or file group, the next stage is to Configure the rules for this application's Firewall Ruleset.

Step 2 - Configure the rules for this application's ruleset

There are two broad options available for creating a ruleset that applies to an application - Use a Predefined Ruleset or Use a Custom Ruleset.

Use a Predefined Ruleset - Selecting this option allows the user to quickly deploy a existing ruleset on to the target application. Choose the ruleset you wish to use from the drop-down menu. In the example below, we have chosen 'Web Browser' because we are creating a ruleset for the 'Opera' browser. The name of the predefined ruleset you choose is displayed in the Treat As column for that application in the interface (Default = Disabled).

COMODO Creating Trust Online

COMODO Creating Trust Online*

COMODO Application Rule	? □ ×
Name: C:\Program Files\Opera\opera.exe	Browse -
 O Use Ruleset: ○ Use a Custom Ruleset 	Web Browser Web Browser Email Client
Rules	Ftp Client Allowed Application Blocked Application Outgoing Only
OK	Cancel

Note: Predefined Rulesets, once chosen, cannot be modified *directly* from this interface - they can only be modified and defined using the **Predefined Rulesets** interface. If you require the ability to add or modify rules for an application then you are effectively creating a new, custom ruleset and should choose the more flexible **Use Custom Ruleset** option instead.

Use a Custom Ruleset - designed for more experienced users, the Custom Ruleset option enables full control
over the configuration of Firewall Ruleset and the parameters of each rule within that ruleset (Default =
Enabled).

COMODO Creating Trust Online*

Name:	en regramme (opera (opera topera	Browse V	
· · · ·	e Ruleset	Web Browser 💌	
⊙ Use	e a Custom Ruleset	Copy from Ruleset	Web Browser
	Rules	Another Application +	Email Client
	 Allow Access to Loopback Zone 		Ftp Client
	✓ Allow Outgoing HTTP Requests		Allowed Application Blocked Application
	✓ Allow Outgoing FTP Requests		Outgoing Only
	✓ Allow Outgoing FTP-PASV Requests		
	✓ Allow Outgoing DNS Requests		'Use a custom Ruleset'
	Block and Log All Unmatching Requests	populate the cor predefine shown, the the 'Wel n Using t experie re-order, m	py from > Ruleset' will the rules window with istiuent rules of the d rule. In the example e individual rules from b Browser' policy are ow accessible. his as starting point, inced users can add, hodify and remove rule it the application

You can create an entirely new ruleset or use a predefined ruleset as a starting point by:

- Clicking the handle from the bottom right and choosing 'Add' from the options to add individual Firewall rules. See 'Adding and Editing a Firewall Rule' for an overview of the process.
- Use the 'Copy From' button to populate the list with the Firewall rules of a Predefined Firewall Rule.
- Use the 'Copy From' button to populate the list with the Firewall rules of another application's ruleset.

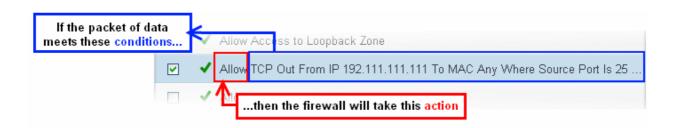

General Tips:

- If you wish to create a reusable ruleset for deployment on multiple applications, we advise you add a new
 Predefined Firewall Rules (or modify one of the existing ones to suit your needs) then come back to this
 section and use the 'Ruleset' option to roll it out.
- If you want to build a bespoke ruleset for maybe one or two specific applications, then we advise you choose
 the 'Use a Custom Ruleset' option and create your ruleset either from scratch by adding individual rules or by
 using one of the built-in rulesets as a starting point.

Understanding Firewall Rules

At their core, each Firewall can be thought of as a simple **IF THEN** trigger - a set of **conditions** (or attributes) pertaining to a packet of data from a particular application and an **action** it that is enforced if those conditions are met.

As a packet filtering firewall, Comodo Firewall analyzes the attributes of *every single* packet of data that attempts to enter or leave your computer. Attributes of a packet include the application that is sending or receiving the packet, the protocol it is using, the direction in which it is traveling, the source and destination IP addresses and the ports it is attempting to traverse. The firewall then tries to find a Firewall rule that matches all the conditional attributes of this packet in order to determine whether or not it should be allowed to proceed. If there is no corresponding Firewall rule, then the connection is automatically blocked until a rule is created.

The actual **conditions** (attributes) you see * on a particular Firewall Rule are determined by the protocol chosen in **Adding and Editing a Firewall Rule**

If you chose 'TCP', 'UDP' or 'TCP and 'UDP', then the rule has the form: Action |Protocol | Direction |Source Address | Destination Address | Source Port | Destination Port

If you chose 'ICMP', then the rule has the form: Action |Protocol | Direction | Source Address | Destination Address | ICMP Details

If you chose 'IP', then the rule has the form: Action | Protocol | Direction | Source Address | Destination Address | IP Details

- Action: The action the firewall takes when the conditions of the rule are met. The rule shows 'Allow', 'Block' or 'Ask'.**
- **Protocol**: States the protocol that the target application must be attempting to use when sending or receiving packets of data. The rule shows '**TCP**', '**UDP**', '**TCP** or **UDP**', '**ICMP**' or '**IP**'
- Direction: States the direction of traffic that the data packet must be attempting to negotiate. The rule shows 'In', 'Out' or 'In/Out'
- Source Address: States the source address of the connection attempt. The rule shows 'From' followed by one of the following: IP, IP range, IP Mask, Network Zone, Host Name or Mac Address
- Destination Address: States the address of the connection attempt. The rule shows 'To' followed by one of the following: IP, IP range, IP Mask, Network Zone, Host Name or Mac Address
- Source Port: States the port(s) that the application must be attempting to send packets of data through. Shows 'Where Source Port Is' followed by one of the following: 'Any', 'Port #', 'Port Range' or 'Port Set'
- Destination Port: States the port(s) on the remote entity that the application must be attempting to send to. Shows 'Where Source Port Is' followed by one of the following: 'Any', 'Port #', 'Port Range' or 'Port Set'
- ICMP Details: States the ICMP message that must be detected to trigger the action. See Adding and Editing a Firewall Rule for details of available messages that can be displayed.
- IP Details: States the type of IP protocol that must be detected to trigger the action: See Adding and Editing a
 Firewall Rule to see the list of available IP protocols that can be displayed here.

Once a rule is applied, Comodo Firewall monitors all network traffic relating to the chosen application and take the specified action if the conditions are met. Users should also see the section 'Global Rules' to understand the interaction between Application Rules and Global Rules.

* If you chose to add a descriptive name when creating the rule then this name is displayed here rather than it's full parameters. See the next section, 'Adding and Editing a Firewall Rule', for more details.

** If you selected 'Log as a firewall event if this rule is fired' then the action is postfixed with 'Log'. (e.g. Block & Log)

Adding and Editing a Firewall Rule

The Firewall Rule Interface is used to configure the actions and conditions of an individual Firewall rule. If you are not an experienced firewall user or are unsure about the settings in this area, we advise you first gain some background knowledge by reading the sections 'Understanding Firewall Rules', 'Overview of Rules and Policies' and 'Creating and Modifying Firewall Rulesets'

сомод	PO Firewall Rule	×
Action:	Allow 🔽 Log as firewall event if this rule is fired	
Protocol:	TCP or UDP	
Direction:	IN or OUT	
Description:		
Source A	Address Destination Address Source Port Destination Port	
Exclud	de (i.e. NOT the choise below)	
	Type: Any Address 💙	
	OK Can	cel

General Settings

- Action: Define the action the firewall takes when the conditions of the rule are met. Options available via the drop down menu are 'Allow' (*Default*), 'Block' or 'Ask'.
- Protocol: Allows the user to specify which protocol the data packet should be using. Options available via the drop down menu are 'TCP', 'UDP', 'TCP or UDP' (*Default*), 'ICMP' or 'IP'.

Note: Your choice here alters the choices available to you in the tab structure on the lower half of the interface.

- Direction: Allows the user to define which direction the packets should be traveling. Options available via the drop down menu are 'In', 'Out' or 'In/Out' (Default).
- Log as a firewall event if this rule is fired: Checking this option creates an entry in the firewall event log viewer whenever this rule is called into operation. (i.e. when ALL conditions have been met) (Default = Disabled).
- Description: Allows you to type a friendly name for the rule. Some users find it more intuitive to name a rule by it's
 intended purpose. ('Allow Outgoing HTTP requests'). If you create a friendly name, then this is displayed to represent
 instead of the full actions/conditions in the main Application Rules interface and the Application Rule interface.

Protocol

i. TCP', 'UPD' or 'TCP or UDP'

If you select 'TCP', 'UPD' or 'TCP or UDP' as the Protocol for your network, then you have to define the source and destination IP addresses and ports receiving and sending the information.

Source Address	Destination Address	Source Port	Destination Port
] Exclude (i.e. N	OT the choise below)		
Type:	Any Address 🗸 🗸		
	Any Address		
	Host Name		
	IPv4 Address Range		
	IPv4 Single Address		
	IPv4 Subnet Mask		
	IPv6 Single Address		
	IPv6 Subnet Mask		
	MAC Address		
	Network Zone		

Source Address and Destination Address:

- 1. You can choose any IP Address by selecting Any Address in the Type drop-down box. This menu defaults to an IP range of 0.0.0.0- 255.255.255 to allow connection from all IP addresses.
- 2. You can choose a named host by selecting a Host Name which denotes your IP address.
- 3. You can choose an IPv4 Range by selecting IPv4 Address Range for example the range in your private network and entering the IP addresses in the Start Range and End Range text boxes.
- 4. You can choose a Single IPv4 address by selecting IPv4 Single Address and entering the IP address in the IP address text box, e.g., 192.168.200.113.
- You can choose IPv4 Mask by selecting IPv4 Subnet Mask. IP networks can be divided into smaller networks called sub-networks (or subnets). An IP address/ Mask is a subnet defined by IP address and mask of the network. Enter the IP address and Mask of the network.
- 6. You can choose a Single IPv6 address by selecting IPv6 Single Address and entering the IP address in the IP address text box, e.g., 3ffe:1900:4545:3:200:f8ff:fe21:67cf.
- You can choose IPv6 Mask by selecting IPv6 Subnet Mask. IP networks can be divided into smaller networks called sub-networks (or subnets). An IP address/ Mask is a subnet defined by IP address and mask of the network. Enter the IP address and Mask of the network.
- 8. You can choose a MAC Address by selecting MAC Address and entering the address in the address text box.
- 9. You can choose an entire network zone by selecting Zone .This menu defaults to Local Area Network. But you can also define your own zone by first creating a Zone through the 'Network Zones' area.
- Exclude (i.e. NOT the choice below): The opposite of what you specify is applicable. For example, if you are
 creating an Allow rule and you check the Exclude box in the Source IP tab and enter values for the IP range,
 then that IP range is excluded. You have to create a separate Allow rule for the range of IP addresses that
 you DO want to use.

Source Port and Destination Port:

Enter the source and destination Port in the text box.

Source Address	Destination Ad	dress	Source Port	Destination Port
Exclude (i.e. N	OT the choise below;			
Туре:	Any	~		
	A Port Range	R		
	A Set of Ports	~		
	A Single Port			
	Any			

- 1. You can choose any port number by selecting Any set by default , 0- 65535.
- 2. You can choose a Single Port number by selecting Single Port and selecting the single port numbers from the list.
- 3. You can choose a Port Range by selecting Port Range and selecting the port numbers from the From and To list.
- 4. You can choose a predefined **Port Set** by choosing A Set of Ports. If you wish to create a port set then please see the section '**Port Sets**'.

ii. ICMP

When you select ICMP as the protocol in **General Settings**, you are shown a list of ICMP message types in the 'ICMP Details' tab alongside the **Destination Address** tabs. The last two tabs are configured identically to the **explanation above**. You cannot see the source and destination port tabs.

ICMP Details

ICMP (Internet Control Message Protocol) packets contain error and control information which is used to announce network errors, network congestion, timeouts, and to assist in troubleshooting. It is used mainly for performing traces and pings. Pinging is frequently used to perform a quick test before attempting to initiate communications. If you are using or have used a peer-to-peer file-sharing program, you might find yourself being pinged a lot. So you can create rules to allow / block specific types of ping requests. With Comodo Firewall you can create rules to allow/ deny inbound ICMP packets that provide you with information and minimize security risk.

Description: Source Address Destination Address **ICMP** Details Message: Any ¥ Custom Any ICMP Echo Request 2 ICMP Echo Reply ICMP Net Unreachable ICMP Host Unreachable ICMP Protocol Unreachable ICMP Port Unreachable ICMP Time Exceeded ICMP Source Quench ICMP Fragmentation Needed

- 1. Type in the source/ destination IP address. Source IP is the IP address from which the traffic originated and destination IP is the IP address of the computer that is receiving packets of information.
- Specify ICMP Message , Types and Codes. An ICMP message includes a Message that specifies the type, that is, the format of the ICMP message.
 When you select a particular ICMP message , the menu defaults to set its code and type as well. If you select the ICMP message type 'Custom' then you are asked to specify the code and type.

iii. IP

When you select IP as the protocol in **General Settings**, you are shown a list of IP message type in the 'IP Details' tab alongside the **Source Address and Destination Address** tabs. The last two tabs are configured identically to the **explanation above**. You cannot see the source and destination port tabs.

Description:			
Source Address	Destination Address	IP Details	
	Any Custom Any TCP UDP ICMP IGMP Raw IP PUP GGP		
	GRE RSVP ICMPv6		

IP Details

Select the types of IP protocol that you wish to allow, from the ones that are listed.

6.2.3.3. Global Rules

Unlike Application rules, which are applied to and triggered by traffic relating to a specific application, Global Rules are applied to all traffic traveling in and out of your computer.

Comodo Firewall analyzes every packet of data in and out of your PC using combination of Application and Global Rules.

- For Outgoing connection attempts, the application rules are consulted first and then the global rules second.
- · For Incoming connection attempts, the global rules are consulted first and then the application rules second.

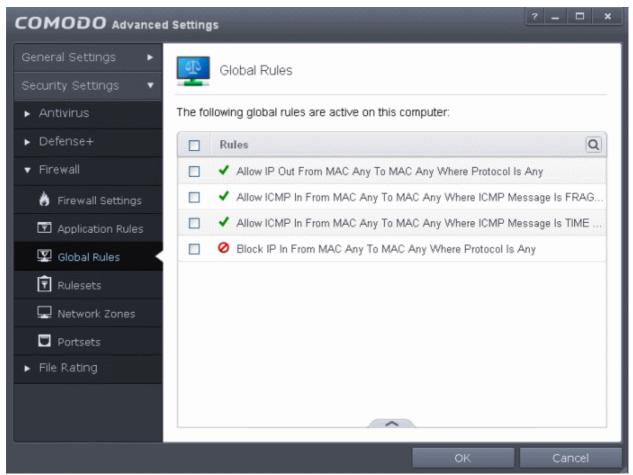

Outgoing traffic Traffic that is	My Computer	4
travelling from your computer to the outside is filtered by the	Comodo Firewall Application Rules	Incoming Traffic Traffic that is
application rules first and then by the global rules	Comodo Firewall Global Rules	travelling from the outside into your computer is filtered by the global rules
•	Other Computers/ Internet websites etc	first and then by the application rules

ſ

Therefore, outgoing traffic has to 'pass' both the application rule then any global rules before it is allowed out of your system. Similarly, incoming traffic has to 'pass' any global rules first then application specific rules that may apply to the packet.

Global Rules are mainly, but not exclusively, used to filter incoming traffic for protocols other than TCP or UDP.

• The Global Rules panel, accessible by clicking Security Settings > Firewall > Global rules tab from the Advanced tasks interface, allows you to view, add and manage the rules

You can use the search option to find a specific rule in the list.

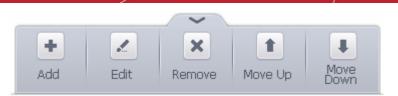

To use the search option, click the search icon at the far right in the column header.

~	Rules	Q	Search	×<	>)
٦.	Rul	es	w IP Out From MAC Any To MAC Any Where Protocol Is Any			

- Click the chevron on the left side of the column header and select the search criteria from the drop-down.
- Enter partly or fully the name of the item as per the selected criteria in the search field.
- Click the right or left arrow at the far right of the column header to begin the search.
- Click the X icon in the search field to close the search option.

General Navigation:

Clicking the handle at the bottom center of the interface opens an option panel with the following options:

- Add Allows you to add a new global rule. See the section 'Adding and Editing a Firewall Rule' for guidance on creating a new rule.
- Edit Allows you to modify the selected global rule. See the section 'Adding and Editing a Firewall Rule' for guidance on editing a new rule.
- **Remove** Deletes the selected rule.
- **Purge** Runs a system check to verify that all the applications for which rules are listed are actually installed on the host machine at the path specified. If not, the rule is removed, or 'purged', from the list.

The configuration of Global Rules is identical to that for application rules. To add a global rule, click the 'Add...' button on the right. To edit an existing global rule, right click and select 'edit'.

- See Application Rules for an introduction to the rule setting interface.
- See Understanding Firewall Rules for an overview of the meaning, construction and importance of individual rules.
- See Adding and Editing a Firewall Rule for an explanation of individual rule configuration.

6.2.3.4. Firewall Rule Sets

As the name suggests, a firewall Ruleset is a set of one or more individual Firewall rules that have been saved and which can be re-deployed on multiple applications. This section contains advice on the following:

- Predefined Rulesets
- Creating a new ruleset

The Predefined rulesets interface can be accessed by clicking Security Settings > Firewall > Rulesets from the 'Advanced Settings' interface.

COMODO Creating Trust Online*

COMODO Advanced	Setting	5	? – 🗆 🗙

You can use the search option to find a specific ruleset in the list.

To use the search option, click the search icon at the far right in the column header.

→ Ruleset Na C	Search	x < >
Ruleset Name		
	2	

- Click the chevron on the left side of the column header and select the search criteria from the drop-down.
- Enter partly or fully the name of the item as per the selected criteria in the search field.
- Click the right or left arrow at the far right of the column header to begin the search.
- Click the 🗮 icon in the search field to close the search option.

Predefined Rulesets

Although each application's firewall ruleset *could* be defined from the ground up by individually configuring its constituent rules, this practice may prove time consuming if it had to be performed for every single program on your system. For this reason, Comodo Firewall contains a selection of predefined rulesets according to broad application category. For example, you may choose to apply the ruleset 'Web Browser' to the applications 'Internet Explorer', 'Firefox' and 'Opera'. Each predefined ruleset has been specifically designed by Comodo to optimize the security level of a certain type of application. Users can, of course, modify these predefined policies to suit their environment and requirements. (for example, you may wish to keep the 'Web Browsers' name but wish to redefine the parameters of it rules).

Creating a new ruleset

You can create new rulesets with network access control rules customized as per your requirements and can roll out them to

required applications while creating Firewall ruleset for the applications individually.

To add a new Ruleset

Click the handle from the bottom center and select 'Add' from the options

COMODO Firewall Ruleset	? 🗖 🗙
Name: Ruleset for Opera	
🔿 Use Ruleset:	
Ose a Custom Ruleset	Copy from 🔻
Rules	Q
Allow Access to Loopback Zone	
📃 🔥 Allow And Log TCP Or UDP In/Out From IP 192.111.111.111 To MAC	Any Wh
Allow Outgoing DNS Requests	
Block and Log All Unmatching Requests	
OK	Cancel

As this is a new ruleset, you need to name it in the text field at the top. It is advised that you choose a name that
accurately describes the category/type of application you wish to define the ruleset for. Next you should add and
configure the individual rules for this ruleset. See 'Adding and Editing a Firewall Rule' for more advice on this.

Once created, this ruleset can be quickly called from 'Use Ruleset' when creating or modifying a Firewall ruleset.

COMODO Creating Trust Online*

	? 🗆 🗙

To view or edit an existing predefined Ruleset

- Double click on the Ruleset Name in the list
 or
- · Select the Ruleset Name, click the handle from the bottom center and select Edit from the options
- Details of the process from this point on can be found here.

6.2.3.5. Network Zones

The Network Zones panel allows you to:

- · Define network zones that are trusted, and to specify access privileges to them
- · Define network zones that are untrusted, and to block access to them

The Network Zones panel can be accessed by clicking Security Settings > Firewall > Network Zones from the 'Advanced Settings' interface.

COMODO Creating Trust Online*

COMODO Advanced	Settings				? _ [×

				ОК	Canc	el		

The panel has two tabs:

- Network Zones Allows you to define network zones and to allow access to them for applications, with the access
 privileges specified through Application Rule interface. Refer to 'Creating or Modifying Firewall Rules' for more
 details.
- Blocked Zones Allows you to define trusted networks that are not trustworthy and to block access to them.

6.2.3.5.1. Network Zones

A 'Network Zone' can consist of an individual machine (including a single home computer connected to Internet) or a network of thousands of machines to which access can be granted or denied.

Background Note: A computer network is a connection between computers through a cable or some type of wireless connection. It enables users to share information and devices between computers and other users within the network. Obviously, there are certain computer networks where you need to grant access to, including your home or work network. Conversely, there may be other networks where you want to restrict communication with - or even block entirely.

Network Zone	es		
The following network zo	ones are defined on	this computer.	
Network Zones	Blocked Zones		
Zone Name			
📋 🗄 Loopback Zone			
🛅 🛨 Work #1			
🗎 🗄 Public #1			
	~		
		ОК	Cancel

Note 1: Adding a zone to this area does not, in itself, define any permission levels or access rights to the zone. This area allows to define the zones so you can quickly assign such permissions in other areas of the firewall.

Note 2: A network zone can be designated as 'Trusted' and allowed access from the 'Manage Network Connections' interface (An example would be your home computer or network).

Note 3: A network zone can be designated as 'Blocked' and denied access by using the 'Blocked Zones' interface. (An example would be a known spyware site).

Note 4: An application can be assigned specific access rights to and from a network zone when defining an **Application Rule**. Similarly, a custom **Global Rule** can be assigned to a network zone to all activity from a zone.

Note 5: By default, Comodo Firewall automatically detects any new networks (LAN, Wireless etc) once you connect to them. This can be disabled by deselecting the option 'Enable automatic detection of private networks' in the **Firewall Settings** panel.

Defining a new Network Zone

To add a new network zone:

- Step 1 Define a name for the zone.
- Step 2 Select the addresses to be included in this zone.

COMODO Creating Trust Online*

Step 1 - Define a name for the zone

1. Click the handle from the bottom center select 'Add' > 'New Network Zone'.

		~		
	+	1	×	
	Add	Edit	Remove	
	New N	letwork Zone	h.	
_		ddress 🤻	ОК	

A dialog box will appear, prompting you to specify a name for the new zone.

2. Choose a name that accurately describes the network zone you are creating.

COMODO Network Zone	?	×
Zone Name		
My Home		
	_	_
	anc	el

- Select the checkbox 'Public Network' if you are defining a network zone for a network in a public place, for example, when you are connecting to a Wi-Fi network at an airport, restaurant etc., so that Comodo Firewall will optimize the configuration accordingly.
- 4. Click 'Apply' to confirm your zone name.

This adds the name of your new zone to the Network Zones list.

Network Zones				
The following network zones are defined on this computer.				
Netwo	rk Zones Blocked Zones			
Zone Na	me			
🛅 🗄 Loopback Zone				
	ork #1			
E + P	iblic #1			
🖹 🗆 M	y Home			
L (8	dd addresses he r e)			
	μζ			

Step 2 - Select the addresses to be included in this zone

1. Select the network name, click the handle at the bottom center and choose 'Add' > 'New Address' from the options or click the + button beside the new network zone name and double click on '(add addresses here)'

The 'Address' dialog allows you to select an address from the Type drop-down box shown below (*Default = Any Address*). The Exclude check box will be enabled only if any other choice is selected from the drop-down box.

соморс	Address			? X
Exclude (i.e.	NOT the choise below)			
Туре:	Any Address	~		
	Any Address			
	Host Name			
	IPv4 Address Range	R		
	IPv4 Single Address	0		
	IPv4 Subnet Mask			
	IPv6 Single Address		< C	ancel
	IPv6 Subnet Mask			
	MAC Address			

Select Address:

1. You can choose any IP Address by selecting Any Address in the Type drop-down box. This menu defaults to an IP range of 0.0.0.0- 255.255.255 to allow connection from all IP addresses.

- 2. You can choose a named host by selecting a Host Name which denotes your IP address.
- 3. You can choose an IPv4 Range by selecting IPv4 Address Range for example the range in your private network and entering the IP addresses in the Start Range and End Range text boxes.
- 4. You can choose a Single IPv4 address by selecting IPv4 Single Address and entering the IP address in the IP address text box, e.g., 192.168.200.113.
- You can choose IPv4 Mask by selecting IPv4 Subnet Mask. IP networks can be divided into smaller networks called sub-networks (or subnets). An IP address/ Mask is a subnet defined by IP address and mask of the network. Enter the IP address and Mask of the network.
- You can choose a Single IPv6 address by selecting IPv6 Single Address and entering the IP address in the IP address text box, e.g., 3ffe:1900:4545:3:200:f8ff:fe21:67cf.
- You can choose IPv6 Mask by selecting IPv6 Subnet Mask. IP networks can be divided into smaller networks called sub-networks (or subnets). An IP address/ Mask is a subnet defined by IP address and mask of the network. Enter the IP address and Mask of the network.
- You can choose a MAC Address by selecting MAC Address and entering the address in the address text box.
- Exclude (i.e. NOT the choice below): The opposite of what you specify is applicable.
- 2. Click 'OK' to confirm your choice.
- 3. Click 'OK' in the 'Network Zones' interface.

The new zone now appears in the main list along with the addresses you assigned to it.

Once created, a network zone can be:

Quickly called as 'Zone' when creating or modifying a Firewall Ruleset

Source Address	Destination Address	Source Port	Destination Port
📃 Exclude (i.e. N	IOT the choise below)		
Туре:	Network Zone		
Zone	×		
	Loopback Zone		
	Work #1		
	Public #1		
	My Home		

Quickly called and designated as a blocked zone from the 'Blocked Zones' interface

To edit the name of an existing Network Zone

1. Select the name of the zone in the list (e.g. My Home), click the handle at the bottom center and choose 'Edit' from the options or double click on the network zone name.

COMODO Network Zone		? X
Zone Name My Home Public Network		
▶	ОК	Cancel

2. Edit the name of the zone.

To add more addresses to an existing Network Zone

- Select the network name, click the handle at the bottom center and choose 'Add > A new Address' from the options
- Add new address from the 'Address' interface.

To modify or change the existing address in a zone

- Click the + button beside the network zone name to expand the addresses
- Double click on the address to be edited or select the address, click the handle from the bottom center and choose Edit from the options
- Edit the address from the 'Address' interface.

6.2.3.5.2. Blocked Zones

A computer network enables users to share information and devices between computers and other users within the network. Obviously, there are certain computer networks that you need to 'trust' and grant access to - for example your home or work network. Unfortunately, there may be other, untrustworthy networks that you want to restrict communication with - or even block entirely.

Note: We advise new or inexperienced users to first read 'Network Zones', 'Stealth Ports Wizard' and 'Application Rules' before blocking zones using this interface.

COMODO Creating Trust Online*

Network Zones			
The following network zones are defined on this computer.			
Network Zones Blocked Zones			
Zone Name			
💼 🗉 Hotel Stale Food			
OK Cancel			

The 'Blocked Network Zones' tab allows you to:

- · Deny access to a specific network by selecting a pre-existing network zone and designating it as blocked
- · Deny access to a specific network by manually defining a new blocked zone

Note 1: You must create a zone before you can block it. There are two ways to do this;

- 1. Using 'Network Zones' to name and specify the network you want to block.
- 2. Directly from this interface using 'New blocked address...'

Note 2: You cannot reconfigure *pre-existing* network zones from this interface. (e.g., to add or modify IP addresses). You need to use 'Network Zones' if you want to change the settings of existing zones.

To deny access to a specific network by selecting a pre-existing network zone and designating it as blocked

- 1. Click the handle from the bottom center and choose 'Add' > 'Network Zones' from the options
- 2. Select the particular zone you wish to block.

	+		×		
	Add	Edit	Remo	ve	
	Netwo	rk Zones	•	Loopback Zone

IP Address(es) that are associated with the Blocked Zone You can modify these settings only under 'Network Zones' tab	Hotel Stale Food
	OK Cancel

3. Click 'OK' to confirm your choice. All traffic intended for and originating from computer or devices in this zone are now blocked.

To deny access to a specific network by manually defining a new blocked zone

1. Click the handle from the bottom center and choose 'Add' > 'New Blocked Address' from the options.

The Address dialog will appear. The 'Address' dialog allows you to select an address from the Type drop-down box shown below (*Default = Any Address*).

соморс	Address		? X
Exclude (i.e.	NOT the choise below)		
Туре:	Any Address	*	
	Any Address		
	Host Name		
	IPv4 Address Range	R	
	IPv4 Single Address	0	
	IPv4 Subnet Mask		
	IPv6 Single Address		ancel
	IPv6 Subnet Mask		
	MAC Address		

Select Address:

- 1. You can choose any IP Address by selecting Any Address in the Type drop-down box. This menu defaults to an IP range of 0.0.0.0- 255.255.255 to allow connection from all IP addresses.
- 2. You can choose a named host by selecting a Host Name which denotes your IP address.

- 3. You can choose an IPv4 Range by selecting IPv4 Address Range for example the range in your private network and entering the IP addresses in the Start Range and End Range text boxes.
- 4. You can choose a Single IPv4 address by selecting IPv4 Single Address and entering the IP address in the IP address text box, e.g., 192.168.200.113.
- You can choose IPv4 Mask by selecting IPv4 Subnet Mask. IP networks can be divided into smaller networks called sub-networks (or subnets). An IP address/ Mask is a subnet defined by IP address and mask of the network. Enter the IP address and Mask of the network.
- 6. You can choose a Single IPv6 address by selecting IPv6 Single Address and entering the IP address in the IP address text box, e.g., 3ffe:1900:4545:3:200:f8ff:fe21:67cf.
- You can choose IPv6 Mask by selecting IPv6 Subnet Mask. IP networks can be divided into smaller networks called sub-networks (or subnets). An IP address/ Mask is a subnet defined by IP address and mask of the network. Enter the IP address and Mask of the network.
- 8. You can choose a MAC Address by selecting MAC Address and entering the address in the address text box.
- Exclude (i.e. NOT the choice below): The opposite of what you specify is applicable.
- 2. Select the address to be blocked and click OK

The address(es) you blocked will appear under the 'Blocked Zones' tab. You can modify these addresses at any time by selecting the entry and clicking 'Edit'.

 Click 'OK' in 'Network Zones' interface to confirm your choice. All traffic intended for and originating from computer or devices in this zone are now blocked.

6.2.3.6. Port Sets

Port Sets are handy, predefined groupings of one or more ports that can be re-used and deployed across multiple **Application Rules** and **Global Rules**.

- The Port Sets panel enables you to view and manage pre-defined port sets and t add new port sets
- The Port Sets panel can be accessed by clicking Security Settings > Firewall > Portsets from the Advanced Tasks interface

COMODO Creating Trust Online*

COMODO Advanced	l Settings	×
General Settings 🛛 🕨	Portsets	
Security Settings 🛛 🔻	Forcets	_
► Antivirus	The following portsets are defined on this computer.	
▶ Defense+	Portset	<u>^</u>
▼ Firewall	E HTTP Ports	
👌 Firewall Settings	80	
Application Rules	443

	465	
	587	
	Privileged Ports	
	OK Cano	el

The Port Sets are displayed as a tree structure. Clicking the + button beside the port set name expand the list of ports defined in it. The default port sets shipped with Comodo Internet Security are:

- HTTP Ports: 80, 443 and 8080. These are the default ports for http traffic. Your Internet browser uses this ports to connect to the Internet and other networks.
- **POP3/SMTP Ports**: 110, 25, 143, 995, 465 and 587. These are the ports that are typically used by mail clients like Outlook Express and WinMail for communication using the POP3, SMTP and IMAP protocols.
- Privileged Ports: 0-1023. This set can be deployed if you wish to create a rule that allows or blocks access to
 the privileged port range of 0-1023. Privileged ports are so called because it is usually desirable to prevent users
 from running services on these ports. Network admins usually reserve or prohibit the use of these ports.

Defining a new Port Set

You can create new portsets and allow access to them for applications, with the access privileges specified through **Application Rule** interface. Refer to 'Creating or Modifying Firewall Rules' for more details.

To add a new portset

1. Click the handle from the bottom center of the Portsets interface and select 'Add' from the options. The 'Edit Portset' dialog will open.

COMODO Edit Portset	? 🗆 🗙
Name: Ports for Mail Client	
Ports	
OK	Cancel

- 2. Enter a name for the new portset in the Name field.
- 3. To add ports to the new portset, click the handle from the bottom center and choose Add from the 'Edit Portset' dialog.

сомодо	Port	? X			
🔲 Exclude (i.e. 1	Exclude (i.e. Not the selection below)

- 4. Specify the ports to be included in the new portset:
 - Any to choose all ports;
 - A single port Define the port number in the combo box beside;
 - A port range Enter the start and end port numbers in the respective combo boxes.
 - Exclude (i.e. NOT the choice below): The opposite of what you specify is applicable.
- 5. Click 'OK' in the 'Port' dialog. The ports will be added to the new portset in the 'Edit Portset' interface.
- 6. Click 'OK' in the 'Edit Portsets' interface to create the new portset.

Once created, a Portset can be:

• Quickly called as 'A Set of Ports' when creating or modifying a Firewall Ruleset

Description:			
Source Address	Destination Address	Source Port	Destination Port
Exclude (i.e. NOT the choise below)			
Туре:	A Set of Ports 💙		
Start Port:	HTTP Ports 🖌		
	HTTP Ports		
	POP3/SMTP Ports		
	Privileged Ports		
	Ports for Mail Client		
			OK Cancel

To edit an existing port set

- Select the portset from the 'Portsets' interface, click the handle from the bottom center and select the 'Edit' from the options to bring up the 'Edit Portset' dialog.
- The editing procedure is similar to adding the portset explained above.

6.2.4. Manage File Rating

The CIS rating system is a cloud-based file lookup service (FLS) that ascertains the reputation of files on your computer. Whenever a file is first accessed, CIS will check the file against our master whitelist and blacklists and will award it trusted status if:

- The application/file is included in the Trusted Files list;
- The application is from a vendor included in the Trusted Software Vendors list;
- The application is included in the extensive and constantly updated Comodo safelist.

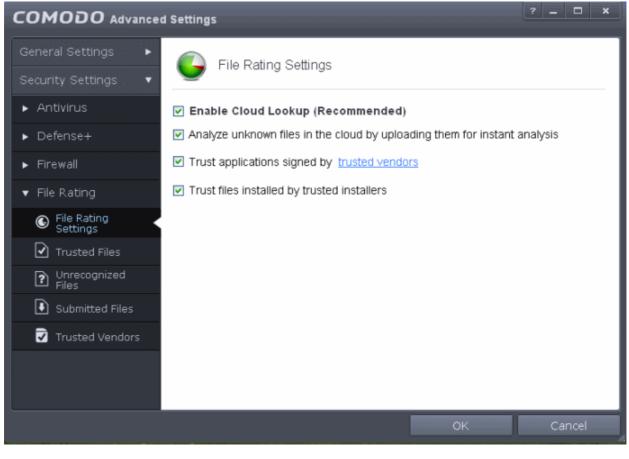

Trusted files are excluded from monitoring by HIPS - reducing hardware and software resource consumption. On the other hand, files which are identified as malicious will be added to the **Blocked Files** list and denied all access rights from other processes or users - effectively cutting them off from the rest of your system. Files which could not be recognized by the rating system are added to the list of '**Unrecognized Files**'. You can review files on the unrecognized list and manually choose to trust/block/delete them or investigate further by sending them to Comodo for analysis/running another file lookup.

The 'Manage File Rating' area allows you to view and manage the list of Trusted Files and Unrecognized Files. You can also:

- · Add files and executables to Trusted Files list manually;
- · Submit unrecognized files and view the list of files you submitted;
- View and manage Trusted Software Vendor list;

from this area.

COMODO Creating Trust Online

Click the following links to jump to the section you need help with:

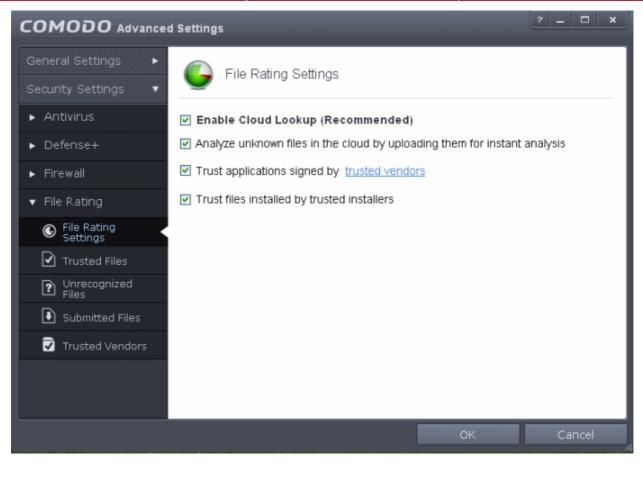

- File Rating Settings Configure settings that govern the overall behavior of file rating.
- Trusted Files View the list of trusted files and manually add files to it
- Unrecognized Files View and manage unrecognized items.
- Submitted Files View the list of files submitted for analysis to Comodo.
- Trusted Vendors View the list of trusted software vendors and manually add vendors

6.2.4.1. File Rating Settings

The File Rating Settings panel allows you to configure the overall behavior of File Rating feature of Comodo Internet Security.

• The File Rating Settings panel can be accessed by clicking Security Settings > File Rating > File Rating Settings tab from 'Advanced Settings' interface

COMODO Creating Trust Online

- Enable Cloud Lookup Allows you to enable or disable File Rating. (Default and recommended = Enabled)
- Analyze unknown files in the cloud by uploading them for instant analysis Instructs CIS to upload files whose trustworthiness could not be assessed by cloud lookup to Comodo for analysis immediately. The experts at Comodo will analyze the file and add to the the whitelist or blacklist according to the analysis. (*Default =Disabled*)
- Trust applications signed by trusted vendors When this option is enabled, CIS will award trusted status to the executables and files that are digitally signed by vendors in the Trusted Vendors list using their code signing certificates. Click the words 'trusted vendors' will open the Trusted Vendors panel. (*Default =Enabled*)
- Trust files installed by trusted installers When this option is enabled, CIS will consider the executable and files stored by applications that are assigned with Installer or Updater rule under HIPS Rules or the applications. (*Default* =*Enabled*)

6.2.4.2. Trusted Files

Files added to the Trusted Files list are automatically given Defense+ trusted status. If an executable is unknown to the Defense+ safe list then, ordinarily, it and all its active components generate HIPS alerts when they run. Of course, you could choose the 'Treat this as a Trusted Application' option at the alert but it is often more convenient to classify entire directories of files as 'Trusted Files'.

CIS allows you to define a personal safe list of files to complement the default Comodo safe list.

By adding executables to this list (including sub folders containing many components) you can reduce the amount of alerts that HIPS generates whilst maintaining a higher level of Defense+ security. This is particularly useful for developers that are creating new applications that, by their nature, are as yet unknown to the Comodo safe list. Files can be transferred into this module by clicking the 'Move to' button in the 'Unrecognized Files' area.

 The Trusted Files panel can be accessed by clicking Security Settings > File Rating > Trusted Files from the Advanced Tasks interface

COMODO Creating Trust Online*

General Settings 🔹 🕨	Trusted Files

	🔲 🍗 c:\program files\comodo\ccme	Apache Software Foundation	

You can use the search option to find a specific item in the list.

To use the search option, click the search icon at the far right in the column header.

- Click the chevron on the left side of the column header and select the search criteria from the drop-down.
- Enter partly or fully the name of the item as per the selected criteria in the search field.
- Click the right or left arrow at the far right of the column header to begin the search.
- Click the 🗮 icon in the search field to close the search option.

Clicking the handle at the bottom center of the panel opens the following options:

C:Y	MINDOWS	S\system?	• 9XR		Mi
🗖 C:	+	+	×	Ð	Mi
🚨 c:	Add	Move to	Remove	Purge	Mi

- · Add Allows you to add files to Trusted Files list manually
- Move Allows you to move files from Trusted Files list to Blocked Files or Unrecognized Files list
- Remove Allows you to remove files from Trusted Files list
- **Purge** Runs a system check to verify that all the files listed are actually installed on the host machine at the path specified. If not, the file is removed, or 'purged', from the list.

Adding files to Trusted Files list

CIS allows you to add files and executables to the list of Trusted Files so that those files will be given Trusted status. For the files added manually, it generates a hash or a digest of the file using a pre-defined algorithm and saves in its database. On access to any file, its digest is created instantly and compared against the list of stored hashes to decide on whether the file has 'Trusted' status. By this way, even if the file name is changed later, it will retain its Trusted status as the hash remains same. However you can also add files by their file names, but if you happen to change the file name later, it looses its 'Trusted' status.

To add new file(s) to Trusted Files list

Click the handle from the bottom center and choose 'Add'

C:V	+ + × • • • • • • • • • • • • • • • • •	ſ
	Files	
	Folders OK Cancel	
	Running Processes	

You can add files to the Trusted Files list by three ways:

- Files Allows you to navigate to the file or executable of the program you wish to add.
- Folders Allows you to navigate to the folder you wish to add. All the files in the folder will be added to the 'Trusted Files' list.
- Running Processes Allows you to select a currently running process. On selecting a process, the parent
 application, which invoked the process will be added to 'Trusted Files' list.
- Click OK for your changes to take effect.

To move an included entry to Unrecognized Files or Blocked Files

- Select the entry to be transferred *out* of the 'Trusted Files' list into either Unrecognized Files or Blocked Files. You can select several entries to be moved at once by marking the check-boxes beside the entries.
- Click the handle from the bottom center and choose 'Move'

- Choose 'Unrecognized Files' or 'Blocked Files' from the drop-down.
- Click OK for your changes to take effect.

To remove an included entry from the Trusted Files list

- Select the entry to be removed from the 'Trusted Files' list. You can select several entries to be removed at once by marking the check-boxes beside the entries.
- Click the handle from the bottom center and choose 'Remove'. The file is only removed from the list and not deleted from your system.
- Click OK for your changes to take effect.

6.2.4.3. Unrecognized Files

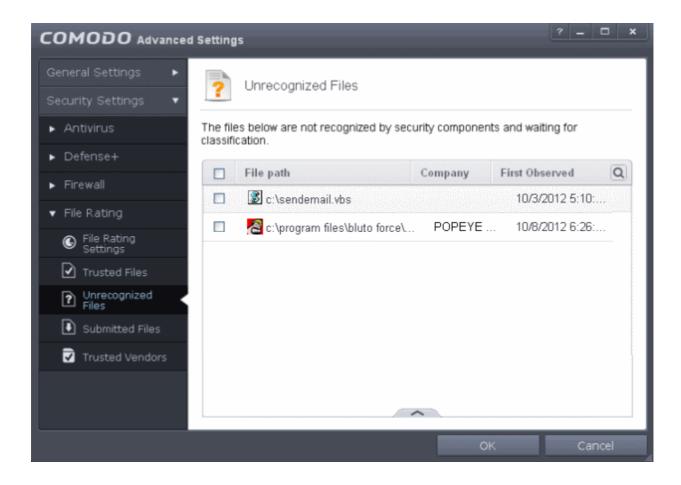

Once installed, the HIPS watches all file system activity on your computer. Every new executable file introduced to the computer, is first scanned against the Comodo certified safe files database. If they are not safe, they are added to the 'Unrecognized Files' for users to review and possibly submit to Comodo. Apart from new executables, any executables that are modified are also moved to the 'Unrecognized Files' area.

'Unrecognized Files' is specifically important while HIPS is in 'Clean PC Mode'. In Clean PC Mode, the files in 'Unrecognized Files' are NOT considered clean. For more information, please check 'Clean PC Mode' on the HIPS settings page.

The 'Unrecognized Files' panel displays the list of files added as Unrecognized Files and allows you to assess the pending files to determine whether or not they are to be trusted. If they are trustworthy, they can be moved to 'Trusted Files' using the 'Move to' button. Similarly, files that are suspicious can be moved to the 'Blocked Files' area.

You can also add files upon which you are suspicious into 'Unrecognized Files' list to check whether the master Comodo safe list contains more information on them or to submit the files to Comodo for analysis. Experts at Comodo will analyze the files and add them to global white-list or black-list accordingly.

• The Unrecognized Files panel can be accessed by clicking Security Settings > File Rating > Unrecognized Files tab from the Advanced Tasks interface.

You can use the search option to find a specific item in the list.

To use the search option, click the search icon at the far right in the column header.

Refresh - Reloads the list to add items that are submitted recently

6.2.4.5. Trusted Vendors List

In Comodo Internet Security, there are two basic methods in which an application can be treated as safe. Either it has to be part of the 'Safe List' (of executables/software that is known to be safe) OR that application has to be signed by one of the vendors in the 'Trusted Software Vendor List'.

From this point:

.

- IF the vendor is on the Trusted Software Vendor List AND the user has enabled 'Trust Applications signed by Trusted Vendors' in the File rating Settings panel, THEN the application will be trusted and allowed to run.
- IF the vendor is not on the Trusted Software Vendor List OR the user has not enabled 'Trust Applications signed by Trusted Vendors' THEN the application will be sandboxed. If the application in question is an installer then CIS will generate an elevated privilege alert.

Software publishers may be interested to know that they can have their signatures added, free of charge, to the 'master' Trusted Software Vendor List that ships to all users with CIS. Details about this can be found at the foot of this page.

The 'Trusted Software Vendors' panel can be opened by clicking Security Settings > File Rating > Trusted Vendors.

	Settings		_ □	×

Click the X icon in the search field to close the search option.

Click here to read background information on digitally signing software

Click here to learn how to Add / Define a user-trusted vendor

Software Vendors - click here to find out about getting your software added to the list

Background

Many software vendors digitally sign their software with a code signing certificate. This practice helps end-users to verify:

- i. Content Source: The software they are downloading and are about to install really comes from the publisher that signed it.
- ii. Content Integrity: That the software they are downloading and are about to install has not be modified or corrupted since it was signed.

In short, users benefit if software is digitally signed because they know who published the software and that the code hasn't been tampered with - that are are downloading and installing the genuine software.

The 'Vendors' that digitally sign the software to attest to it's probity are the software publishers. These are the company names you see listed in the first column in the graphic above.

However, companies can't just 'sign' their own software and expect it to be trusted. This is why each code signing certificate is counter-signed by an organization called a 'Trusted Certificate Authority'. 'Comodo CA Limited' and 'Verisign' are two examples of a Trusted CA's and are authorized to counter-sign 3rd party software. This counter-signature is critical to the trust process and a Trusted CA only counter-signs a vendor's certificate after it has conducted detailed checks that the vendor is a legitimate company.

If a file is signed by a Trusted Software Vendor and the user has enabled 'Trust Applications that are digitally signed by Trusted Software Vendors' then it will be automatically trusted by Comodo Internet Security (if you would like to read more about code signing certificates, see http://www.instantssl.com/code-signing/).

One way of telling whether an executable file has been digitally signed is checking the properties of the .exe file in question. For example, the main program executable for Comodo Internet Security is called 'cis.exe' and has been digitally signed.

- Browse to the (default) installation directory of Comodo Internet Security.
- Right click on the file cis.exe.
- Select 'Properties' from the menu.
- Click the tab 'Digital Signatures (if there is no such tab then the software has not been signed).

This displays the name of the CA that signed the software as shown below:

cis Properties	? 🗙
General Version Compatibility Digital Signatures Summary	
Signature list Name of signer: E-mail address: Timestamp	
Comodo Security ca@comodo.com Saturday, September	
Details	

Click the 'Details' button to view digital signature information. Click 'View Certificate' to inspect the actual code signing certificate. (see below).

Digital Signature Details	Certificate

Countersignatures Name of signer: E-mail address: Timestamp	Issued by: COMODO Code Signing CA 2
COMODO Time S Not available Saturday, Septembe	Valid from 6/14/2012 to 6/15/2013
Details	Install Certificate) Issuer Statement
ОК	ОК

It should be noted that the example above is a special case in that Comodo, as creator of 'cis.exe', is both the signer of the software and, as a trusted CA, it is also the counter-signer (see the 'Countersignatures' box). In the vast majority of cases, the signer or the certificate (the vendor) and the counter-signer (the Trusted CA) are different. See this example for more details.

Adding and Defining a User-Trusted Vendor

A software vendor can be added to the local 'Trusted Software Vendors' list in two ways:

- By reading the vendor's signature from an executable file on your local drive
- · By reading the vendor's signature from an running process

To add a trusted vendor by reading the vendor's signature from an executable

• Click the handle from the bottom center and choose 'Add' > 'Read from a signed executable'

Equiom Inc	~	
	Add Remove	
	Read from a signed executable Read from a running proces	Cancel

• Browse to the location of the executable your local drive. In the example below, we are adding the executable 'YahooMessenger.exe'.

? × Open 🕝 🤣 📂 🖽 -¥ Look in: 🛅 Messenger 👏 rmc_audio.dll 👏 id3lib.dll 👏 YHTTP.d 🚞 Cache 🖺 INSTALL 4 👏 rmc_video.dll 👏 YImage. 🛅 logs My Recent 🔊]intl 🖬 sb 👏 YIniDom. 🚞 Media Documents 🖹 sb 🚞 resources 👏 kdu_v32R.dll 👏 ylog.dll 🚞 skins 🖹 langpacks StartWrapper 👏 ymdm_ai 👿 avthost 🗐 tos 👏 libexpat.dll 👏 ymdm_vi WWISE 🔊 ConnectionWizard.dll 國 login 👏 Yml.dll Desktop 👏 core_video.dll 🖆 modules 👏 ymsdk.dl 👏 yacscom.dll 🔊 default 👏 nspr4.dll 👏 ymsglite. 👏 yacsui.dll 🔟 filter1.enc 👏 pcre.dll 🝟 YahooMessenger 🗂 Ymsgr_tr 🔊 fifi_bg 🖄 PhotoShare.dll 👏 yalertcenterM.dll 👏 YPagerC My Documents 🔊 ft60.dll 👏 YCPFoundation.dll 🔟 Pluginkey_pub.pem 👏 ypagerp: 🔊 RGX.dll 👏 YCPSSL.dll 👏 YPluginR 😄 generic_messenger < > My Computer File name: YahooMessenger ¥ Open Files of type: All files (*.*) Cancel 🔝 Open as read-only My Network

On clicking 'Open', Comodo Internet Security checks that the .exe file is signed by the vendor and counter-signed by a Trusted CA. If so, the vendor (software signer) is added to the Trusted Vendor list (TVL):

COMODO Creating Trust Online

In the example above, Comodo Internet Security was able to verify and trust the vendor signature on YahooMessenger.exe because it had been counter-signed by the trusted CA 'Symantec'. The software signer 'Yahoo! Inc.' is now a Trusted Software Vendor and is added to the list. All future software that is signed by the vendor 'Yahoo! Inc.' is automatically added to the Comodo Trusted Vendor list UNLESS you change this setting in File Rating Settings.

To add a trusted vendor from a currently running process

· Click the handle from the bottom center and choose 'Add' > 'Read from a running process'

Equiom Inc		
	+ ×	
	Add Remove	~
	Read from a signed executable	
	Read from a running process

Comodo Internet Security performs the same certificate check as described above. If the parent application of the selected process is signed, CIS adds the vendor to the Trusted Software Vendors list.

If Comodo Internet Security cannot verify that the software certificate is signed by a Trusted CA then it does not add the software vendor to the list of 'Trusted Vendors'. In this case, you can see the following error message.

Note: The 'Trusted Software Vendors' list displays two types of software vendors:

- User defined trusted software vendors As the name suggests, these are added by the user via one of the two
 methods outlined earlier. These vendors can be removed by the user by selecting and clicking the 'Remove'
 button.
- Comodo defined trusted software vendors These are the vendors that Comodo, in it's capacity as a Trusted CA, has independently validated as legitimate companies. If the user needs to remove any of these vendors from the list, it can be done by selecting the vendor, clicking 'Remove' and restarting the system. Please note that the removal will take effect only on restarting the system.

The Trusted Vendor Program for Software Developers

Software vendors can have their software added to the default Trusted Vendor List that is shipped with Comodo Internet Security. This service is free of cost and is also open to vendors that have used code signing certificates from any Certificate Authority. Upon adding the software to the Trusted Vendor list, CIS automatically trusts the software and does not generate any warnings or alerts on installation or use of the software.

The vendors have to apply for inclusion in the Trusted Vendors list through the sign-up form at http://internetsecurity.comodo.com/trustedvendor/signup.php and make sure that the software can be downloaded by our technicians. Our technicians check whether:

- The software is signed with a valid code signing certificate from a trusted CA;
- The software does not contain any threats that harm a user's PC;

before adding it to the default Trusted Vendor list of the next release of CIS.

More details are available at http://internetsecurity.comodo.com/trustedvendor/overview.php.

7.Comodo GeekBuddy

Comodo GeekBuddy is a personalized computer support service provided by friendly computer experts at Comodo. If you experience any issues at all with your computer, simply click the GeekBuddy icon to establish a chat session with one of our technicians.

After requesting your permission, they'll establish a remote connection to your PC and fix the problems right in front of your eyes. No longer do you need to make time consuming calls to impatient help desk support staff. Instead, just sit back and relax while our friendly technicians do the work for you.

Visit http://www.geekbuddy.com/ for more details.

One of the great features of the CIS interface is that you can immediately launch a chat with a qualified computer support

technician by clicking the icon at the top-right of the CIS interface. If you have opted not to include GeekBuddy during

CIS installation, then you can download and install GeekBuddy by clicking this icon or by clicking 'Help icon > Support > Get Live Support.

GeekBuddy is included with CIS Pro and Complete versions and is available with CIS Premium. The GeekBuddy section of this guide is broken down into the following sections:

- Overview of the Services
- Activation of Service
- Launching the Client and Using the Service
- Accepting Remote Desktop Requests
- Chat History
- Using Issue Tracker
- Uninstalling Comodo GeekBuddy

7.1. Overview of Services

Comodo GeekBuddy includes the following services:

- Virus & Malware Removal Our technicians remotely clear any detected viruses or malware that is found on your PC.
- Internet and Online Identity Security Optimization of your computer's security settings to prevent loss of sensitive data and identity theft.
- Printer or Email Account Setup Installation or updating of printer software and/or drivers, checking ink levels and configuring your printer to work on a wireless or wired network. We set up your Internet-based email account - any provider, any account. Great for new computers and novice email users.
- Software Activation Installation, configuration, and activation of third party software in your system.
- General PC Troubleshooting Detailed system check to identify and eliminate basic hardware and software conflicts in your Windows PC.
- **Computer Power Setting Optimization** Optimization of your power management settings based on how you use your computer. Your Geek will help you go green and save money on your electric bill.
- Comodo Software Installation and Set up Installation and support of software supplied by Comodo.
- Comodo Account Questions Clarification of any doubts regarding your account in Comodo.

7.2. Activation of Service

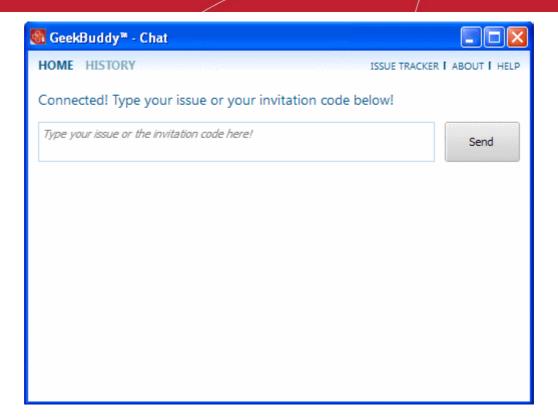

GeekBuddy is included in CIS Pro and Complete versions and users who purchased either of these CIS versions can skip this section and move on to the next section 'Launching the Client and Using the Service'. GeekBuddy client is downloaded along with CIS Premium (a free version) with a trial license, but to use the full service, you have to purchase and activate it.

Start the GeekBuddy client by clicking the desktop shortcut icon

or from the 'Start Menu'.

The GeekBuddy Chat screen will be displayed.

COMODO Creating Trust Online*

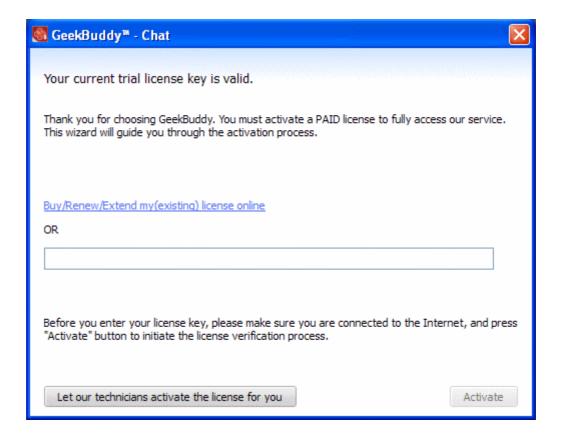

• Click the 'About' link at the top far right of the screen.

The About GeekBuddy screen will be displayed.

```

сомодо **Creating Trust Online**

- Enter the name and email details in the respective fields. •
- Click 'Continue'.

The home page of GeekBuddy will be displayed. Now you can start using it and seek the help of an expert to resolve your computer problems.

Click the following links for more details on how to start and using them:

- Launching the Client and Using the Service
- **Using Issue Tracker**

7.3. Launching the Client and Using the Service

The GeekBuddy client required for the services is installed in your system automatically along with CIS Pro and Complete. For CIS Premium, it is installed automatically if you have selected the option Install Comodo GeekBuddy during installation .

You can start the client and start a live chat session with a GeekBuddy expert using any one of the following methods:

Double click the GeekBuddy desktop icon

right side of the main interface.

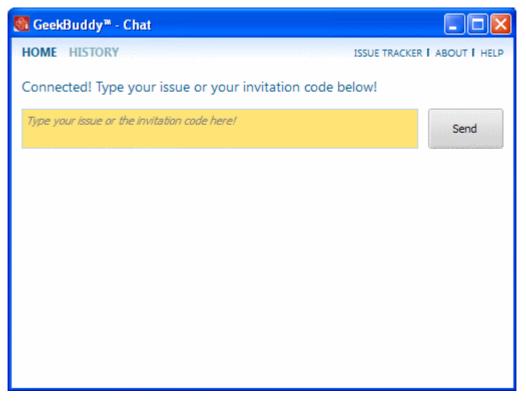

- icon in the title bar controls at the top Launch a chat with a qualified computer support technician by clicking this
- Launch a chat with a qualified computer support technician by clicking Help > Support > Get Live Support at the top right side of the main interface

 Launch the GeekBuddy client directly from the Windows Start Menu - Click Start > All Programs > Comodo > GeekBuddy > GeekBuddy.

The GeekBuddy Home screen will open.

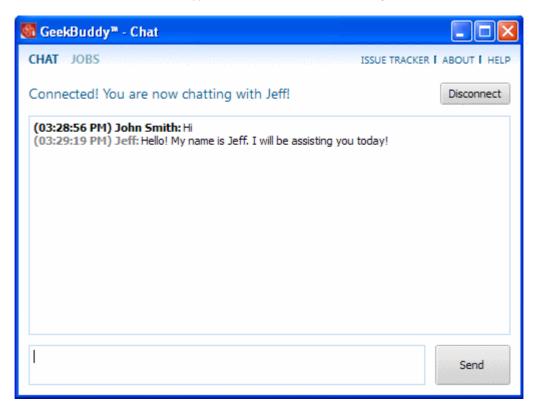

• To contact a support technician, type your issue in the field or enter the invitation code if you have it and click the 'Send' button.

You will be connected to a GeekBuddy...

...and once the connection is established, our support technician will initiate a chat with you.

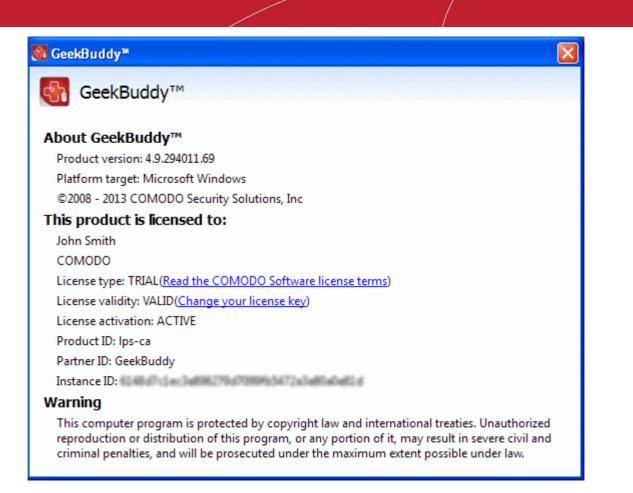

- Proceed to chat now.
- Explain your problem. The technician will assess your problem with you and work with you to fix any issues.

About GeekBuddy

• Click the 'About' link at the top far right of the screen.

The About GeekBuddy information screen will be displayed.

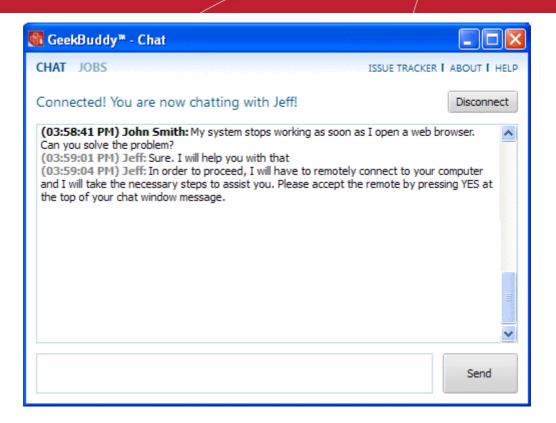

The 'About' dialog displays the copyright and product version information. The screen also displays information about the licensee, its validity and to change the license key or activate the account.

7.4. Accepting Remote Desktop Requests

In order to solve certain issues, the support technician may need to directly connect to your computer via aremote connection. Remote control can only go ahead if you grant permission for this to happen. Our technicians will always request your permission via the chat window.

COMODO Creating Trust Online

COMODO Creating Trust Online*

The technician will ask your permission before he or she makes any changes to your machine. Such changes might include installing programs, creating system restore points or deleting unnecessary or infected files.

	Send

• Click the 'Disconnect' button and confirm it in the next screen to end the session with our GeekBuddy.

Congratulations, you just finished your first GeekBuddy support session. We hope you enjoy using your trouble-free computer.

7.5. Chat History

GeekBuddy keeps a local record of every chat session you have with a Comodo technician. Clicking the 'History' link at the top

of the interface will display all chat sessions that you had with our technician. This helps you keep track of previous computer issues and chats and can be useful as a reference when trying to fix future issues.

To view history of chat sessions

• Click the 'History' link at the top of the interface.

All the sessions will be displayed.

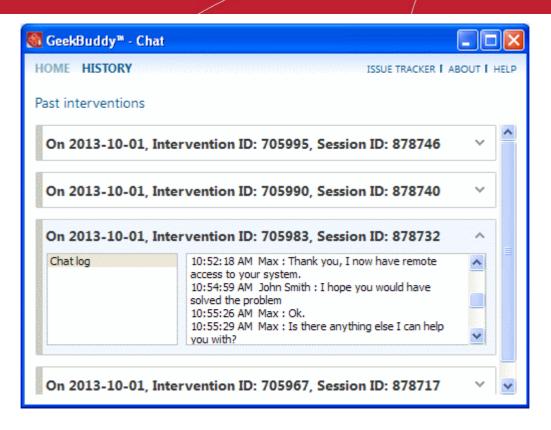

🍓 GeekBuddy** - Chat 📃 🗖 🔀

On 2013-10-01, Intervention ID: 705967, Session ID: 878717 ×

 Click on the arrow button at the far end of the session history box that you want to view or double-click anywhere on the box.

The chat session that you had with our technician will be displayed on the right side.

COMODO Creating Trust Online*

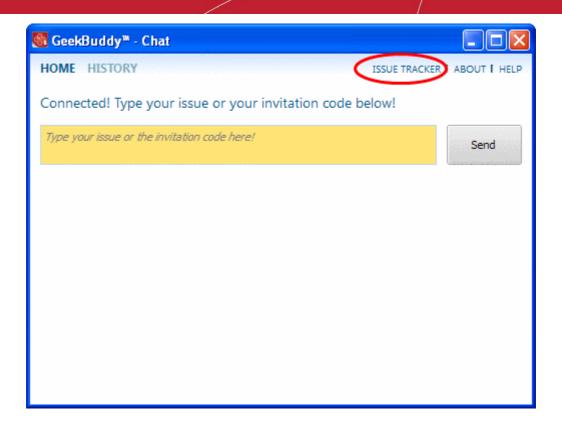

Similarly you can view the chat history of other sessions also.

7.6. Using Issue Tracker

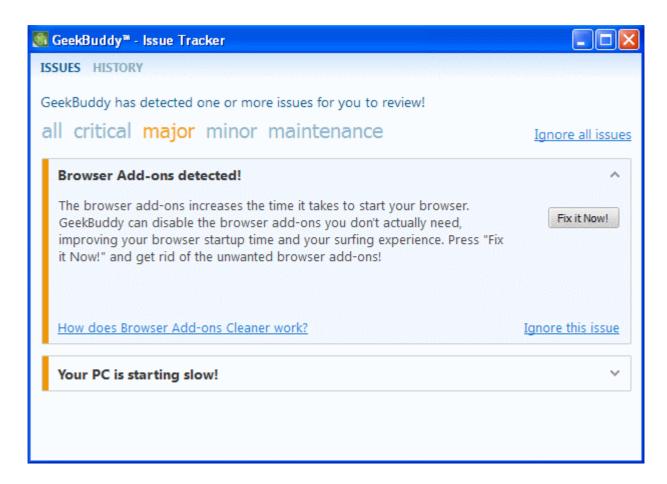

Issue Tracker helps you maintain the security and efficiency of your computer by automatically identifying problems on your computer and helping you to fix them. For example, Issue Tracker will alert you if you have too many startup programs/services (can cause computer slow down); an inefficient registry (can also cause slow down and crashes) or your hard drive contains files that might compromise your privacy. In many cases you will be presented with a simple wizard that will allow you to deal with the issue quickly and easily. If the problem is beyond the scope of Issuer Tracker, you will be offered the opportunity to contact a GeekBuddy representative who will help resolve the issues.

To start the Issue Tracker, click the 'Issue Tracker' link on the right top in the user interface.

COMODO Creating Trust Online

The Issue Tracker interface will list the problems that it has detected.

Popup Alert

At the time of starting your computer, Issue Tracker will detect problems in your system and provide an alert at the bottom right

side of the screen.

• Click the Fix issues to open the Issue Tracker interface.

The Issue Tracker interface will list the problems that it has detected.

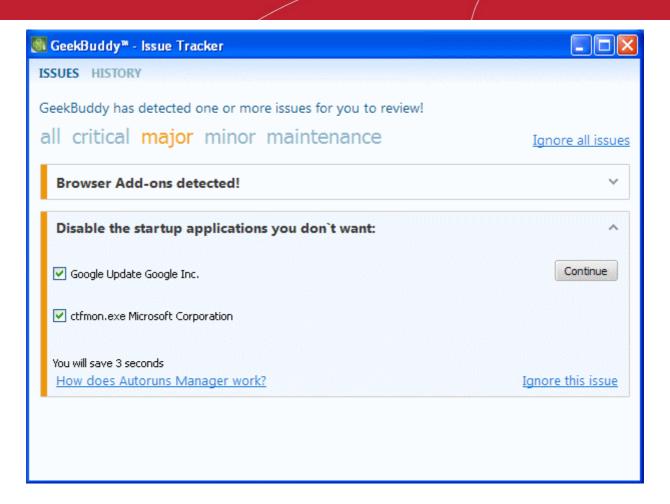

The problems detected will be categorized as critical, major, minor and maintenance issues. Click on the relevant link to view the problem. Clicking the 'Show all issues' link will display all the problems in your computer and the color code at the left of each issue indicates the category of the issue.

S. No.	Issue	Color Code
1	Critical	Red
2	Major	Orange
3	Minor	Yellow
4	Maintenance	Blue

Some of the common problems that occur in any computer are junk registry entries, slow bootup time and the presence of files that might compromise your privacy.

Each issue discovered will be accompanied with a 'Fix it Now' button. For example, for the issue of slow bootup time, clicking this button will display a list of startup programs in your system (programs which are automatically loaded during Windows startup and will running in the background). You can identify the programs you do not want to run at start-up and disable them. Doing so will save system resources and improve the performance of your computer.

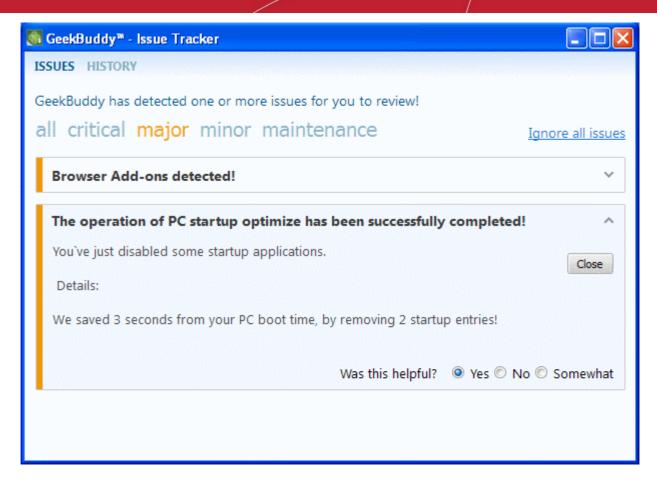

COMODO Creating Trust Online

• Select the programs that you want to disable during startup and click the 'Continue' button.

The selected programs will be disabled and the successfully completed screen will be displayed.

COMODO Creating Trust Online*

Provide your feedback at the bottom of the interface and click the 'Close' button.

For some of the issues listed, you have to seek the help of an expert technician.

- Click 'Ignore all issues' link to disregard all the issues in your system displayed by Issue Tracker.
- Click 'Ignore this issue' beside a particular entry to disregard that problem.
- Click 'History' link at the top of the interface to view the actions taken for the problems.
- Click the 'Fix it Now!' button beside an issue to resolve it.

7.7. Uninstalling Comodo GeekBuddy

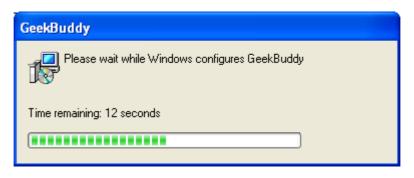

To uninstall Comodo GeekBuddy

- Click Start > Control Panel
- In the Control Panel, double-click Add/Remove Programs
- In the list of currently installed programs, click GeekBuddy
- Click the 'Change/Remove' button.

Add or Remove Programs		
?	Are you sure you want to remove GeekBuddy from your computer?	
	Yes No	

Click 'Yes' to confirm uninstallation.

The progress of GeekBuddy removal will be displayed...

---and after a few minutes the uninstallation will be complete.

8. TrustConnect Overview

Comodo TrustConnect is a secure Internet proxy service that creates an encrypted session when users are accessing the Internet over public wireless connections. Since these wireless sessions can be relatively easily intercepted, they present a significant data vulnerability gap for businesses and consumers alike. Whenever Comodo Internet Security detects unsecured wireless connections it will present you with the opportunity to use your TrustConnect account for the connection.

сомо	DO Network Detected	?	
	Warning! Your computer has joined an unsecured wireless network! Network: Wireless: 192.168.43.24/24		
In an unse same net	ecured wireless network, your communication is visible to everyone in t twork	he	
	Secure communication with TrustConnect Choose if you want to use TrustConnect to encrypt your traffic between you and the Internet		
	Continue Unsecured Choose if you do not wish to use TrustConnect to encrypt your traffic between you and the Internet		
🗖 Do not	show this alert again		

TrustConnect is designed to eliminate these types of data hijacks by preventing criminals from attacking or scanning your system from the local network that you are using to connect to the Internet. It also encrypts all of your traffic destined for the Internet (including Web site addresses, instant messaging conversations, personal information, plain text usernames and passwords and other important information). After connecting to the service, the TrustConnect software indicates that traffic is being encrypted as it leaves your system. Data thieves and hackers cannot 'sniff' or intercept your data - they can't even determine where your information is coming from because, as you are connecting to the Internet through a SSL secured VPN connection to the TrustConnect servers, your requests appear to come from our IP address. Ordinarily, cyber criminals could easily intercept these broadcasts.

Setting up Comodo TrustConnect is easy, as it works on most operating systems (Windows, Mac OS X) as well as with most firewall applications. Typical setup takes less than three minutes. TrustConnect clients are available for Windows, Mac OS, Linux

iPhone devices mobile downloaded and and can be by logging into your account at https://accounts.comodo.com/account/login. Your Comodo Internet Security Complete confirmation email contains confirmation of your the username that you set up during initial sign up and a subscription ID for the service. Once logged in, click the TrustConnect tab to add subscriptions, change billing and contact information, and review the ongoing status of your service. Your Comodo Internet Security Complete TrustConnect account has a 10 GB/month data transfer limit.

Comodo Internet Security - Complete customers also receive the \$99 value 'Live, Expert Computer Support' Comodo GeekBuddy. Please visit http://www.geekbuddy.com for full product details.

TrustConnect System Requirements

- Windows Vista
- Windows XP
- Mac OS X
- Linux (containing kernel 2.4 or later)
- FreeBSD, OpenBSD

For users of Comodo Internet Security, TrustConnect is integrated with the application and need not install the TC client in their systems.

Comodo Internet Security Complete Users

CIS Complete product includes TrustConnect service and the application is installed automatically along with CIS. When a new wireless connection is established by your system, a Network Detected dialog will be displayed.

сомо	DO Network Detected	?
	Join a New Network Vireless: 192.168.43.24/24	
Please sel	lect your location:	
	I am at Home Choose if you are at home and have just connected your computer to a local network	
	I am at Work Choose if you are at work place and have just connected your computer to a local network	
	I am at a Public Place Choose this option if you are at public place such as a coffee shop, hotel or school etc.	
🔲 Do not	detect new networks again	

Select your location from the dialog

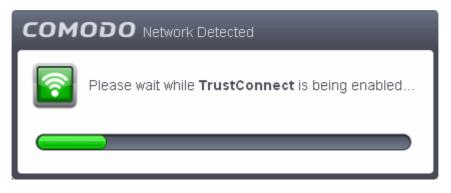

A TrustConnect alert will be displayed depending on the settings configured in Firewall Behavior Settings interface.

COMODO Network Detected		
Y	Varning! our computer has joined an unsecured wireless network! etwork: Wireless: 192.168.43.24/24	
In an unse same netv	cured wireless network, your communication is visible to everyone in the work	
	Secure communication with TrustConnect Choose if you want to use TrustConnect to encrypt your traffic between you and the Internet	
	Continue Unsecured Choose if you do not wish to use TrustConnect to encrypt your traffic between you and the Internet	
🔲 Do not :	show this alert again	

Select whether you want to connect to the Internet via TrustConnect thus encrypting the traffic between your system and the Internet or use the unsecured network.

If you choose 'Secure communication with TrustConnect', CIS will establish the connection via TC...

...and on successful connection, you can view the details in the system tray.

Choose 'Continue Unsecured' option if you do not want to establish an encrypted connection.

Comodo Internet Security Pro / Premium Users

TrustConnect service is not included with CIS Pro / Premium and these users should subscribe for using the service. When the option 'Secure communication with TrustConnect is selected, a 'Activate TrustConnect' dialog will be displayed.

COMODO Creating Trust Online*

🐉 start			🥝 Uninstall Comodo Dragon

From the Destop Icon:

• Double Click on the Comodo Dragon Desktop icon created during the installation:

9.1. Introduction to PrivDog

What would be your reaction if you knew that almost all your online activity was tracked by multiple agencies without your knowledge? The data they collect might be used for legitimate but unwelcome reasons such as adverts that follow you around the internet or for creating a profile of your online browsing activity. In the worst cases, it could be used by online fraudsters with the sole objective of stealing your personal and confidential information by deploying intelligence gathering cookies, spyware and other malware.

PrivDog provides you the power to control these activities and make surfing the web safe and private again. PrivDog is a browser extension that improves the transparency, privacy and speed of your online experience by automatically detecting and blocking processes that are attempting to track your online activity. Whenever you visit a website, PrivDog will display the number of privacy threats it has blocked in the top-right corner of your browser. Clicking the PrivDog icon will reveal a more detailed breakdown of the types of threats it has stopped, which can include advertising networks, 3rd party trackers, cookies, widgets and other data collection processes. The extension can also block all current banner ads in a webpage and replace them with safe and trusted ads.

You can install PrivDog while installing Comodo Internet Security or by downloading the app from www.privdog.com/downloads.html. The supported browsers for PrivDog include Comodo Dragon, Comodo IceDragon, Google Chrome and Mozilla Firefox.

9.1.1. Using PrivDog

• The total number of potential threats on the page you are visiting will be overlaid over the PrivDog icon at the topright corner of the browser. Click the icon to reveal a breakdown of current activity by threat-type.

- 🗆 X $\square \times$ ~ Π. ъ &g=ear+phones+for+Google+nexus& 🖈 2.6 +phones+for+Google+nexus& 🖈 20 OD n **∖i∨doc** ø ivdoc Ò Regi 69 This site is NOT in your exceptions. This site is NOT in your exceptions. 7 threats were found on this page 7 threats were found on this page. - Do not track When this option is enabled, PrivDog will block the tracking activities of 3rd party cookies that are already installed.

Comodo Dragon Help

Comodo Dragon's intuitive multi-tabbed interface enables easy and fast access to sophisticated features of the browser. Please refer to the Comodo Dragon online help guide at http://help.comodo.com/topic-120-1-279-2524-Comodo-Dragon----Introduction.html for more details on using the browser.

10. Comodo BackUp

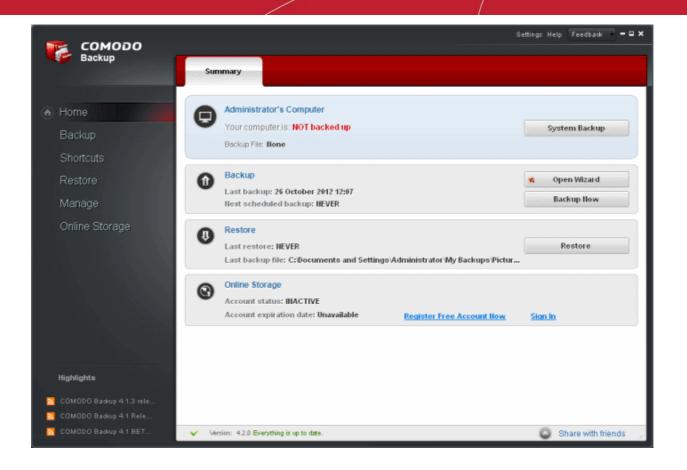

Comodo BackUp is a powerful and easy to use desktop application that helps home and business users protect their valuable data against damage or loss.

The application's streamlined design and task orientated architecture means even novice users can learn how to create, run and restore their first backup job in a matter of minutes. Other features include full scheduling, password protection, a backup integrity checker and a range of preset backup jobs that allow you to quickly create copies of important data sets such as the Windows Registry, mail accounts and user settings.

Comodo BackUp is also seamlessly integrated to Windows Explorer so that you can just select the folders or files you want to back up, right click on them and quick start the Back Up wizard.

- Comodo Backup Features
- Starting Comodo Backup
- Comodo Backup Help

COMODO Creating Trust Online*

Comodo Backup Features and Benefits

- Quick backup of entire drives or individual files or folders to your local computer, network drive, FTP server or Comodo's online server.
- Step by step wizards to guide even novice users through the entire backup, restore and scheduling procedures.
- Flexible storage options allow you to specify full, incremental or differential backups.
- Protection of invaluable personal and business data from loss or corruption.
- Quick recovery of files with a few clicks of the mouse.
- Granular scheduling options to take automatic backups at a time that suits you.
- Real-time backups synchronization feature to get your files copied over as soon as you save them.
- Built in checker to confirm the integrity of your backup files before committing to a restore.
- Backup presets including mail folders, windows registry, messenger archives and master boot records.
- Powerful encryption options to protect your files so that it cannot be accessed by anyone but you.
- Comodo Cloud onlinefile storage service. Backup your files to a highly secure online storage which can also be mounted as a virtual drive in your system.
- Command line and scripting support to automate the online backup and restore operations.

Starting Comodo Backup

From the Start Menu

Comodo Backup Help

Comodo BackUp's streamlined interface provides fingertip access and control over all functional areas of the software. Please refer to the Comodo Backup online help guide at http://help.comodo.com/topic-9-1-455-4910-Comodo-BackUp-Introduction.html for more details on using the product.

Appendix 1 - CIS How to... Tutorials

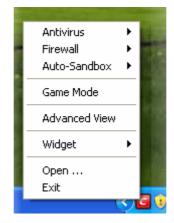

The 'How To...' section of the guide contains guidance on key tasks of Comodo Internet Security. Use the links below to go to each tutorial's page.

How to...:

- Enable / Disable AV, Firewall and Auto-Sandbox Easily Guidance on changing the current enabled/disabled states of Antivirus, Firewall and Defense+.
- Setup the Firewall for maximum security and usability A brief outline of the setting up a secure connection to Internet
- Block Internet Access while allowing local network (LAN) Access guidance on configuring the Firewall to allow only Intranet or LAN connection and to block Internet connection
- Setup HIPS for maximum security and usability A brief outline of how to set Host intrusion Protection for the optimum balance between security and usability
- Setup Behavior Blocker for maximum security and usability A brief outline of how to set Behavior Blocker for the maximum security against untrusted applications
- · Password protect your CIS settings Explains how to protect your CIS settings
- Reset a Forgotten Password (Advanced) Explains how to create a new password for CIS
- Run an instant Antivirus scan on selected items Guidance on initiating a manual scan on selected folders/files to check for viruses and other malware.
- Create an Antivirus scanning schedule Guidance on time-table scheduling of antivirus scans to be run on selected items at selected intervals
- Run an untrusted program inside sandbox Guidance on executing a program that you do not trust to be safe, inside sandbox to protect any harmful effects of the program upon your system.
- Run Browsers inside Sandbox Guidance on running your browser, inside sandbox when you plan to visit untrusted websites.
- Run Untrusted Programs inside Virtual Kiosk Guidance on executing a program that you do not trust to be safe, inside the virtual kiosk.
- Run Browsers Inside the Virtual Kiosk Guidance on running your browser, inside virtual kiosk when you plan to do
 online banking, online shopping and so on.
- Restore incorrectly quarantined item(s) Help to restore files and executables that were moved to quarantine by
 mistake
- Submit quarantined items to Comodo for analysis Advice on how to send suspicious files/executables to Comodo for analysis
- Enable file sharing applications like BitTorrent and Emule Explains how to configure Comodo Firewall for file sharing through popular software
- Block any downloads of a specific file type Explains how to configure Defense+ to block downloads of files of a specific type
- Selectively disable Behavior Blocker and Auto-Sandboxing for specific files Explains how to exclude specific files or file types from the auto-sandboxing process
- Switch between complete CIS suite and individual components (just AV or FW) Explains how to uninstall or install Firewall or Antivirus components after installation.
- Switch Off Automatic Antivirus and Software Updates Explains how to stop automatic software and virus updates
- Temporarily suppress alerts when playing games Helps you to switch off CIS pop-up alerts to avoid interruptions while playing games
- Renew or upgrade your license Explains how to renew or upgrade your license

Enabling / Disabling AV, Firewall and Auto-Sandbox Easily

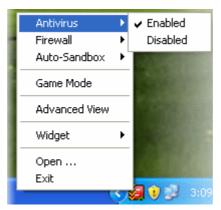

Comodo Internet Security allows users to quickly switch the Enabled/Disabled states of Antivirus, Firewall and Auto-Sandbox by right clicking on the system tray icon (the CIS interface should be in Compact View).

Antivirus

To enable/disable the Antivirus

- 1. Right click on the system tray icon keeping the CIS interface in Compact View.
- 2. Move the mouse cursor over 'Antivirus'

3. Choose 'Enabled or Disabled' as per your choice

You can find the set security level also from the Home Screen.

Firewall

To enable/disable the Firewall

- 1. Right click on the system tray icon keeping the CIS interface in Compact View
- 2. Move the mouse cursor over 'Firewall'

COMODO Creating Trust Online

3. Choose 'Enabled or Disabled' as per your choice

You can find the set security level also from the Home Screen.

Auto-Sandbox

To enable/disable the Auto-Sandbox

- 1. Right click on the system tray icon keeping the CIS interface in Compact View.
- 2. Move the mouse cursor over 'Behavior Blocker'

3. Choose 'Enabled or Disabled' as per your choice

You can find the set security level also from the Home Screen.

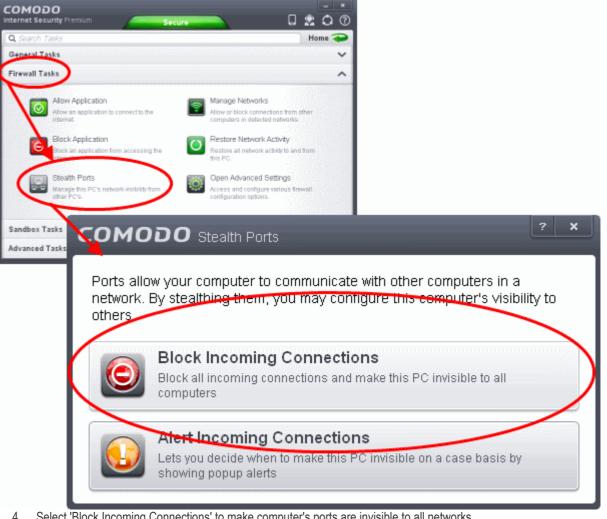

Setting up the Firewall For Maximum Security and Usability

This page outlines the functions of Comodo's Firewall and helps you to set up a secure connection to the Internet.

Stealth Ports Settings

Port Stealthing is a security feature whereby ports on an Internet connected PC are hidden from sight, sending no response to opportunistic port scans.

- 1. Open 'Tasks' interface by clicking the green curved arrow at top right of the 'Home' screen
- 2. Open 'Firewall Tasks' by clicking 'Firewall Tasks' from the Tasks interface
- 3. Open Stealth Ports interface by clicking the 'Stealth Ports' icon Firewall Tasks panel

Select 'Block Incoming Connections' to make computer's ports are invisible to all networks 4.

Click here for more details on Stealthing your Computer Ports

Network Zones Settings

The 'Network Zones' settings allow you to configure the protection level for network connection to a Router/home network. (This is usually done **automatically** for you).

To view the configurations

- 1. Open 'Tasks' interface by clicking the green curved arrow at top right of the 'Home' screen
- 2. Open 'Firewall Tasks' by clicking 'Firewall Tasks' from the Tasks interface and click 'Open Advanced Settings'.
- Click 'Network Zones' under Firewall from the left hand side pane 3.
- Click 'Network Zones' tab from the 'Network Zones' interface 4.

		OK Cancel

Check the Loopback zone and Local Area Network #1. In most cases, the loopback zone IP address should be 127.0.01/255.0.0.0

In most cases, the IP address of the auto detected Network zone should be 192.168.1.100/255.255.255.0.

5. Check these addressees and click 'OK'.

Click here for more details on Network Zones settings

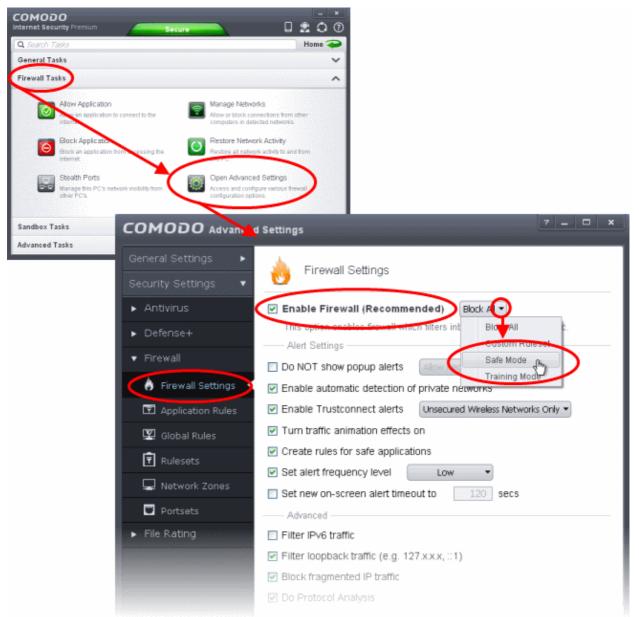

Firewall Behavior Settings

The Firewall Behavior Settings option allows you to configure the protection level for your Internet connection and the frequency of alerts generated.

To open Firewall Behavior Settings panel

- 1. Open 'Tasks' interface by clicking the green curved arrow at top right of the 'Home' screen
- 2. Open 'Firewall Tasks' by clicking 'Firewall Tasks' from the Tasks interface and click 'Open Advanced Settings'.
- 3. Click 'Firewall Settings' under Firewall from the left hand side pane
- 4. Ensure that 'Enable Firewall' is selected and choose Safe mode from the drop-down beside it.

COMODO Creating Trust Online

Safe Mode: While filtering network traffic, the firewall will automatically create rules that allow all traffic for the components of applications certified as 'Safe' by Comodo. For non-certified new applications, you will receive an alert whenever that application attempts to access the network. Should you choose, you can grant that application Internet access by choosing 'Treat this application as a Trusted Application' at the alert. This will deploy the predefined firewall policy 'Trusted Application' onto the application.

Alert Settings

Under 'Alert Settings' in the same interface:

- Deselect Do NOT show popup alerts
- Select 'Set alert frequency level' option and choose 'Low' from the drop-down. At the 'Low' setting, the firewall shows alerts for outgoing and incoming connection requests for an application. This is the setting recommended by Comodo and is suitable for the majority of users.

tungs → ty Settings ▼	Birewall Settings
itivirus efense+	Enable Firewall (Recommended) Safe Mode This option enables firewall which filters inbound and outbound traffic. Alert Settings

	Set alert frequency level
Network Zones	Set new on-screen alert time Very High Secs
Portsets	Advanced Medium
Rating	□ Filter IPv6 traffic
	Filter loopback traffic (e.g. 1 Very Low
	Block fragmented IP traffic

Advanced Settings

When launching a denial of service or 'flood' attack, an attacker bombards a target machine with so many connection requests that your computer is unable to accept legitimate connections, effectively shutting down your web, email, FTP or VPN server. To protect from such attacks, make the following settings under 'Advanced' in the 'Firewall Settings' interface:

- Select Filter loopback traffic
- Ensure that the Block fragmented IP traffic is selected
 - Block fragmented IP traffic When a connection is opened between two computers, they must agree on a
 Maximum Transmission Unit (MTU). IP Datagram fragmentation occurs when data passes through a router
 with an MTU less than the MTU you are using i.e when a datagram is larger than the MTU of the network
 over which it must be sent, it is divided into smaller 'fragments' which are each sent separately. Fragmented
 IP packets can create threats similar to a DOS attack. Moreover, these fragmentations can double the
 amount of time it takes to send a single packet and slow down your download time.
- · Select the Do Protocol Analysis checkbox to detect fake packets used in denial of service attacks
- Select Enable anti-ARP spoofing

	Create rules for safe applications
	Set alert frequency level
etwork Zones	Set new on-screen alert timeout to 120 secs
ortsets	Advanced
Rating	Filter IPv6 traffic
	Filter loopback traffic (e.g. 127.x.x.x, ::1)
	Block fragmented IP traffic
	Do Protocol Analysis
	Enable anti-ARP spoofing
	OK Cancel
	Enable anti-ARP spoofing

5. Click 'OK' for your settings to take effect.

Click here for more details on Firewall Behavior Settings

Setting-up Application Rules, Global Rules and Predefined Firewall Rulesets

You can configure and deploy traffic filtering rules and policies on an application specific and global basis and predefined firewall rulesets.

To view the Application Rules

- 1. Open 'Tasks' interface by clicking the green curved arrow at top right of the 'Home' screen
- 2. Open 'Firewall Tasks' by clicking 'Firewall Tasks' from the Tasks interface and click 'Open Advanced Settings'.
- 3. Click 'Application Rules' under Firewall from the left hand side pane

4. Click the handle from the bottom and Add or Edit rules for specific applications manually or remove them.

Click here for more details on Application Rules

To view the Global Rules

- 1. Open 'Tasks' interface by clicking the green curved arrow at top right of the 'Home' screen
- 2. Open 'Firewall Tasks' by clicking 'Firewall Tasks' from the Tasks interface and click 'Open Advanced Settings'.
- 3. Click 'Global Rules' under Firewall from the left hand side pane

COMODO Creating Trust Online*

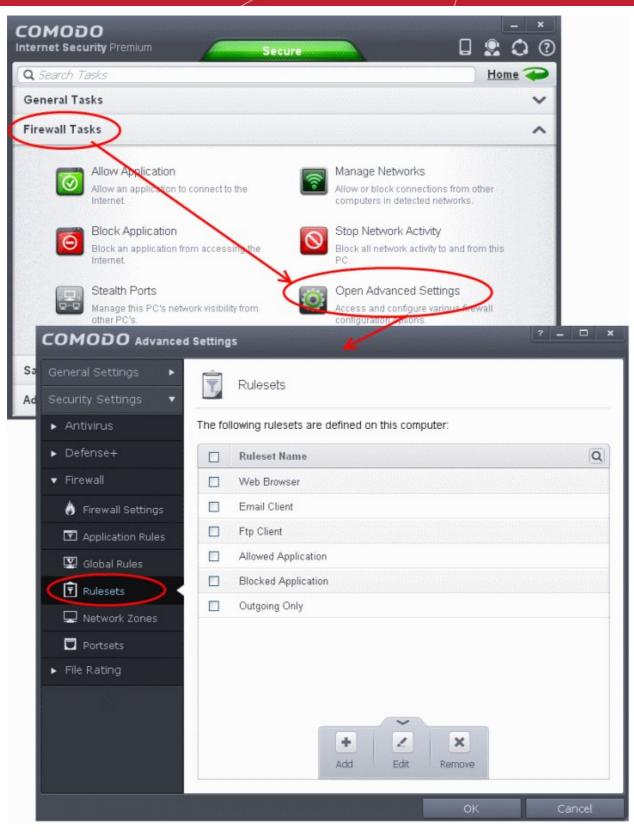

4. Click the handle from the bottom and Add or Edit global rules manually or remove them.

Click here for more details on Global Rules

To view Predefined Firewall rulesets

- 1. Open 'Tasks' interface by clicking the green curved arrow at top right of the 'Home' screen
- 2. Open 'Firewall Tasks' by clicking 'Firewall Tasks' from the Tasks interface and click 'Open Advanced Settings'.
- 3. Click 'Rulesets' under Firewall from the left hand side pane

COMODO Creating Trust Online

4. Click the handle from the bottom to and Add, Edit or remove rulesets.

You need not make your own rulesets, the defaults are usually enough.

Click here for more details on pre-defined firewall rulesets

Blocking Internet Access while Allowing Local Area Network (LAN) Access

You can configure Comodo Firewall to block Internet access while allowing free connections to an internal network (Intranet or LAN).

Example scenarios:

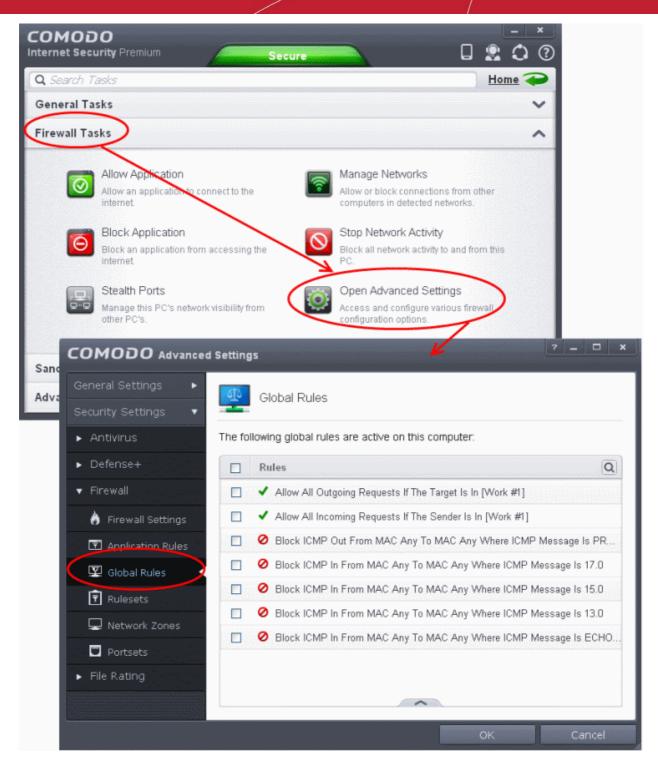

- In your network at home, you want your child's computer to connect to other computers at home but disable Internet
 access to them for safety reasons
- In your corporate network, you want your employee's computers to connect to your local network machines but disable Internet access for them for bandwidth restrictions

To selectively block connection to Internet whilst allow connection to internal network you need to create a Global Rule under Advanced Firewall Settings and password protect your configuration to prevent others from altering it.

To create a Global Rule

- 1. Open 'Tasks' interface by clicking the green curved arrow at top right of the 'Home' screen
- 2. Open 'Firewall Tasks' by clicking 'Firewall Tasks' from the Tasks interface and click 'Open Advanced Settings'.
- 3. Click 'Global Rules' under Firewall from the left hand side pane

COMODO Creating Trust Online*

4. Click the handle from the bottom and choose 'Add' from the options. The Firewall Rule interface will open.

COMODO Creating Trust Online*

ting	Image Image
	OK Cancel

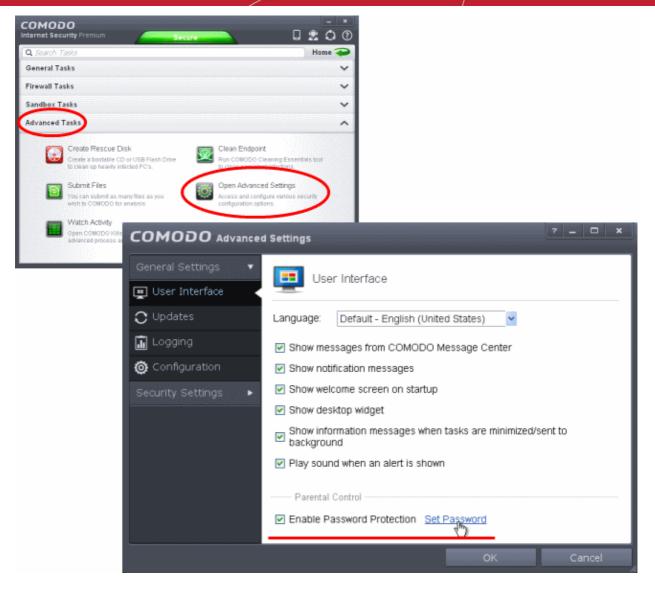

12. Click 'OK' for your configuration to take effect.

Your Firewall is now configured to allow access to internal network but to block Internet access. Now you need to password protect this configuration to prevent others from changing it.

To password protect your configuration

- 1. Open 'Tasks' interface by clicking the green curved arrow at top right of the 'Home' screen
- 2. Open 'Advanced Tasks' by clicking ' Advanced Tasks' from the Tasks interface and click 'Open Advanced Settings'.
- 3. Click 'User Interface' under General Settings from the left hand side pane

4. Select 'Enable Password Protection' under 'Parental Control' and click 'Set Password' link. The Change password dialog will appear.

COMODO Change passw	vord ? ×
Change password	
Password:	
Retype:	
ОК	Cancel

5. Enter and confirm your password then click OK. Make sure to create a strong password containing a mixture of uppercase and lowercase characters, numbers and symbols so that it cannot be easily guessed by others.

The configuration is now password protected. From the next attempt to change any configuration changes to CIS, you will be

COMODO Creating Trust Online*

prompted to enter the password to proceed.

Setting up the HIPS for Maximum Security and Usability

This page explains on configuring the Host Intrusion Prevention System (HIPS) component of CIS to provide maximum security from the malicious programs that try to execute from within your system and to protect your system from data theft, computer crashes and system damage by preventing most types of buffer overflow attacks, prevent possible attacks from root-kits, interprocess memory injections, key-loggers and more.

To configure HIPS

- 1. Open 'Tasks' interface by clicking the green curved arrow at top right of the 'Home' screen
- 2. Open 'Advanced Tasks' by clicking ' Advanced Tasks' from the Tasks interface and click 'Open Advanced Settings'.
- 3. Click 'Security Settings' > 'Defense+ ' > 'HIPS' > 'HIPS Settings' from the left hand side pane

Advanced Settings

8. Make the following settings under Advanced in the HIPS Settings interface

COMODO Creating Trust Online*

Create rules for safe applications
Set new on-screen alert timeout to 120 secs
Advanced
Enable adaptive mode under low system resources
Block all unknown requests when the application is not running
Enable enhanced protection mode (Requires a system restart)
OK Cancel

- Optional Enable 'Block all unknown requests if the application is not running'. Selecting this option blocks all unknown execution requests if Comodo Internet Security is not running/has been shut down. This is option is very strict indeed and in most cases should only be enabled on seriously infested or compromised machines while the user is working to resolve these issues. If you know your machine is already 'clean' and are looking just to enable the highest CIS security settings then it is OK to leave this box unchecked.
- If you are using a 64-bit system, in order to maximize the security, it is important to select 'Enable enhanced protection mode (Requires a system restart)' – Enabling this mode will activate additional host intrusion prevention techniques in Defense+ to countermeasure extremely sophisticated malware that tries to bypass regular countermeasures.

Because of limitations in Windows 7 x64, some HIPS functions in previous versions of CIS could theoretically be bypassed by malware. Enhanced Protection Mode implements several patent-pending ways to improve HIPS in Defense+.

Click here for more details on HIPS Behavior Settings

Setting up the Behavior Blocker for Maximum Security and Usability

This page explains on configuring the Behavior Blocker to auto-sandbox applications that are unrecognized by CIS to prevent potential damages to your system from untrusted programs.

To configure Behavior Blocker

- 1. Open 'Tasks' interface by clicking the green curved arrow at top right of the 'Home' screen
- 2. Open 'Advanced Tasks' by clicking ' Advanced Tasks' from the Tasks interface and click 'Open Advanced Settings'.
- 3. Click 'Security Settings' > 'Defense+ ' > 'Behavior Blocker' from the left hand side pane

Password Protect Your CIS Settings

This page explains how to password protect access to the CIS interface. Implementing the steps explained on this page means another user will not be able to access the CIS interface to modify or over-ride the security settings you have implemented.

To enable password protection

- 1. Open 'Tasks' interface by clicking the green curved arrow at top right of the 'Home' screen
- 2. Open 'Advanced Tasks' by clicking ' Advanced Tasks' from the Tasks interface and click 'Open Advanced Settings'.
- 3. Click 'User Interface' under General Settings from the left hand side pane

4. Select 'Enable Password Protection' under 'Parental Control' and click 'Set Password' link. The Change password dialog will appear.

сомо	O Enter pas	sword	?
Password:			
	0	ĸ	Cancel

Reset Forgotten Password (Advanced)

This page explains how to remove password protection/reset password just in case you forgot the password you had set for COMODO Internet Security.

Note: It is not possible to 'retrieve' a forgotten password - you can only reset it. To do this involves modification of the Windows registry and is only recommended for experienced users.

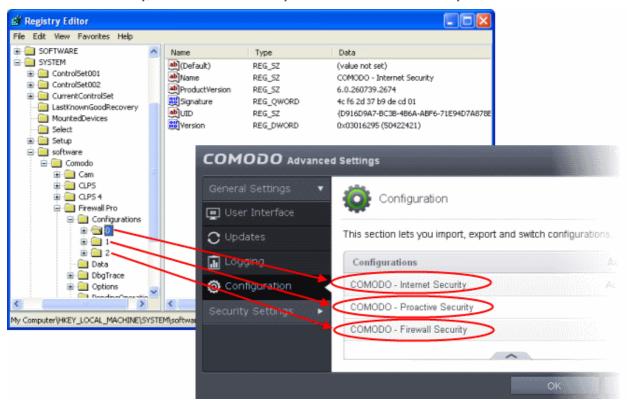

To disable password protection in CIS

- 1. Click Start > Run, from the Windows Start menu
- 2. Type 'regedit' in the text box and click 'OK'

Run	? 🛛
-	Type the name of a program, folder, document, or Internet resource, and Windows will open it for you.
Open:	regedit 💌
	OK Cancel Browse

3. Navigate to HKEY_LOCAL_MACHINE\SYSTEM\Software\Comodo\FirewallPro\Configurations\

Under the Configurations folder you will see sub-folders named 0,1,2,... depending on the number of preset configurations in CIS. These folders contain registry keys for the settings of the preset configurations in the order of the configurations displayed in **Advanced Settings > General Settings > Configuration** interface. For example, the folder 0 contains the keys for COMODO - Internet Security, the folder 1 contains the keys for COMODO - Proactive Security and so on.

 Select the folder corresponding to the configuration for which you wish to reset the password and navigate to Settings, for example, navigate to HKEY_LOCAL_MACHINE\SYSTEM\Software\Comodo\FirewallPro\Configurations\0\Settings to reset password in COMODO - Internet Security configuration.

9. Restart the system for the changes to take effect

Now you should be able to access all settings, uninstall CIS and set a new password.

Note: If CIS doesn't allow regedit to change those registry items, try to boot in safe mode and repeat the above steps.

Running an Instant Antivirus Scan on Selected Items

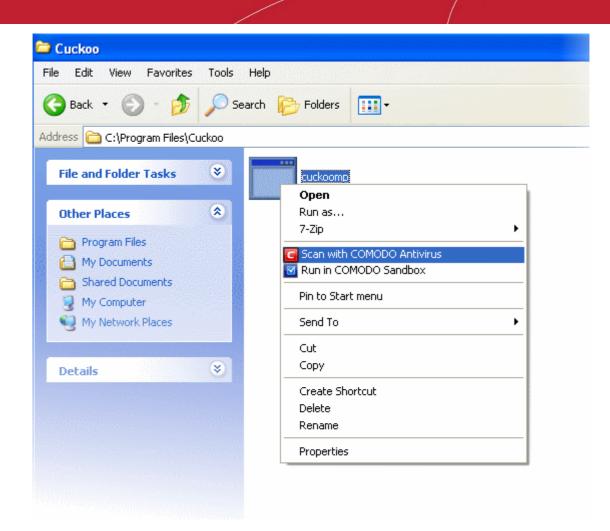

You can run an instant antivirus scan on any selected area like disks, folders files etc. You can also check a wide range of removable storage devices such as CDs, DVDs, external hard-drives, USB connected drives, digital cameras - even your iPod and mobile phones too!!! This is useful if you have just copied a file/folder or a program from an external device like a USB drive, another system in your network, or downloaded from the Internet.

Click here for more details on running on-demand scans.

To instantly scan an item

· Right click on the item and select Scan with 'Comodo Antivirus' from the context sensitive menu.

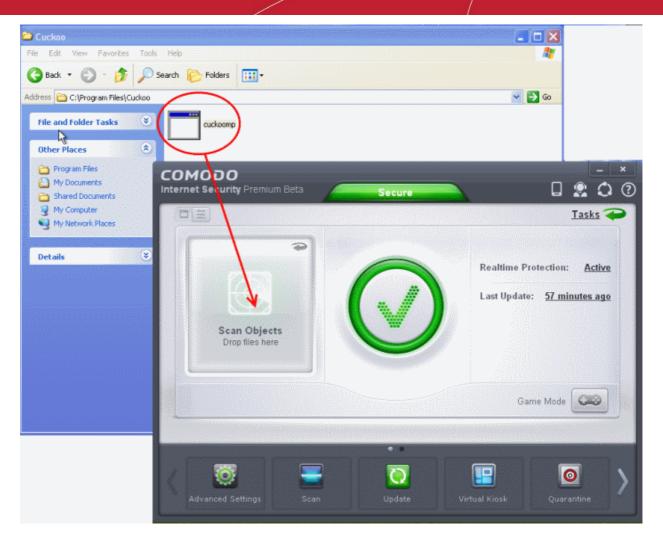

COMODO Creating Trust Online*

OR

• Drag and drop the item over the area marked 'Scan Objects' in the compact view of 'Home' screen in the CIS interface

COMODO Creating Trust Online*

OR

Drag and drop the item over the area marked 'Scan Objects' in the advanced view of 'Home' screen in the CIS interface

Creating an Antivirus Scanning Schedule

Comodo Internet Security allows you to schedule Antivirus scans on your entire system or on specific areas according to your preferences. You can create a custom scan profile defining exactly which files and folders are to be scanned, when they are to be scanned and how they are to be scanned.

To create an antivirus scanning schedule

- Click the 'Tasks' arrow on the home screen to open the main Tasks menu
- In 'General Tasks', click 'Scan'
- Select 'Custom Scan' then 'More Scan Options'
- The 'Advanced Settings' interface will be displayed with 'Scans' panel opened
- Click the handle at the bottom of the interface then select 'Add'

COMODO Creating Trust Online

COMODO Creating Trust Online*

Comodo Internet Security 6.3 - User Guide

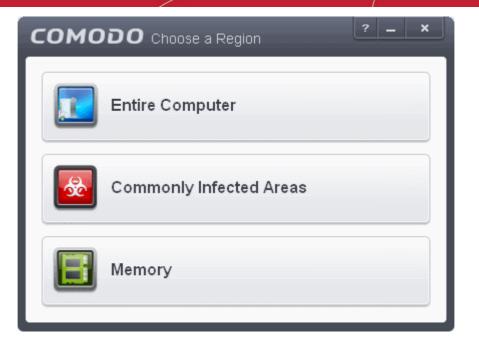

The scan profile interface will be displayed.

- Type a name for the profile in the 'Scan Name' text box
- Click the handle at the bottom of the interface to select items to be included in the profile:

сомор	D Scan	? X
Scan Name: Define items to	Example Scan Profile be scanned, scanning options and running schedule]
ltems		^
Profile C:\scripts\Inst	all_Software.vbs	
Options		~
Schedule		~
	OK	Cancel

- Add File Allows you to add individual files to the profile.
- Add Folder Allows you to select entire folders to be included in the profile
- Add Region Allows you to add pre-defined regions to the profile (choice of 'Full Computer', 'Commonly Infected Areas' and 'System Memory')

COMODO Creating Trust Online

- Repeat the process to add more items to the profile. Click 'OK' to confirm your choice.
- Next, click 'Options' to further customize the scan:

COMODO Scan		_	×
Scan Name: Example Scan Profile Define items to be scanned, scanning options and running schedule			
Items			~
Options			^
 Enable scanning optimizations This option increases the scanning speed significantly Decompress and scan compressed files This option allows scanner to decompress archive files e.gZip .Rar etc. during scanning Use cloud while scanning This option allows scanner to connect to cloud to query file ratings Automatically clean threats Disinfect Threats When the threats are identified, perform the selection action automatically Use heuristics scanning Low When the threats are identified, perform the selection action automatically Limit maximum file size to 40 MB(s) While scanning, if a file size is larger then specified, it is not scanned 			
Shedule			~
ОК	C	Canci	el

• Options:

•

Enable scanning optimizations - On selecting this option, the antivirus will employ various optimization techniques like running the scan in the background in order to speed-up the scanning process (*Default* = *Enabled*).

- **Decompress and scan compressed files** When this check box is selected, the Antivirus scans archive files such as .ZIP and .RAR files. Supported formats include RAR, WinRAR, ZIP, WinZIP ARJ, WinARJ and CAB archives (*Default = Enabled*).
- Use cloud while scanning Selecting this option enables the Antivirus to detect the very latest viruses
 more accurately because the local scan is augmented with a real-time look-up of Comodo's online signature
 database. With Cloud Scanning enabled your system is capable of detecting zero-day malware even if your
 local anitvirus database is out-dated. (Default = Disabled).
- Automatically clean threats Enables you to select the action to be taken against the detected threats and
 infected files automatically from disinfecting Threats and moving the threats to quarantine.
- Use heuristics scanning Enables you to select whether or not Heuristic techniques should be applied on scans in this profile. You are also given the opportunity to define the heuristics scan level. (Default = Disabled).

Background Info: Comodo Internet Security employs various heuristic techniques to identify previously unknown viruses and Trojans. 'Heuristics' describes the method of analyzing the code of a file to ascertain whether it contains code patterns similar to those in known viruses. If it is found to do so then the application deletes the file or recommends it for quarantine. Heuristics is about detecting 'virus-like' traits or attributes rather than looking for a precise virus signature that matches a signature on the virus blacklist.

This allows CIS to 'predict' the existence of new viruses - even if it is not contained in the current virus database.

- Low Lowest' sensitivity to detecting unknown threats but will also generate the fewest false positives. This setting combines an extremely high level of security and protection with a low rate of false positives. Comodo recommends this setting for most users.
- Medium Detects unknown threats with greater sensitivity than the 'Low' setting but with a
 corresponding rise in the possibility of false positives.
- **High** Highest sensitivity to detecting unknown threats but this also raises the possibility of more false positives too.
- Limit maximum file size to Select this option if you want to impose size restrictions on files being scanned. Files of size larger than that specified here, are not scanned, if this option is selected (*Default* = 40 MB).
- Run this scan with Enables you to set the priority of the scan profile. You can select the priority from the drop-down.(*Default = Disabled*).
- Update virus database before running Instructs Comodo Internet Security to check for latest virus signature database updates from Comodo website and download the updates automatically before starting the scanning (*Default = Enabled*).
- Detect potentially unwanted applications When this check box is selected, Antivirus scans also scans for applications that (i) a user may or may not be aware is installed on their computer and (ii) may functionality and objectives that are not clear to the user. Example PUA's include adware and browser toolbars. PUA's are often installed as an additional extra when the user is installing an unrelated piece of software. Unlike malware, many PUA's are 'legitimate' pieces of software with their own EULA agreements. However, the 'true' functionality of the software might not have been made clear to the end-user at the time of installation. For example, a browser toolbar may also contain code that tracks a user's activity on the Internet.
- To schedule the scan to run at set intervals, click 'Schedule':

сомодо за	can								?	_	×
Scan Name: Example Scan Profile Define items to be scanned, scanning options and running schedule											
ltems											~
Options											~
Shedule											^
Frequency: Do not schedule Every Day Every Week Every Month	this task	Start Tin Day(s) of Sun		5:30 / Tue	Wed	Thu	Fri	Sat			
Run only when c	computer is not running or computer is IDLE er if no threats are found a	-	of the s	can							
							OK		С	ance	!

- Do not schedule this task The scan profile will be created but will not be run automatically. The profile will be available for manual on-demand scanning
- Every Day The Antivurus starts scanning the areas defined in the scan profile every day at the time specified in the Start Time field
- Every Week The Antivurus starts scans the areas defined in the scan profile on the day(s) of the week specified in 'Days of the Week' field and the time specified in the 'Start Time' field. You can select the days of the week by directly clicking on them.
- Every Month The Antivurus starts scans the areas defined in the scan profile on the day(s) of the month specified in 'Days of the month' field and the time specified in the 'Start Time' field. You can select the days of the month by directly clicking on them.
- Run only when computer is not running on battery This option is useful when you are using a laptop or any other battery driven portable computer. Selecting this option runs the scan only if the computer runs with the adopter connected to mains supply and not on battery.
- Run only when computer id IDLE Select this option if you do not want to disturbed when involved in computer related activities. The scheduled can will run only if the computer is in idle state
- Turn off computer if no threats are found at the end of the scan Selecting this option turns your computer off, if no threats are found during the scan. This is useful when you are scheduling the scans to run at nights.
- Click OK to save the profile.

The profile will be saved and the selected areas will be scanned repeatedly as per the set schedule.

Note: The schedule scan will run only if it is enabled. Click the button under the Active column beside the respective profile row

to toggle between on and off status.

Running Untrusted Programs In the Sandbox

Comodo Internet Security allows you to run programs inside the Sandbox on a 'one-off' basis. This is helpful to test the behavior of new executables that you have downloaded or for applications that you are not sure that you trust. You can also create a desktop shortcut to run the application inside the sandbox on future occasions. The following image shows hows a 'virtual' shortcut will appear on your desktop:

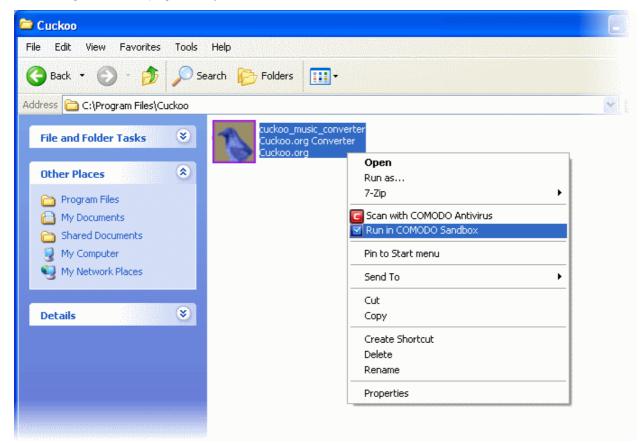

Comodo Internet Security allows you to run a program in the sandbox:

- From the right click options
- By dragging-and-dropping the application on to CIS Home screen
- From the Sandbox Tasks interface

Note: If you wish to run an application in the sandbox on a long-term/permanent basis then add the file to the Sandbox.

Run a program inside the sandbox through right click options

- 1. Browse to the installation folder of the .exe file through Windows Explorer
- 2. Right click on the program that you want to run inside the sandbox

3. Choose 'Run in Comodo Sandbox' from the context sensitive menu

Drag-and-drop the application on to CIS Home Screen

In the 'Compact View' of the Home screen the flippable pane at the left side allows you to run instant scans or run a program in sandbox. To flip the pane to carry out these tasks, just click the curved arrow at the top right side of the pane to display the Home screen.

COMODO Internet Security Premium	Secure	G	- 2	× ?

Running Browsers Inside Sandbox

This page explains how to run your Internet browser inside the sandbox. Surfing the Internet with a sandboxed browser is the same as normal, with the benefit that any malicious files you inadvertently download cannot do damage your real computer. You can also create a desktop shortcut to run the browser inside the sandbox on future occasions. The following image shows how a 'virtual' shortcut will appear on your desktop:

Comodo Internet Security allows you to run a browser in the sandbox:

- From the desktop widget
- From the Sandbox Tasks interface

Starting a browser from the desktop widget

The CIS Desktop Widget displays shortcut icons of the browsers installed in your computer.

• To start a browser inside the sandbox, click on the browser icon.

Starting a browser from the Sandbox Tasks interface

- 1. Click the 'Tasks' arrow on the home screen to open the main Tasks menu
- 2. Click 'Sandbox Tasks' and click 'Run Virtual' from the 'Sandbox Tasks' interface

The 'Run Virtual' dialog will be displayed.

 To run a browser inside the sandbox, click 'Choose and Run', navigate to the installation location of the browser and select the exe file of the browser. If you wish to create a desktop shortcut to run the browser in the sandbox in future, then select 'Create a virtual desktop shortcut'.

The browser will run with a green border indicating that it is sandboxed.

Running Untrusted Programs Inside Virtual Kiosk

This page explains how to run untrusted programs inside the Virtual Kiosk. Applications running in the kiosk also leave no cookies or history behind on your real system, making it ideal for testing out beta/unstable software.

Applications installed or the files stored in your system can be opened inside the Virtual Kiosk by the following methods:

- · Opening the applications/files from the desktop shortcuts
- Sharing the application/files through the Shared Space folder

Desktop Shortcuts

You can copy the files or create shortcuts for the applications/files to be opened in Virtual Kiosk, in the desktop of your real system. The shortcuts of your real desktop will be available in the Virtual Kiosk desktop. You can double click on the icon to open the respective application of file inside the Virtual Kiosk.

Note: The real computer desktop icons will be available only in the Classic Windows Mode and Tablet + Classic Mode.

Shared Space

The Virtual Kiosk creates a folder Shared Space in the location "C:\Documents and Settings\All Users\Application Data\Shared Space", which can be shared by your host operating system and the Virtual Kiosk.

The Shared Space can be accessed in the following ways:

- Click 'Open Shared Space' under 'Sandbox' Tasks in the Tasks Interface
- · Click the 'Shared Space' shortcut icon from the home screen of CIS
- · Click the 'Shared Space' shortcut icon from the CIS widget
- Click the 'Shared Space' desktop shortcut icon

To open an application or file from your host system in the Virtual Kiosk

- 1. Open the 'Shared Space' as mentioned above
- 2. Copy/Move the application or the file to be opened into the Shared Space
- 3. Start 'Virtual Kiosk' by clicking the Virtual Kiosk shortcut in the CIS home screen or by clicking Sandbox Tasks > Run Virtual Kiosk from the Tasks interface of CIS.

4. Open Shared Space inside the Virtual Kiosk by clicking the 'Shared Space' icon in the home screen.

Note: The Shared space home screen icon will be available only in the Classic Windows Mode and Tablet + Classic Mode.

5. Double click on the application/file in the shared space to open it inside the Kiosk.

The changes you make to the file will be stored to the file only inside the Virtual Kiosk and not in the real computer system.

Running Browsers Inside the Virtual Kiosk

The Virtual Kiosk provides an extremely secure environment for Internet related activities because it isolates your browser from the rest of your computer. Just by visiting them, malicious websites can install viruses malware, rootkits and spyware onto your computer that can allow hackers to steal confidential information. Surfing the 'net inside the Kiosk removes this threat to your machine by preventing any website from installing anything on your real computer. Furthermore, the Virtual Keyboard allows you to securely enter user-names, credit card numbers and passwords without fear of key-logging software recording your physical keystrokes.

To run a browser inside the Virtual Kiosk

- 1. Click the 'Kiosk' menu at the bottom left
- 2. Select the browser you want to run from the browsers displayed.

2 2 GeekBuddy COMODO COMODO Kiosk COMODO Dragon R Opera Google Chrome Mozilla firefox Internet Explorer Settings Ö Switch to Windows Exit Kiosl

Restoring Incorrectly Quarantined Item(s)

If you have incorrectly quarantined item(s) or you feel an item has been incorrectly quarantined by the application (a false positive) then you can restore it/them using the following procedure:

To submit Quarantined items

- 1. Click the 'Tasks' arrow on the home screen to open the main Tasks menu
- 2. In 'General Tasks', click 'View Quarantine'

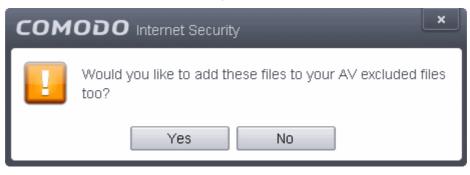

The 'Quarantine' interface will open. The interface displays a list of items moved to Quarantine manually, from the results of realtime scanning, on-demand scanning and scheduled scans.

3. Choose the items to be restored by selecting the checkboxes beside them.

4. Click the handle from the bottom and choose 'Restore'.

An option to add the selected items to AV excluded files will open.

If you select 'Yes', these items will not be included for AV scans. If you select' No', these items will be included for AV scans and quarantined during the next scanning.

All the selected files will be restored to their original locations immediately.

5. Click 'Close' button to exit.

Click here for more details on the Quarantined Items.

Submitting Quarantined Items to Comodo for Analysis

Items which have been quarantined as a result of an On Access, On Demand or Scheduled Scans, can be sent to Comodo for Analysis. After the analysis, if the submitted item is found to be a False Positive, it will be added to Comodo Safe List. Conversely, if it is found to be a malware, it will be added to the anti-malware Black list. This helps Comodo to enhance its virus signature database and helps millions of other CIS users to benefit out of it. **Click here** for more details on Quarantined Items.

To submit Quarantined items

- 1. Click the 'Tasks' arrow on the home screen to open the main Tasks menu
- 2. In 'General Tasks', click 'View Quarantine'

The 'Quarantine' interface will open. The interface displays a list of items moved to Quarantine manually, from the results of realtime scanning, on-demand scanning and scheduled scans.

Enabling File Sharing Applications like BitTorrent and Emule

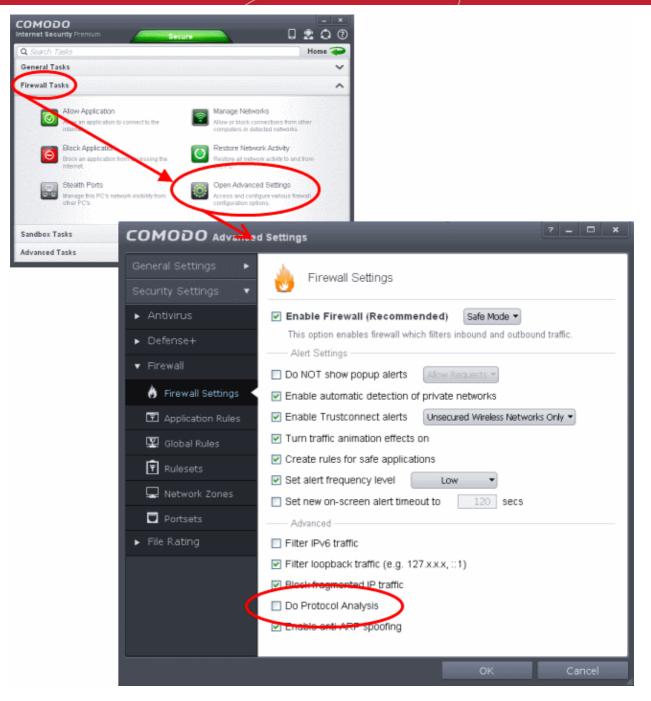

This page explains how to configure Comodo Firewall for file sharing applications like Shareaza/Emule and BitTorrent/UTorrent. To allow these file sharing applications, you must:

- Disable 'Do Protocol analysis' (disabled, by default)
- Create a 'Predefined Firewall Ruleset' for Shareaza/Emule
- Create a 'Predefined Firewall Ruleset' for BitTorrent/Utorrent

To Disable 'Do Protocol analysis'

- 1. Open 'Tasks' interface by clicking the green curved arrow at top right of the 'Home' screen
- 2. Open 'Firewall Tasks' by clicking 'Firewall Tasks' from the Tasks interface and click 'Open Advanced Settings'.

COMODO Creating Trust Online

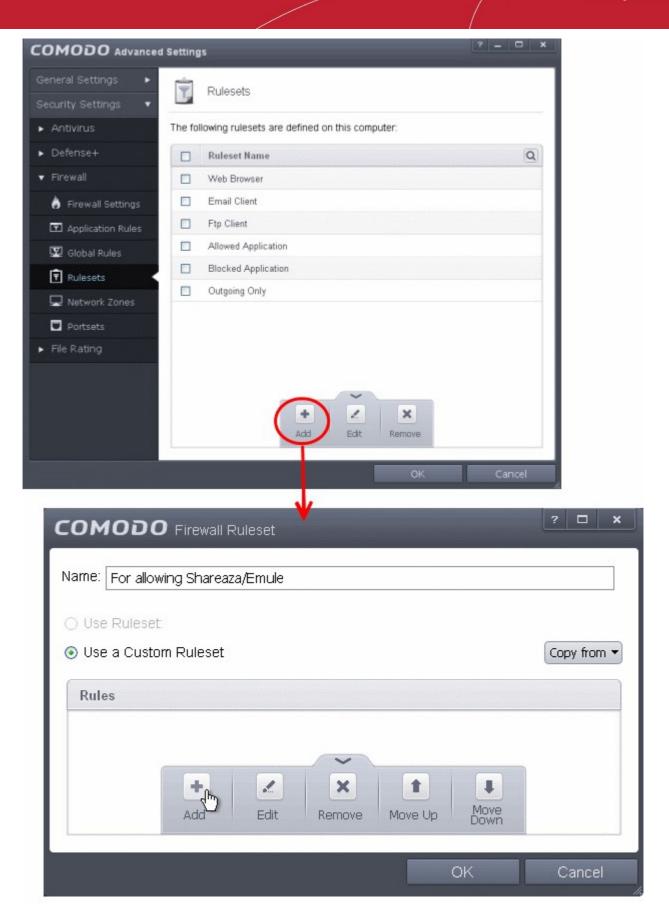

3. Ensure that 'Do Protocol Analysis' checkbox is not selected.

To Create a 'Predefined Firewall Ruleset' for Shareaza/Emule

- 1. Click 'Rulesets' under 'Firewall' from the LHS navigation pane of 'Advanced Settings' interface to open 'Rulesets' panel
- 2. Click the handle from the bottom of the panel and choose 'Add'

COMODO Creating Trust Online

The 'Firewall Ruleset' interface will open for creating a new set of rules.

- 3. Click the handle from the bottom and choose 'Add'
- 4. Enter a descriptive name for the new ruleset to be created in the 'Description' text box (for example: For allowing Shareaza/Emule).

5. Now you need to create six rules for the newly created ruleset. To do so, click 'Add'. The 'Firewall Rule' interface will appear. For creating each rule, select the check box and choose the drop-down options under each tab as given below. After creating each rule, click 'OK' for the rule to be added. Click handle in the 'Firewall Ruleset' interface and choose 'Add' to create the next rule.

сомор	O Firewa	ll Rule					? X
Action: Protocol: Direction: Description	Allow TCP IN Rule for i		_		/ent if this ru	ule is fired	
Source Ad		Destinat Addres	SS	Sourc	e Port	Destination	Port
	Гуре: An	y Address	<u> </u>				
					ок		ancel

Rule 1

- Action : Allow
- Protocol : TCP
- Direction : In
- Description : Rule for incoming TCP connections
- Source Address : Any Address
- Destination Address : Any Address
- Source port : A Port Range : (Start Port = 1025 / End Port = 65535)
- Destination port : A Single Port : (Port : Your TCP port of Shareaza/Emule)

Rule 2

- Action : Allow
- Protocol : UDP
- Direction : In
- Description : Rule for incoming UDP connections
- Source Address : Any Address

- Destination Address : Any Address
- Source port : A Port Range : (Start Port = 1025 / End Port = 65535)
- Destination port : A Single Port : (Port : Your UDP port of Shareaza/Emule)

Rule 3

- Action : Allow
- Protocol : TCP or UDP
- Direction : Out
- Description : Rule for outgoing TCP and UDP connections
- Source Address : Any Address
- Destination Address : Any Address
- Source port : A port range : (start port = 1025 / end port = 65535)
- Destination port : A port range : (start port = 1025 / end port = 65535)

Rule 4

- Action : Allow
- Protocol : ICMP
- Direction : Out
- Description : Ping the server (edk network)
- Source Address : Any Address
- Destination Address : Any Address
- ICMP Details : Message : ICMP Echo Request

Rule 5

- Action : Ask (Also select the check box 'Log as a firewall event if this rule is fired')
- Protocol : TCP
- Direction : Out
- Description : Rule for HTTP requests
- Source Address : Any Address
- Destination Address : Any Address
- Source port : A port range : (start port = 1025 / end port = 65535)
- Destination port : Type : Single Port; (Port : 80)

Rule 6

- Action : Block (Also select the check box 'Log as a firewall event if this rule is fired')
- Protocol : IP
- Direction : In/Out
- Description : Block and Log All Unmatching Requests
- Source Address : Any Address
- Destination Address : Any Address
- IP Details : IP Protocol : Any
- 6. Click 'OK' in the 'Firewall Ruleset' interface.

The new ruleset will be created and added as a Predefined ruleset. Start Shareaza or Emule. When Comodo raises a pop-up alert, choose 'Treat this application as', select the descriptive name you gave for this rule (e.g. For allowing Shareaza/Emule) from the options and select 'Remember my answer'.

To create a 'Predefined Firewall Ruleset' for BitTorrent/Utorrent'

1. Click 'Rulesets' under 'Firewall' from the LHS navigation pane of 'Advanced Settings' interface to open 'Rulesets' panel

2. Click the handle from the bottom of the panel and choose 'Add'

The 'Firewall Ruleset' interface will open for creating a new set of rules.

- 3. Click the handle from the bottom and choose 'Add'
- 4. Enter a descriptive name for the new ruleset to be created in the 'Description' text box (for example: For allowing BitTorrent/Utorrent).
- 5. Now you need to create six rules for the newly created ruleset. To do so, click 'Add'. The 'Firewall Rule' interface will appear. For creating each rule, select the check box and choose the drop-down options under each tab as given below. After creating each rule, click 'OK' for the rule to be added. Click handle in the 'Firewall Ruleset' interface and choose 'Add' to create the next rule.

Rule 1

- Action : Allow
- Protocol : TCP or UDP
- Direction : In
- Description : Rule for incoming TCP and UDP connections
- Source Address : Any Address
- Destination Address : Any Address
- Source port : A Port Range : (Start port = 1025 / End port = 65535)
- Destination port : A Single Port (Port: The port of BitTorrent/Utorrent)

Rule 2

- Action : Allow
- Protocol : TCP
- Direction : Out
- Description : Rule for outgoing TCP connections
- Source Address : Any Address
- Destination Address : Any Address
- Source port : A Port Range : (Start port = 1025 / End port = 65535)
- Destination port : A Port Range : (Start port = 1025 / End port = 65535)

Rule 3

- Action : Allow
- Protocol : UDP
- Direction : Out
- Description : Rule for outgoing UDP connections
- Source Address : Any Address
- Destination Address : Any Address
- Source port : A Single Port: Port: the port of utorrent
- Destination port : A Port Range : (Start port = 1025 / End port = 65535)

Rule 4

- Action : Ask (Also select the check box 'Log as a firewall event if this rule is fired')
- Protocol : TCP
- Direction : Out
- Description : Rule for HTTP requests
- Source Address : Any Address
- Destination Address : Any Address
- Source port : A Port Range : (Start port = 1025 / End port = 65535)
- Destination port ; A Single Port (Port = 80)

Rule 5

- Action : Block (Also select the check box 'Log as a firewall event if this rule is fired')
- Protocol : IP
- Direction : In/Out
- Description : Block and Log All Unmatching Requests
- Source Address : Any Address
- Destination Address : Any Address
- IP Details : IP Protocol : Any
- 6. Click 'OK' in the 'Firewall Ruleset' interface.

The new ruleset will be created and added as a Predefined Firewall ruleset. Start BitTorrent or Utorrent. When Comodo raises a pop-up alert, choose 'Treat this application as', select the descriptive name you gave for this rule (e.g. For allowing BitTorrent/Utorrent) from the options and select 'Remember my answer'.

Blocking any Downloads of a Specific File Type

Comodo Internet Security can be configured to block downloads of specific types of file.

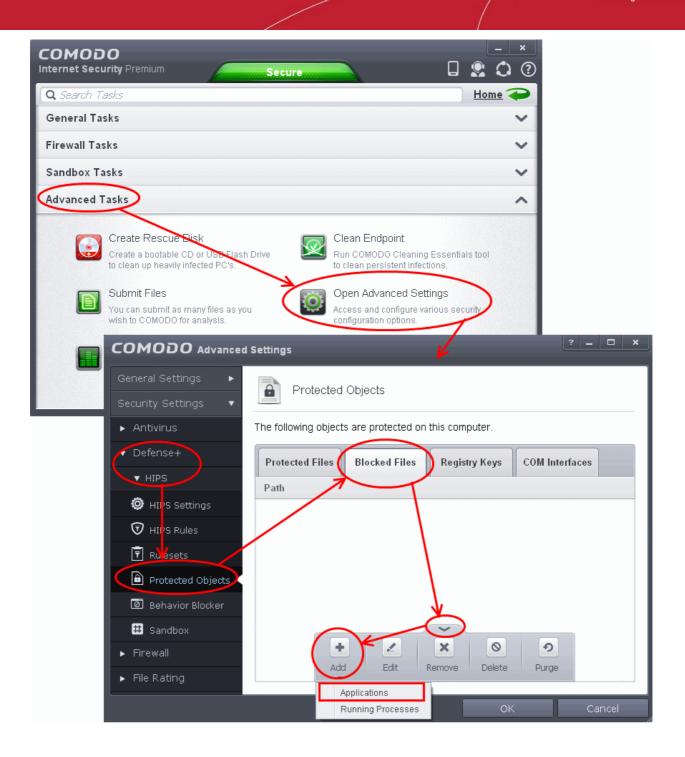

Example scenarios:

- Some malicious websites try to push downloads of malware in .exe file format. .exe files are programs which can execute commands on your computer. If the .exe is malicious in intent then these commands could include the installation of key logging programs, initiation of buffer overflow attacks or code to turn your PC into a zombie. For this reason, you may wish to block all downloads of files with a .exe file extension.
- You want to avoid downloading media files like audio files (e.g. files with extensions .wma, .mp3, .wav, .midi), video files (e.g. files with extensions .wmv, .avi, .mpeg, .swf) or image files (e.g. files with extensions .bmp. .jpg, .png) for your disk space restrictions.

To selectively block downloading of specific file type, you need to configure Defense+ component of CIS to block the specific file type from the default download folder of your browser.

- 1. Open 'Tasks' interface by clicking the green curved arrow at top right of the 'Home' screen
- 2. Open 'Advanced Tasks' by clicking ' Advanced Tasks' from the Tasks interface and click 'Open Advanced Settings'.
- 3. Click 'Security Settings' > 'Defense+ ' > 'HIPS' > 'Protected Objects' from the left hand side pane
- 4. Click 'Blocked Files' tab

COMODO Creating Trust Online

- 5. Click the handle from the bottom and choose 'Add' > 'Applications'.
- 6. Browse to the default download folder for that particular file type of your Internet Browser from the Open dialog
 - For example, the default download locations for some file types in Internet Explorer are given below:
 - Executable files C:\Documents and Settings\user name\Local Settings\Temporary Internet Files\
 - Document files C:\Documents and Settings\user name\My Documents\
 - Image files C:\Documents and Settings\user name\My Documents\My Pictures\
 - Music files C:\Documents and Settings\user name\My Documents\My Music\
 - Video files C:\Documents and Settings\user name\My Documents\My Videos\
- 7. Select file from the folder and click 'Open'

The file will be added to blocked files list.

8. Select the entry from the Blocked Files interface, click the handle from the bottom and choose Edit The Edit Property dialog will appear.

9. Change the file name at the end of the file path to *.file_extension" (e.g. *.exe, *.jpg)

COMODO Creating Trust Online*

COMODO Edit property	? X
Edit File Path C:\Documents and Settings\Administrator\My	Documents\My Pictures*.jpg
	OK Cancel

- 10. Click OK in the 'Edit Property' dialog
- 11. Click OK in the Advanced Settings interface to save your settings

The download of the specific file type to the specified folder through the browser will be blocked. If you have more than one browser, repeat the same for the other browsers too.

Note: Blocking files in this way will only block the downloads of the specific file types in the specified folders. If you change the download destination while downloading a file through your web browser, the download will be allowed.

Tip: To unblock the download, Advanced Settings > Defense+ > HIPS > File Protection > Blocked Files, select the file path, click the handle from the bottom and choose 'Remove'.

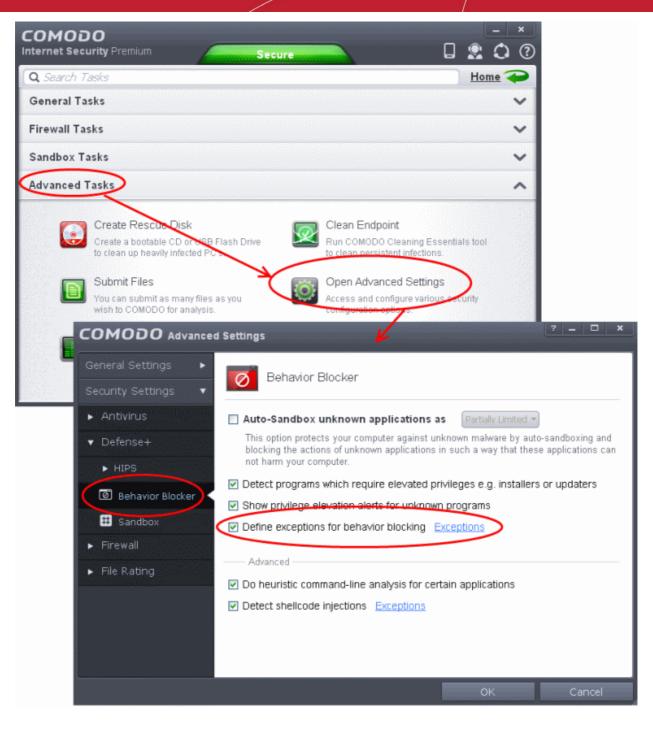

Disabling Behavior Blocker and Auto-Sandboxing on a Perapplication Basis

Behavior Blocker will auto-sandbox run unknown executables and queue them for submission to Comodo Cloud scanners for behavior analysis. Users do, however, have the option to exclude specific files or file types from this auto-sandboxing process. This is particularly useful for developers that are creating new applications which, by their nature, are as yet unknown to the Comodo safe list.

To disable the auto-sandboxing selectively

- 1. Open 'Tasks' interface by clicking the green curved arrow at top right of the 'Home' screen
- 2. Open Advanced Settings panel by clicking Advanced Tasks > Advanced Settings from the Tasks interface
- 3. Click 'Security Settings' > 'Defense+' > 'Behavior Blocker' in the left hand side navigation pane of Advanced Settings pane
- 4. Select the check box 'Define exceptions for behavior blocking and then click on the words 'Exceptions'

COMODO Creating Trust Online*

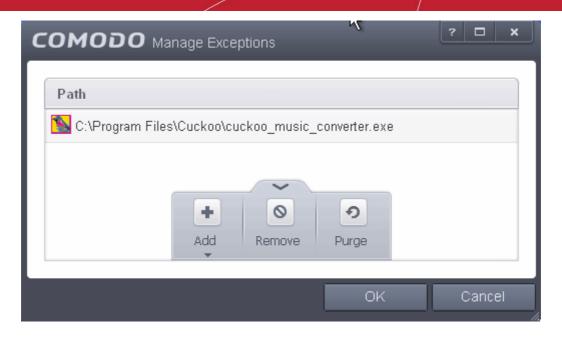

The Manage Exceptions interface will open.

Path		
	~	
	Add Remove	Executables All Applications Important Files/Folders
	File Groups Files Folders Running Processes	Web Browser Data Folders Windows Updater Application Windows System Applications Temporary Files
		COMODO Files/Folders COMODO Internet Security Startup Folders Windows Management 3rd Party Protocol Drivers

- 5. Click the handle from the bottom and choose 'Add' from the options to add the files/executables to be excluded from monitoring by Behavior Blocker and Auto-Sandboxing.
 - You can add items by selecting the required option from the drop-down:
 - File Groups Enables you to select a category of pre-set files or folders. For example, selecting 'Executables' would enable you to create a ruleset for all files with the extensions .exe .dll .sys .ocx .bat .pif .scr .cpl . Other such categories available include 'Windows System Applications' , 'Windows Updater Applications' , 'Start Up Folders' etc. For more details on file groups, refer to the section File Groups.
 - Files Opens the 'Open' window and enables you to navigate to the application or file you wish to add.
 - Folder Opens the 'Browse for Folders' window and enables you to navigate to the folder you wish to add.
 - Running Processes As the name suggests, this option allows you to select an application or executable from the processes that are currently running on your PC.
- 6. Click 'OK' in the Manage Exceptions interface.

COMODO Creating Trust Online*

7. Click OK in the Advanced Settings panel for your settings to take effect.

The selected application will not be auto-sandboxed on its execution.

Alternatively...

- 1. Add the files to the list of Trusted Files
- 2. Digitally sign your files with a code signing certificate from a trusted CA then manually add your organization to the Trusted Software Vendors list
- 3. Disable Behavior Blocker by de-selecting the 'Enable Auto-Sandbox unknown applications as' check box in the Behavior Blocker settings panel. *Not recommended*.

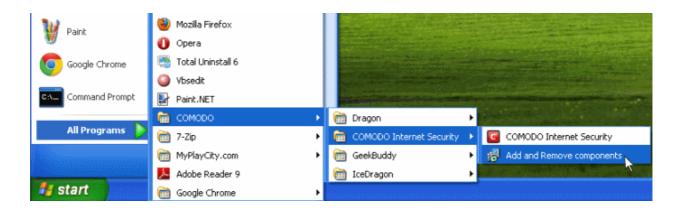

For more details on Auto-Sandboxing process, refer to the section Unknown Files: The Auto-Sandboxing and Scanning Processes.

Switching Between Complete CIS Suite and Individual Components (just AV or FW)

Comodo Internet Security provides the flexibility of installation as a complete security suite or as individual components. You can choose the installation type **during the installation** itself. Even after the installation, you can switch the installation type without the requirement of uninstallation of the software, retaining your configuration settings. You might have installed the CIS as complete suite initially but may want to retain the AV part or FW part and uninstall the other or vice versa. The inbuilt uninstaller of CIS enables to switch your installation type at any point of time.

To switch the installation type

1. Click Start > All Programs > COMODO > COMODO Internet Security > Add and Remove Components

or click Start > Control Panel > Add/Remove Programs > Comodo Internet Security > Change.

The Configuration Wizard will start.

2. Click 'Next'. The configuration selection screen will appear.

🔂 COMODO Internet Security Premium Setup	×

Please save any unsaved data and click 'Yes' to restart the system. If you want to restart the system at a later time, click 'No'.

Note: The change will take effect only on the next restart of the computer.

Switch Off Automatic Antivirus and Software Updates

By default, Comodo Internet Security will automatically check for software and Antivirus database updates. However, some users like to have control over what gets downloaded and when it gets downloaded. For example, network administrators may not wish to automatically download because it will take up to much bandwidth during the day. Similarly, users that have particularly heavy traffic loads may not want automatic updates because they conflict with their other download/upload activity.

CIS provides full control over virus and software updates. Click the appropriate link below to find out more:

- · Switch off automatic software and virus signature database updates entirely
- · Switch off automatic software and virus signature database selectively
- Switch off automatic virus signature database updates prior to Antivirus Scans

To switch off automatic updates entirely:

- 1. Open 'Tasks' interface by clicking the green curved arrow at top right of the 'Home' screen
- 2. Open Advanced Settings panel by clicking Advanced Tasks > Advanced Settings from the Tasks interface
- 3. Click 'Updates' under 'General Settings' from the left hand side navigation pane
- 4. Deselect the check boxes 'Check for program updates every xxx day(s)' and 'Check for database updates every xxx hour(s)'

Suppressing CIS Alerts Temporarily while Playing Games

Because of continuous monitoring of all your system activities in granular level for implementing Default-Deny Protection, Comodo Internet Security generates pop-up alerts whenever it identifies any event appearing to be a malicious activity or execution of programs that require privileges like Internet access and file access rights. Each alert provides information and options that enable you to make an informed decision on whether you want to allow or block a request or activity. Alerts also to allow you to instruct Comodo Internet Security on how it should behave in future when it encounters activities of the same type.

But at times when you are involved in activities like playing computer games, where you do not want to be interfered with such alerts, you can temporarily stop them from being displayed. require undisturbed environment. During this time, the operations that can interfere with users' gaming experience are either suppressed or postponed.

To temporarily stop pop-up alerts

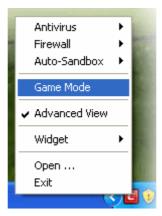

Click 'Game Mode' button from CIS Home screen

COMODO Creating Trust Online*

or

Right click on the CIS System Tray icon and select 'Game Mode' from the options.

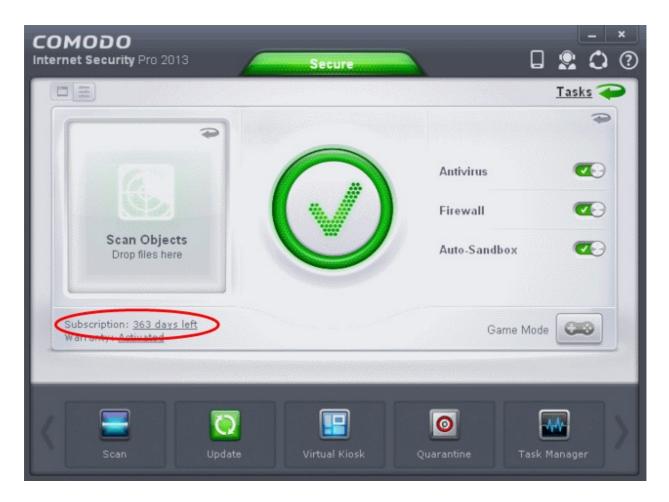

The alerts are now suppressed. To resume alerts and scheduled scans, just de-activate Game Mode from the home screen or the system tray icon right click options.

Renewing or Upgrading your License

In order to enjoy continued protection from Comodo Internet Security, you will need to renew your license when it is due to expire.

To renew or upgrade your license, click the 'Activate Now' link beside 'Subscription' on the CIS home screen (alternatively, click 'No. of days left')

The Product Activation Wizard will start.

COMODO License Management	- ×
Activate License Enter your license key to activate your product	
In order to activate:	
Make sure you are connected to the Internet	
2 Enter your license key or <u>click here</u> to obtain one	
3 Activate the license and register your product	
License Key:	
Acti	ivate

- Click the '<u>click here</u>' link. You will be taken to the purchase page at https://secure.comodo.com/home/purchase.php? afl=Comodo&rs=7&pid=9&cid=RkJEMUZENjMzQUM4RDIDNDE4MzBDQjc1NDIENUIzRkY&lid=&
- Select your CIS Package.
- Select 'Existing Comodo User' checkbox in 'Enter Customer Details' area, enter your login and password and complete the payment procedure.
- The License key will be sent to you by email. Enter the license key and click the 'Activate' button.
- After successful validation, your subscription will be activated and a confirmation screen will be displayed.

If you are renewing a license for the same CIS product then entering the license key will upgrade the license without requiring re-installation. If you are upgrading license types, then installation of the new product type will begin automatically. You may need to restart your computer to finalize the upgrade.

If you are using any of the trial versions of CIS, you have to purchase the license at the end of trial period in order to continue using the product. An alert will be displayed after the expiry of trial period.

 Click the the 'Renew Now' button in the alert screen and follow the same purchase and activation procedure explained above.

Appendix 2 - Comodo Secure DNS Service

Introduction

Comodo Secure DNS service replaces your existing Recursive DNS Servers and resolves all your DNS requests exclusively through Comodo's proprietary Directory Services Platform. Most of the networks use recursive DNS services that are provided by their ISP or that reside on their own set of small DNS servers but it becomes essential to have a secure and broadly distributed DNS service to have a faster and safe DNS resolution.

Background Note: Every device on the Internet is uniquely identified by a 32-bit number (IPv4) or a 128-bit number (Ipv6). While this is perfectly satisfactory for computers, humans are far more comfortable remembering names rather than a string of numbers. The Domain Name System (DNS) provides the translation between those names and numbers. Virtually every piece of software, device, and service on the Internet utilizes DNS to communicate with one another. DNS also makes this information available across the entire span of the Internet, allowing users to find information remotely.

Comodo Secure DNS is a broadly distributed Recursive DNS service that gives you full control to determine how your clients interact with the Internet. It requires no hardware or software and provides reliable, faster, smarter and safer Internet experience.

- Reliable Comodo Secure DNS Directory Services Platform currently spans across five continents around the world. This allows us to offer you the most reliable fully redundant DNS service anywhere. Each node has multiple servers, and is connected by several Tier 1 carriers to the Internet.
- Faster Our strategically placed nodes are located at the most optimal intersections of the Internet. Unlike most DNS providers, Comodo Secure DNS Directory Services Platform uses Anycast routing technology which means that no matter where you are located in the world, your DNS requests are answered by the closest available Comodo Secure DNS set of servers. Combine this with our huge cache and we can get the answers you seek faster and more reliably than anyone else. Furthermore, our "name cache invalidation" solution signals the Comodo Secure DNS recursive servers anytime one of our authoritative customers or partners updates a DNS record, fundamentally eliminating the concept of a TTL.
- Smarter Comodo's highly structured search and guide pages get you where you want to be, when you inadvertently
 attempt to go to a site that doesn't exist.
- Safer As a leading provider of computer security solutions, Comodo is keenly aware of the dangers that plague the
 Internet today. Secure DNS helps users keep safe online with its malware domain filtering feature. Secure DNS
 references a real-time block list (RBL) of harmful websites (i.e. phishing sites, malware sites, spyware sites, excessive
 advertising sites, etc.) and will warn you whenever you attempt to access a site containing potentially threatening
 content. Additionally, our 'name cache invalidation' solution signals the Comodo Secure DNS recursive servers
 whenever a DNS record is updated fundamentally eliminating the concept of a TTL. Directing your requests through
 highly secure servers can also reduce your exposure to the DNS Cache Poisoning attacks that may affect everybody
 else using your ISP.

To start Comodo Secure DNS service the DNS settings of your computer has to be modified to point to our server's IP addresses. Comodo Internet Security automatically modifies the DNS settings of your system during its installation to get the services. You can also modify the DNS settings of your system manually, if you haven't selected the option during installation. You can also revert to the previous settings if you want, at anytime.

Click the following links to get the instructions for manually modifying the DNS settings on your router or on your computer.

- Router
- Windows XP
- Windows 7/ Windows Vista

Router - Manually Enabling or Disabling Comodo Secure DNS Service

You can manually enable or disable Comodo Secure DNS service in your Router by modifying the DNS settings accessible

through DNS Server settings of your router. Comodo recommends making the change on your router so that with one change, all the computers on your network can benefit from Comodo Secure DNS.

To enable the Comodo Secure DNS service, modify the DNS server IP address settings to Comodo Secure DNS server IP addresses. The IP address are:

Primary DNS : 8.26.56.26 Secondary DNS : 8.20.247.20

To stop Comodo Secure DNS service

Modify the DNS server IP address to your previous settings.

To modify the DNS settings

1. Login to your router. To log in and configure your router, you can open it up in your web browser. If you don't know the IP address for your router, don't worry, it is typically one of the following:

http://192.168.0.1 http://192.168.1.1 http://192.168.10.1

If you have forgotten your router's username and/or password, the most common username is "admin" and the password is either blank, "admin", or "password". If none of those work, you can often reset the password to the manufacturer default by pressing a button on the router itself, or in some cases access without a password if you try to access your router quickly after you've cycled the power to it.

2. Find the DNS Server Settings. Look for "DNS" next to a field which allows two or three sets of numbers (these fields may be empty).

DNS AND ADVANCED SETT	INGS	
Use these DNS Servers :		
Primary DNS Server :		
Secondary DNS Server :		
Advanced >>		

 Select the check box Use these DNS Servers, type the Comodo Secure DNS Server settings as your DNS server settings and click 'Save'/'Apply'.

Primary DNS server address for Comodo Secure DNS is: 8.26.56.26

Secondary DNS server address for Comodo Secure DNS is: 8.20.247.20

When you are done, the above example would look like this.

DNS AND ADVANCED SETT	INGS	
Use these DNS Servers :	V	
Primary DNS Server :	8.26.56.26	
Secondary DNS Server :	8.20.247.20	
Advanced >>		

You can disable Comodo Secure DNS by:

Deselecting the check box 'Use these DNS servers' address automatically'. This means that you use the DNS server
provided by your ISP. This is the option that most home users should choose if they wish to disable the service.

or

Entering different preferred and alternate DNS server IP addresses.

Windows XP - Manually Enabling or Disabling Comodo Secure DNS Service

You can manually enable or disable Comodo Secure DNS service in your Windows XP computer by modifying the DNS settings accessible through Control Panel > Network Connections.

To enable the Comodo Secure DNS service, modify the DNS server IP address settings to Comodo Secure DNS server IP addresses. The IP address are:

Preferred DNS : 8.26.56.26

Alternate DNS : 8.20.247.20

To stop Comodo Secure DNS service

Modify the DNS server IP address to your previous settings.

To modify the DNS settings

1. Select the 'Control Panel' from the Start Menu.

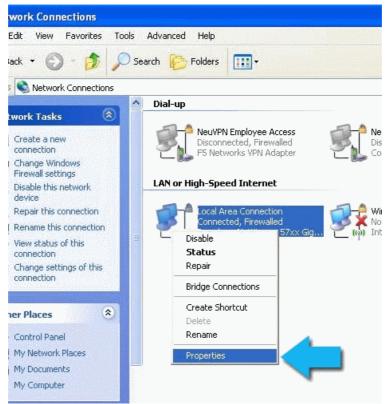

2. Click 'Network Connections' from the Control Panel options.

COMODO Creating Trust Online

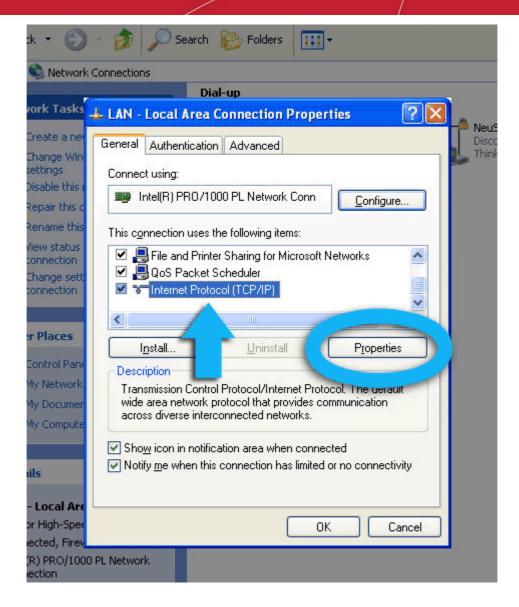

3. Right click on your connection from the Network Connections window and click 'Properties'.

4. Select 'Internet Protocol (TCP/IP)' and click 'Properties'.

COMODO Creating Trust Online*

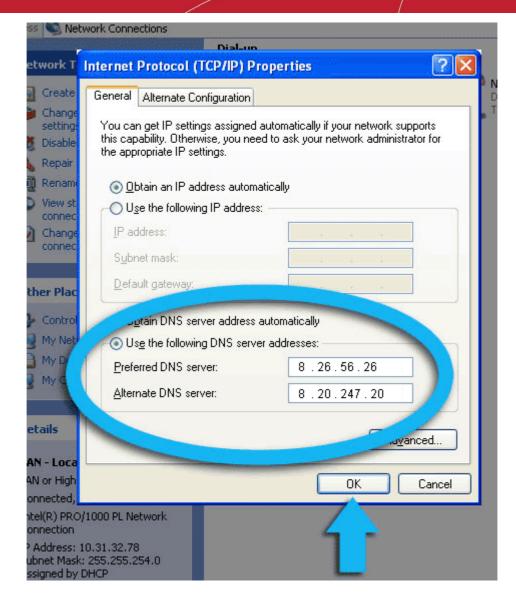

5. Click the radio button Use the following DNS server addresses and type in Comodo Secure DNS addresses in the Preferred DNS server and Alternate DNS server fields.

Please note down your current DNS settings before switching to Comodo Secure DNS, in case you want to return to your old settings for any reason.

Preferred DNS server address for Comodo Secure DNS is: 8.26.56.26

Alternate DNS server address for Comodo Secure DNS is: 8.20.247.20

COMODO Creating Trust Online*

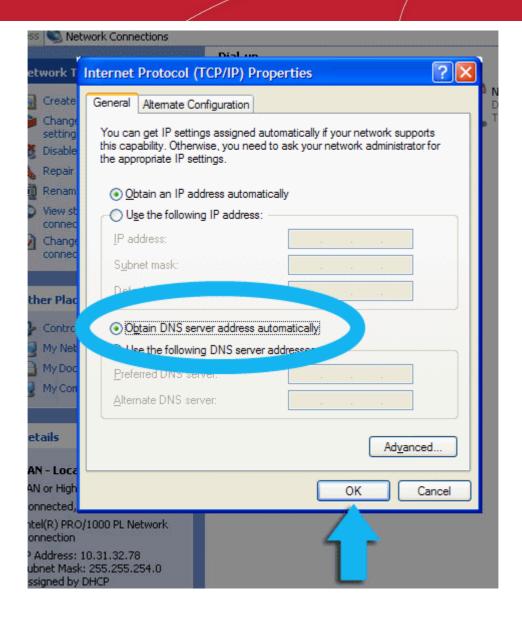

You can disable Comodo Secure DNS by:

• Selecting 'Obtain DNS server address automatically'. This means that you use the DNS server provided by your ISP. This is the option that most home users should choose if they wish to disable the service.

or

• Entering different preferred and alternate DNS server IP addresses.

COMODO Creating Trust Online

Windows 7 / Vista - Manually Enabling or Disabling Comodo Secure DNS Service

You can manually enable or disable the Comodo Secure DNS service by changing your DNS server addresses to:

• Preferred DNS : 8.26.56.26

•

Alternate DNS : 8.20.247.20

Enabling Comodo DNS in Windows 7 / Vista

Disabling Comodo DNS in Windows 7 / Vista

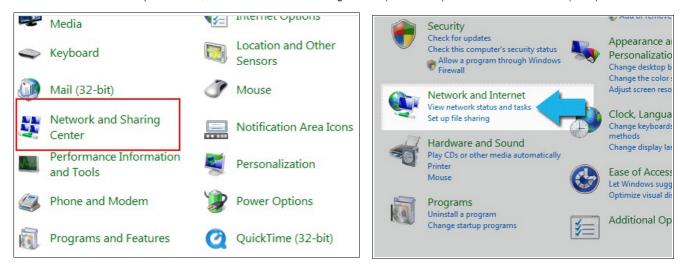

Enabling Comodo DNS in Windows 7 / Vista

1. Open the control panel by either selecting it from the Windows 'Start' menu or by typing 'control panel' into the search box then clicking the program name.

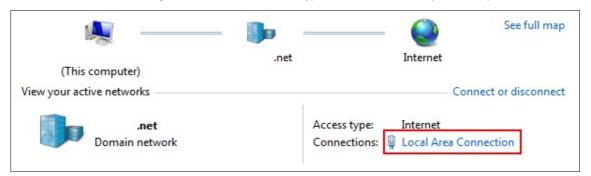

COMODO Creating Trust Online

Connect to a Projector	Network	
Kicky Notes	Control Panel	Programs (2)

Appendix 3 - Glossary Of Terms

A B C D E F G H I J K L M N O P Q R S U V W X Y Z

Α

ACK

The acknowledgment bit in a TCP packet. (ACKnowledgment code) - Code that communicates that a system is ready to receive data from a remote transmitting station, or code that acknowledges the error-free transmission of data.

Back to the top

Adware

Adware also known as advertising-supported application is designed as a tool to deliver advertisements that provides a source of revenue to its developer. The ads may appear on the screen during the installation process or on the user interface of the application. Since adware is mostly installed along with another software without the user's knowledge and may be used for malicious activities, the term 'adware' is often associated with malware.

Back to the top

Antivirus

An antivirus software is an application which is capable of detecting and removing malicious software such as viruses, trojans, worms and scripts from a computer system. A traditional (or 'classic') antivirus relies on a system of 'black-listed' signatures to detect malicious software. Under this system, antivirus vendors create digital signatures of any executable identified as malware. They then send this list of signatures to their customer's local antivirus software via regular (often daily) updates. The customer's antivirus software will then flag as a virus any program with a signature matching a signature on the blacklist.

One drawback with the signature system is its reactive nature – it can only detect 'known' threats. The vendor has to first identify the file as a virus before they can create a signature of it. In many cases, this means the virus has to have already infected someones computer before a signature can be created to combat it.

Because of this limitation, most modern anti-viruses now deploy a wide range of layered technologies to determine the threat level of a particular file. Such technologies include heuristics, behavior analysis, cloud-based scanning, sand-boxing, host intrusion prevention and file-look up services.

Antivirus Scan

An audit performed by an antivirus application in order to detect malware and viruses in the file system and/or memory of a computer.

ARP

Address Resolution Protocol (ARP) is a protocol for mapping an IP address to a physical machine address, also known as MAC address, in an Ethernet local area network.

Attached Resource Computer NETwork (ARCNET)

ARCNET is a local area network (LAN) protocol, similar in purpose to Ethernet or Token Ring. ARCNET was the first widely available networking system for microcomputers and became popular in the 1980s for office automation tasks. It has since gained a following in the embedded systems market, where certain features of the protocol are especially useful.

Back to the top

Auto-sandbox

Auto-sandboxing describes the process whereby applications and processes which are unknown to Comodo Internet Security will be automatically run in a isolated operating environment. Sandboxed applications are run under a set of access restrictions so they cannot cause damage the underlying file structure or operating system. The access restriction level applied to

Back to the top

Back to the top

Brute-force search is a trivial but very general problem-solving technique, that consists of systematically enumerating all possible candidates for the solution and checking whether each candidate satisfies the problem's statement.

Buffer Overflow

Brute-force

A buffer overflow is an anomalous condition where a process/executable attempts to store data beyond the boundaries of a fixed-length buffer. The result is that the extra data overwrites adjacent memory locations, often causing the process to crash or produce incorrect results. Hackers use buffer overflows as a trigger to execute to execute malicious code.

Error in a program that cause problems.

С

CA - Certification Authority

A Certificate Authority (CA) is trusted third party that validates ownership information about a web-server then issues an SSL/TLS certificate to the organization that owns the server. The certificate is then placed on the web-server and is used to secure connections between the server and any clients (browsers) that connect to it. For example, an online store would use a certificate to secure its order forms and payment pages.

A Certificate Authority (CA) such as Comodo CA will sign the certificates it issues with their private key. However, for the website's certificate to operate correctly, there is a reciprocal client side requirement - the internet browser that the visitor is using MUST physically contain the certificate authority's 'root certificate'. This root is required to successfully authenticate any website certificates that have been signed by the CA. If the root certificate is not embedded in a browser, then the website's certificate will not be trusted and visitors will see an error message. Certificate Authorities proactively supply browser vendors with their root certificates for inclusion in the browser's 'certificate store' - an internal repository of root certificates that ships with

sandboxed applications can be set by the user and includes 'Limited', 'Partially Limited', 'Restricted', 'Untrusted', 'Blocked' and 'Fully Virtualized'.

Conceptually, the auto-sandbox is designed to securely handle 'unknown' executables - those which are not present on Comodo's black-list (definitely malicious) or white-list (definitely safe). If the unknown file turns out to be malicious then it cannot cause any harm because the sand-boxing process denied it access to critical system resources. On the other hand, programs that are unknown but perfectly harmless will run just as well in the sandbox. This allows safe applications the freedom to run as intended while denying malicious applications the ability to cause damage.

The auto-sandbox process is further enhanced if it is married to a system that can subsequently classify these unknown files as either 'safe' or 'malicious'. In Comodo Internet Security, sandboxed files can be submitted to Comodo servers* for automated behavior analysis. If this analysis discovers the file is malicious then it is added to the black-list which is distributed to all CIS users. If the file does not exhibit malicious behavior it is passed to Comodo labs for more in-depth tests and possible inclusion on the white-list.

* if enabled by the user

Behavior Analysis

В

An activity performed by CIS to determine whether an unknown application in the sandbox is malicious or not. Unknown files are analyzed by Comodo Cloud Scanners and Comodo's Instant Malware Analysis (CIMA) servers. If found to be safe, they will be submitted to Comodo labs for further checks.

Behavior Blocker

A Host Intrusion Protection (HIPS) mechanism that monitors the behavior of software and files in your system and prevents them from taking actions that would cause damage.

each browser.

CIS Widget

The CIS Widget is a handy control panel that shows information about the security status of your computer, the speed of outgoing and incoming traffic and other useful information. The widget also has shortcuts to common CIS tasks and allows users to launch sandboxed instances of any internet browser they have installed on their system. By default, the widget is displayed on the desktops of Windows computers running CIS version 6.0 and above.

COM Interfaces

Component Object Model (COM) is Microsoft's object-oriented programming model that defines how objects interact within a single application or between applications - specifying how components work together and inter-operate. COM is used as the basis for Active X and OLE - two favorite targets of hackers and malicious programs to launch attacks on a computer. Comodo Internet Security automatically protects COM interfaces against modification.

Computer Network

the program and fixing the error.

D

Debugging

DHCP

A computer network is a connection between computers through a cable or some type of wireless connection. It enables users to share information and devices between computers and other users within the network.

Back to the top

Back to the top

Back to the top

Dynamic Host Configuration Protocol (DHCP) is a communications protocol that lets network administrators manage and automate the assignment of Internet Protocol (IP) addresses in an organization's network. DHCP allows devices to connect to a network and be automatically assigned an IP address.

The process of identifying a program error and the circumstances in which the error occurs, locating the source(s) of the error in

Back to the top

Digital Signature

Digital signatures are used for authentication and integrity, meaning it guarantees that the person sending a message is indeed the same person who he/she claims to be and the message has not been altered. To authenticate oneself using a digital signature, a person needs to download and install Digital Certificates in their systems from Certificate Authorities such as Comodo. The client certificate then can be imported into their browsers and email clients. The same certificate can also be used

Digital Certificate

A digital certificate is a file used to cryptographically bind a company's Public Key to its identity. Like a driving license or passport binds a photograph to personal information about its holder, a digital certificate binds a Public Key to information about that company. They are issued for between 1 and 5 year validity periods.

Digital certificates are issued by a Certificate Authority like Comodo. Each CA acts as a trusted third party and conducts background checks on a company to ensure they are legitimate before issuing a certificate to them. Apart from providing an encrypted connection between a internet browser and a website, digital certificates are intended to reassure website visitors that the company they are about to make a purchase from can be trusted.

To get a digital certificate, a company must first generate a Certificate Signing Request (CSR) on their web-server. This CSR contains their public key and their identity information. They then enroll and pay for the certificate and send their CSR to the CA.

The CA's validation department will check that the identity information in the CSR is correct by conducting background checks and will sometimes request that the company supplies documentation such as articles of incorporation. Once validation is satisfactorily completed, the CA will issue the certificate to the customer. The customer will then install it on their website to secure sensitive areas like payment pages.

Back to the top

to digitally sign a document before sending it. The recipient can easily find out if the document has been tampered with en-route.

Back to the top

DNS

DNS stands for Domain Name System. It is the part of the Internet infrastructure that translates a familiar domain name, such as 'example.com' to an IP address like 123.456.789.04. This is essential because the Internet routes messages to their destinations on the basis of this destination IP address, not the domain name. When a user searches for a website name like 'www.domain.com', their browser will first contact a DNS server to discover the IP address associated with that domain name. Once it has this information, it can successfully connect to the website in guestion.

Back to the top

Dynamic IP

The procedure of allocating temporary IP addresses as they are needed. Dynamic IP's are often, though not exclusively, used for dial-up modems.

Back to the top

Е

Encryption

Encryption is a technique that is used to make data unreadable and make it secure. Usually this is done by using secret keys and the encrypted data can be read only by using another set of secret keys. There are two types of encryption – symmetric encryption and asymmetric encryption.

Symmetric encryption is applying a secret key to a text to encrypt it and use the same key to decrypt it. The problem with this type of encryption lies during the exchange of secret keys between the sender and the recipient over a large network or the Internet. The secret keys might fall into wrong hands during the exchange process.

Asymmetric encryption overcomes this problem by using two cryptographically related keys, a key pair - a public key and a private key. The private key is kept secret in your system and the public key is made available freely to anyone who might want to exchange messages with you. Any message, be it text, documents or binary files that are encrypted using the public key can be decrypted using the corresponding private key only. Similarly anything that is encrypted using the private key can be decrypted using the corresponding public key. Typically public keys are made available to everyone by using Digital Certificates. The certificates are issued by a Certificate Authority (CA), which identifies a server or user and usually contains information such as the CA who issued it, the organization's name, email address of the user and country and the public key of the user. When a secure encrypted communication is required between a client and a server, a query is sent over to the other party for the certificate and the public key can be extracted from it.

Back to the top

End User

The person who uses a program after it's been compiled and distributed.

Back to the top

EPKI Manager

Enterprise Public Key Infrastructure Manager. The EPKI Manager allows you to issue bulk numbers of:

- · SSL Certificates for use on domain names owned by your Company;
- SecureEmail Certificates (S/MIME) for use by employees of your Company.

Your nominated EPKI Manager Administrator(s) will be able to manage all the company's Certificates from a central web based console. Additional certificates may be purchased through the console in minutes; ensuring new servers and employee email may be secured in minutes rather than days. For more information about EPKI Manager click **here**.

Back to the top

Ethernet

Ethernet is a frame-based computer networking technology for local area networks (LANs). The name comes from the physical concept of ether. It defines wiring and signaling for the physical layer, and frame formats and protocols for the media access control (MAC)/data link layer of the OSI model. Ethernet is mostly standardized as IEEEs 802.3. It has become the most widespread LAN technology in use during the 1990s to the present, and has largely replaced all other LAN standards such as token ring, **FDDI**, and **ARCNET**.

Executable Files

An 'executable' is a file that instructs a computer to perform a task or function. Every program, application and device run on computer requires an executable file of some kind to start it. The most recognizable type of executable file is the '.exe' file. For example, when Microsoft Word is started, the executable file 'winword.exe' instructs the computer to start and run the Word application. Other types of executable files include those with extensions .cpl .dll, .drv, .inf, .ocx, .pf, .scr, .sys.

Back to the top

Back to the top

Н

Heuristics

Heuristics is a technique that continuously evolves based on experience for solving problems, discovery and learning. When the term is used in computer security parlance, Heuristics is about detecting virus-like behavior or attributes rather than looking for a precise virus signature that match a signature on the virus blacklist. Comodo Internet Security applies this technology in the application, which is a guantum leap in the battle against malicious scripts and programs as it allows the engine to 'predict' the existence of new viruses - even if it is not contained in the current virus database.

Back to the top

HIPS

A Host Intrusion Protection System (HIPS) is designed to identify and block zero malware by monitoring the behavior of all applications and processes. It is designed to prevent actions that could cause damage to your operating system, systemmemory, registry keys or personal data.

Security software using a HIPS system will generally enforce rules prescribing the permitted activities of processes and executables at the point of execution. Examples of such activities can include changes to files or directories, accessing protected COM interfaces, modifications to the registry, starting up another application or writing to the memory space of another

False Positive

F

When an antivirus scan is run and the scanner reports that some programs are infected with malware which may not be the actual case and the files are safe. This kind of false alert is called 'False Positive'. Too much of False Postive results can be annoying and the user might just ignore legitimate warning or delete legitimate files causing the relevant program or operating system to malfunction.

Firewall

A firewall is an application that helps an user or administrator to have a control over how the system should be connected with other network/systems or over the Internet.

FS type

Type of file system.

FTP

File Transfer Protocol (FTP) is a protocol used for file transfer from computer to computer across a TCP network like the Internet. An anonymous FTP is a file transfer between locations that does not require users to identify themselves with a password or log-in. FTP uses the TCP/IP protocols to enable data transfer. FTP is most commonly used to download files from a server or to upload a file to a server.

G

Graphical User Interface (GUI)

The visual symbols and graphics with which a user controls a piece of software or device. Most software has a GUI that comprises of windows, menus, and toolbars. The user interacts with the GUI by clicking their mouse on a GUI element. Operating systems like Windows use GUI's because most users find them easier to use than less friendly interfaces like a command line.

application. The precise nature of these rules can be set by the user or pre-configured by the vendor.

If an executable or process attempts to perform an action that transgresses these rules then the HIPS system will block the attempt and generate an alert notifying the user of that action. Most HIPS alerts will also include security advice.

Back to the top

HTTP

L ICMP

HTTP (Hypertext Transfer Protocol) is the foundation protocol of the World Wide Web. It sets the rules for exchanges between browser and server. It provides for the transfer of hypertext and hypermedia, for recognition of file types, and other functions.

Back to the top

The Internet Control Message Protocol (ICMP) is part of Internet Protocol (IP) suite and used to report network applications communications errors, network congestion, timeouts and availability of remote hosts.

An Intrusion Detection System (IDS) is software/hardware that detects and logs inappropriate, incorrect, or anomalous activity. IDS are typically characterized based on the source of the data they monitor: host or network. A host-based IDS uses system log

Back to the top

files and other electronic audit data to identify suspicious activity. A network-based IDS uses a sensor to monitor packets on the

Back to the top

Back to the top

Back to the top

Back to the top

IMAP

IDS

Internet Message Access Protocol'. IMAP is a method of distributing email. It is different from the standard POP3 method in that with IMAP, email messages are stored on the server, while in POP3, the messages are transferred to the client's computer when they are read. Thus, using IMAP allows you to access your email from more than one machine, while POP3 does not. This is important because some email servers only work with some protocols.

Information Security Exposure

network to which it is attached.

An information security exposure is a mistake in software that allows access to information or capabilities that can be used by a hacker as a stepping-stone into a system or network.

Internet Service Provider (ISP)

A company or organization that provides the connection between a local computer or network, and the larger Internet.

IP - Internet Protocol

The Internet Protocol (IP) is a data-oriented protocol used by source and destination hosts for communicating data across a packet-switched network. An IP address is a numeric address that is used to identify a network interface on a specific network or subnetwork. Every computer or server on the Internet has an IP address. When a user types a domain name such as www.domain.com into the address bar of their browser, the browser still needs to find the IP address associated with that domain in order to reach the website. It finds the IP address by consulting with a DNS server.

There are currently two versions of IP in use today – IPv4 and Ipv6.

IPv4 (Internet Protocol version 4) was developed in 1981 and is still the most widely deployed version - accounting for almost all of today's Internet traffic. However, because IPv4 uses 32 bits for IP addresses, there is a physical upper limit of around 4.3 billion possible IP addresses - a figure widely viewed as inadequate to cope with the further expansion of the Internet. In simple terms, the number of devices requiring IP addresses is in danger of exceeding the number of IP addresses that are available.

IPv6 is intended to replace IPv4, which uses 128 bits per address (delivering 3.4×1038 unique addresses) and is viewed as the only realistic, long term solution to IP address exhaustion. IPv6 also implements numerous enhancements that are not present in IPv4 - including greater security, improved support for mobile devices and more efficient routing of data packets.

Κ

Key Logger

Key logger is a software application or a hardware device that keeps tracks of computer activity in real time including the keys that are pressed. Key loggers are used to troubleshoot technical problems in computer systems. The application can also be used for malicious purposes such as to steal passwords and other sensitive information.

Back to the top

L

LAN

A local area network (LAN) is a computer network covering a small local area, like a home, office, or small group of buildings such as a home, office, or college. Current LANs are most likely to be based on switched Ethernet or Wi-Fi technology running at 10, 100 or 1,000 Mbit/s (1,000 Mbit/s is also known as 1 Gbit/s).

Back to the top

Leak Test

Leak Test is a way to find out how well your system is protected by your security software from external and internal threats. Typically these tests are down-loadable and should not cause any harm to your system while being run. The Firewall Leak Tests are used to test how effective the firewall component of your security software is at detecting and blocking outgoing connection attempts. If an application is able to connect to the Internet without your knowledge, it poses a real danger meaning it can easily retrieve private and confidential information from your system and transmit it.

Host Intrusion Prevention System (HIPS) tests are designed to test how well your security software is capable of protecting your internal system from malicious attacks such as viruses. A good HIPS system will deny the malware from accessing your critical operating system files, registry keys, COM interfaces and running processes.

Back to the top

License

The official terms of use for a specific program. A software license is a legal document since it formally restricts the rights of the user.

Back to the top

М

MAC Address

A Media Access Control (MAC) address is a number that is hardwired in network adapters and is used to identify the device or system in which it is installed.

Every device on a network has two addresses: a MAC (Media Access Control) address and an IP (Internet Protocol) address. The MAC address is the address of the physical network interface card inside the device, and never changes for the life of the device (in other words, the network card inside the PC has a hard coded MAC address that it keeps even if installed it in a different machine). On the other hand, the IP address can change if the machine moves to another part of the network or the network uses DHCP to assign dynamic IP addresses. In order to correctly route a packet of data from a host to the destination network card it is essential to maintain a record of the correlation between a device's IP address and it's MAC address. The Address Resolution Protocol performs this function by matching an IP address to its appropriate MAC address (and vice versa). The ARP cache is a record of all the IP and MAC addresses that the computer has matched together.

Back to the top

Malicious File

Often called 'Malware', a malicious file is software designed to damage computer systems, steal sensitive information or gain unauthorized access to private computer systems. For example it may be coded to gather sensitive information from a system such as passwords, credit card details and send them back to the creator of the malware.

Back to the top

Malware

Malware is short for 'malicious software'. It is an umbrella term that describes a wide range of malicious software including viruses, trojans, worms, scripts and root kits. When installed on a computer system or network, malware can disrupt operations, steal sensitive and personal information, delete important data, create zombie networks and perform other destructive operations.

Ν

Network (computer)

Networking is the scientific and engineering discipline concerned with communication between computer systems. Such networks involves at least two computers, which can be separated by a few inches (e.g. via Bluetooth) or thousands of miles (e.g. via the Internet). Computer networking is sometimes considered a sub-discipline of telecommunications.

Network Zone

A Network Zone can consist of an individual machine (including a single home computer connected to Internet) or a network of thousands of machines to which access can be granted or denied. The creation of network zones helps an administrator to apply changes for all the computer(s) in selected zone(s).

NIDS

NIDS - Network-Based Intrusion Detection System. Detects intrusions based upon suspicious network traffic. A network intrusion detection system (NIDS) is a system that tries to detect malicious activity such as denial of service attacks, port-scans or even attempts to crack into computers by monitoring network traffic.

Comodo Internet Security 6.3 - User Guide

Plugin

A program that allows a Web browser to display a wider range of content than originally intended. For example: the Flash plugin allows Web browsers to display Flash content.

POP2

There are two versions of POP. The first, called POP2, became a standard in the mid-80's and requires SMTP to send messages. The newer version, POP3, can be used with or without SMTP.

POP3

POP3 is the abbreviation for Post Office Protocol - a data format for delivery of emails across the Internet.

Ports

A computer port is an interface that allows communication between applications or processes running on a host computer and other computers, devices or networks.

Your computer sends and receives data to other computers and to the Internet through a port. There are over 65,000 numbered ports on every computer - with certain ports being traditionally reserved for certain services. For example, your machine almost definitely connects to Internet using port 80 and port 443. Your e-mail application connects to your mail server through port 25.

Potentially Unwanted Applications

A potentially unwanted application (PUA) is a piece of software that (i) a user may or may not be aware is installed on their computer, and/or (ii) may have functionality and objectives that are not clear to the user. Example PUA's include adware and browser toolbars. PUA's are often installed as an additional extra when the user is installing an unrelated piece of software. Unlike malware, many PUA's are 'legitimate' pieces of software with their own EULA agreements. However, the 'true' functionality of the software might not have been made clear to the end-user at the time of installation. For example, a browser toolbar may also contain code that tracks a user's activity on the Internet. Because of this ambiguity, many antivirus companies use the term 'Potentially Unwanted Application' to identify such software.

Q

Quarantined Files

After an antivirus scan, files that are detected as malware may either be deleted immediately or isolated in a secure environment known as 'quarantine'. Any files moved into quarantine are encrypted so they cannot be run or executed. This prevents infected files from corrupting the rest of a computer.

R

Registry Keys

The Windows Registry serves as an archive for collecting and storing the configuration settings of all computer hardware, software and Windows components. Every time an application or hardware is started, it will access the registry keys relating to it. Applications will also access and modify their registry keys constantly during the course of their execution. As the registry is one of the most regularly accessed parts of Windows, it plays a critical role in the stability, reliability and performance of a computer. Indeed, many computer problems are caused by registry errors. Corrupt keys and invalid keys left by uninstalled applications can often cause severe degradation in system performance, crashes and, in extreme cases, can render a system un-bootable. Inexperienced users are, however, discouraged from making manual adjustments to the registry because a single change can have potentially devastating consequences. There are several dedicated registry cleaners available today, including **Comodo PC TuneUp**.

encapsulated in MIME.

Single User Certificate

A single use certificate refers to the x.509 and associated private key generated by SecureEmail on Alice; stored on SES and downloaded by Bob after a successful SSL client authentication.

Back to the top

SMB

A message format used by DOS and Windows to share files, directories and devices, NetBIOS is based on the SMB format, and many network products use SMB. These SMB-based networks include Lan Manager, Windows for Workgroups, Windows NT, and Lan Server. There are also a number of products that use SMB to enable file sharing among different operating system platforms.

SMTP

SNMP

Simple Mail Transfer Protocol is the most widely used standard for email transmission across the Internet. SMTP is a relatively simple, text-based protocol, where one or more recipients of a message are specified (and in most cases verified to exist) and then the message text is transferred.

Simple Network Management Protocol. The network management protocol used almost exclusively in TCP/IP networks. SNMP provides a means to monitor and control network devices, and to manage configurations, statistics collection, performance, and

Spyware

security.

Spyware is a program that performs certain actions without the consent of the user such as displaying advertisements, collecting personal and sensitive information and changing the configuration of the computer. Not all tracking software are malicious since you may have agreed to the conditions as a trade-off for obtaining certain services for free. The tracking software will monitor your online activities to decide what kind of ads should be shown for you.

Back to the top

SSL

Secure Sockets Layer (SSL) is a commonly used protocol for ensuring secure message transmission on the internet. It facilitates an encrypted connection between a web server and an internet browser. It was developed by Netscape in 1994 as a direct response to growing concerns over internet security.

The encryption provided by SSL means that all data passed between a web server and a browser is private and cannot be eavesdropped on. You can tell if you are in an SSL session if the URL begins with https.

Port Stealthing is a security technique whereby ports on an Internet connected PC are hidden so that they provide no response

A computer sends and receives data to other computers and to the Internet through an interface called a port. There are over 65,000 numbered ports on every computer - with certain ports being traditionally reserved for certain services. For example, most computers connect to the internet using ports 80 and port 443. Most e-mail applications connect to their mail server through port 25. A 'port scanning' attack consists of sending a message to each port to find out which are open and which are

SSL is used on the payment pages of millions of websites to protect their online transactions with their customers.

being used by services. With this knowledge, a hacker can determine which attacks are likely to work against a particular computer. Port stealthing effectively makes it invisible to a port scan. This differs from simply 'closing' a port as NO response is given to any connection attempt ('closed' ports respond with a 'closed' reply- revealing to the hacker that there is actually a PC in existence).

Back to the top

Stateful Packet Inspection

Stateful Packet Inspection, also known as SPI, is an enhanced firewall technique that uses dynamic packet filtering method over the older method of static packet filtering. SPI scrutinizes the packet contents, monitors traffic and keeps track of the sources of packets. A network administrator can configure the firewall that uses SPI according to the needs of the organization, for example, close ports until requested by legitimate users to open them.

Back to the top

SYN

SYN (synchronize) is a type of packet used by the Transmission Control Protocol (TCP) when initiating a new connection to synchronize the sequence numbers on two connecting computers. The SYN is acknowledged by a SYN/ACK by the responding computer.

Back to the top

Т

TCP

TCP stands for Transmission Control Protocol. TCP is one of the main protocols in TCP/IP networks. Whereas the IP protocol deals only with packets, TCP enables two hosts to establish a connection and exchange streams of data. TCP guarantees delivery of data and also guarantees that packets will be delivered in the same order in which they were sent.

Token-Ring

LAN technology was developed and promoted by IBM in the early 1980s and standardized as IEEE 802.5 by the Institute of Electrical and Electronics Engineers. Initially very successful, it went into steep decline after the introduction of 10BASE-T for Ethernet and the EIA/TIA 568 cabling standard in the early 1990s. A fierce marketing effort led by IBM sought to claim better performance and reliability over Ethernet for critical applications due to its deterministic access method, but was no more successful than similar battles in the same era over their Micro Channel architecture. IBM no longer uses or promotes Token-Ring. Madge Networks, a one time competitor to IBM, is now considered to be the market leader in Token Ring.

Back to the top

Trojan

A Trojan is a type of malware that looks like a legitimate piece of software and users are tricked to install and execute in their computers. The malware takes the name from the Greek mythology, Trojan Horse, a wooden horse that was used by the Greeks to infiltrate the city of Troy. Once the malware is activated, it can damage the system, spread other computer viruses and also create a back door so as to allow online fraudsters to take access or control the system.

Trusted Files

In Comodo Internet Security, a trusted file is one that is considered safe and is allowed to run on a user's computer. This type of file can also be referred to as a 'safe' file or a 'white-listed' file.

A file will be treated as safe if it is in the 'Trusted Files' list OR if it is digitally signed by a 'Trusted Software Vendor'. Comodo Internet Security ships with a list of trusted files and a list of Trusted Vendors. Users can add their own trusted files and vendors to their local installation. They can also submit files and vendors to Comodo so they can be considered for inclusion in future safe lists.

Back to the top

Trusted Software Vendor

A Trusted Software Vendor (TSV) is a publisher of software that is automatically trusted by Comodo Internet Security software. Executable files that have been digitally signed by a TSV will be allowed to run normally and will not be placed in the sandbox.

Many software vendors digitally sign their software with a code signing certificate. Digitally signed software helps a user to identify the publisher and to be sure that the software he/she is downloading is genuine and has not been tampered with. Each code signing certificate is counter-signed by a trusted certificate authority (CA) after the CA has conducted detailed checks that the vendor is a legitimate company.

U

User

A person who uses a computer, including a programmer or end user.

۷

Virtual Kiosk

The Virtual Kiosk is a standalone sandbox featured in Comodo Internet Security which allows users to run any applications in a completely virtual environment. Software in the kiosk will not affect other processes, programs or data on the user's computer. Similarly, internet browsers running in the kiosk leave behind no personally identifying cookies or history on an employee's real system. The kiosk also features a virtual keyboard which provides additional security when entering usernames and passwords on website login pages. Although the kiosk is primarily intended for users to test unknown or beta software and for launching highly secure browsing sessions, it can be used to run most software. The kiosk interface is available in both desktop and tablet optimized versions.

Back to the top

Virtual Machine (VM)

Virtual machine is a software application that emulates a computing environment in which a program or an operating system can be installed and run. There are many advantages in using a VM such as for testing out new applications or procedures without affecting the host system.

Back to the top

Virus

A computer virus is an executable application capable of causing damage to computer files, folders and components. Viruses are also capable of self-replication so can infect multiple items on a system if left unchecked. The malicious activities performed by a virus are wide ranging and include stealing confidential information, modifying user data, overwriting or damaging files and erasing hard disk content.

Back to the top

Virus Database

A database of the digital signatures of all known computer viruses and malware. This database, sometimes referred to as a 'black list', enables antivirus software to detect any malware running on a customer's computer.

Every time a file or executable is identified as being malware, antivirus companies will create a digital signature of the file and add it to their database of blacklisted files. This database is then distributed to their customers as an update to their antivirus software. If the blacklisted signature of the malware is found anywhere on a customers computer, then the file is flagged as infected and may be guarantined or deleted.

Comodo has a dedicated team of technicians and crawlers that are continually searching for new virus strains to add to our database. Comodo's virus database is available for public download at http://internetsecurity.comodo.com/updates/vdp/database.php

Vulnerability

In network security, a vulnerability refers to any flaw or weakness in the network defense that could be exploited to gain unauthorized access to, damage or otherwise affect the network.

COMODO Creating Trust Online*

W

Web server

The term Web server can mean one of two things:

1. A computer that is responsible for accepting HTTP requests from clients, which are known as Web browsers, and serving them Web pages, which are usually HTML documents and linked objects (images, etc.).

2. A computer program that provides the functionality described in the first sense of the term.

Back to the top

Worm

A Worm, another type of malware, unlike virus is capable of spreading from computer to computer without any human help. The worm with its capability to replicate itself several times over consumes most of the system memory causing the computer to slow down or crash altogether. It can also cause bandwidth jam while spreading to other computers in the network.

Back to the top

Wildcard

Wildcards are symbols that add flexibility to a keyword search by extending the parameters of a search word. A wildcard item is usually denoted with the asterisk symbol, '*'. This stands for one-or-more characters (useful for all suffixes or prefixes). In digital certification terms, a 'wildcard certificate' means that the certificate will secure the domain plus unlimited sub-domains of that domain. A wildcard certificate is applied for using the format '*.domain.com'.

Zero-day malware describes new computer viruses or worms that have been discovered in the public realm but which antivirus vendors have not yet created a digital signature for. The term means that the antivirus companies have had 'zero-days' to react. New malware can reasonably be called 'zero-day' for the the length of time between its discovery and the creation of a signature to combat it. For most antivirus vendors, this is usually measured in a matter of hours. Of course, the malware itself may have been at large for a much longer period of time before it was discovered. Because of this window of vulnerability, most security software has grown beyond a reliance on traditional, signature based detection. Most antivirus software now contains layers of prevention-based technologies intended to detect and neutralize 'unknown' malware until such time as a signature can be created. Example technologies include heuristic detection, host intrusion prevention (HIPS), automatic sandboxing and real-time

About Comodo

The Comodo companies are leading global providers of Security, Identity and Trust Assurance services on the Internet. Comodo CA offers a comprehensive array of PKI Digital Certificates and Management Services, Identity and Content Authentication (Two-Factor - Multi-Factor) software, and Network Vulnerability Scanning and PCI compliance solutions. In addition, with over 10,000,000 installations of its threat prevention products, Comodo Security Solutions maintains an extensive suite of endpoint security software and services for businesses and consumers.

Continual innovation, a core competence in PKI and a commitment to reversing the growth of Internet-crime distinguish the Comodo companies as vital players in the Internet's ongoing development. Comodo, with offices in the US, UK, China, India, Romania and the Ukraine, secures and authenticates the online transactions and communications for over 200,000 business customers and millions of consumers, providing the intelligent security, authentication and assurance services necessary for trust in on-line transactions.
